

Content	Page
1. STRUCTURE OF MATTER	7
1.1 Force interactions	7
1.2 Energy	7
1.3 Quantum effects	8
1.3.1 Quantum numbers	10
1.4 Elementary particles	12
1.5 Hydrogen atom	12
1.5.1 Spectrum of hydrogen atom	14
1.6 Electron structure of heavy atoms	15
1.7 Excitation and ionisation of atom	16
1.7.1 Binding energy of electron in atom	17
1.8 Atomic nucleus	18
1.8.1 Binding energy of nucleus	18
1.8.2 Magnetic properties of nuclei	19
1.9 Forces acting among atoms	20
1.9.1 Ion bond	20
1.9.2 Covalent bond	20
1.10 Physical basis of nuclear magnetic resonance	21
1.11 Principle of mass spectroscopy	25
2. MOLECULAR BIOPHYSICS	27
2.1 Bonds	27
2.2 Phases of matter	27
2.2.1 Gaseous phase	28
2.2.1.1 The ideal gas law	28
2.2.1.2 The Maxwell-Boltzmann distribution	28
2.2.1.3 Theorem of the equipartition of energy	29
2.2.1.4 Real gases	29
2.2.2 Liquid phase	30
2.2.3 Solids	30
2.3 Change of phases	30
2.3.1 Phase diagram	31
2.3.2 Gibbs law of phases	31
2.4 Classification of dispersion system	32
2.4.1 Analytical dispersions	32
2.4.2 Colloidal dispersions	34
2.4.2.1 Electric double-layer of colloidal particles	35
2.5 Water	36
2.6 Transport phenomena	37
2.6.1 Basic laws of fluids	37
2.6.2 The law of Laplace	38
2.6.3 Viscosity	38
2.6.4 The Hagen-Poiseuille law	39
2.6.5 Stokes law	39
2.6.6 Diffusion	40
2.7 Colligative properties of solutions	41
2.7.1 Raoult laws	41
2.7.2 Osmotic pressure	42

3. THERMODYNAMICS	43
3.1 Thermodynamic system	43
3.2 Work and heat	44
3.4 Heat transport	46
3.5 Functions of state	46
3.5.1 Internal energy	47
3.5.2 Enthalpy	47
3.5.3 Entropy	48
3.5.4 Free energy	49
3.5.5 Free enthalpy	50
3.6 Chemical potential	50
3.7 Reaction heat	50
3.8 Thermodynamics of biological system	51
3.9 Transformation and accumulation of energy in biological system	52
3.10 Calorimetry	53
3.11 Thermal losses	54
3.12 The laws of thermodynamics	54
4. BIOPHYSICS OF ELECTRIC PHENOMENA	56
4.1 Introduction	56
4.1.1 Coulomb law and permittivity	56
4.1.2 Electric potential, potentials of phase boundary-lines	57
4.1.3 Donnan equilibrium	59
4.2 Electric phenomena in alive organism	60
4.2.1 Resting membrane potential of nerve cell	60
4.2.2 Action potential of nerve fibre	61
4.3 Electric current	63
4.3.1 Conduction of electric current in organism	63
4.3.2 Effect of electric current on organism	65
4.3.3 Conductometry	66
4.4 Oscilloscope	67
5. ACOUSTICS AND PHYSICAL PRINCIPLES OF HEARING	69
5.1 Introduction	69
5.1.1 Basic quantities	69
5.1.2 Doppler's effect	72
5.1.3 Weber-Fechner's law	72
5.1.4 Complex tones	73
5.2 The principles of hearing	74
5.3 Ultrasound	75
5.5 Shock waves	77
6. OPTICS	78
6.1 Propagation of light	78
6.1.1 Electromagnetic waves	78
6.2 Ray optics	79
6.3 Dispersion of light	80

6.3.1 Rayleigh scattering	81
6.3.2 Raman scattering	81
6.4 Absorption of light	82
6.5 Polarization of light	82
6.6 Quantum optics	84
6.7 Wave optics	84
6.7.1 Interference of light	84
6.7.2 Diffraction of light	85
6.8 Lenses	86
6.8.1 The compound microscope	87
6.9 Optics of human eye	89
6.9.1 Eye defects	90
6.9.2 Biophysics of vision	90
6.10 Laser	92
 7. X-RAY PHYSICS AND MEDICAL APPLICATION	 93
7.1 General features of X -rays	93
7.1.1 Production of bremsstrahlung	93
7.1.2 Production of characteristic X -rays	94
7.1.3 The attenuation of X -radiation	95
7.1.3.1 The photoelectric effect	95
7.1.3.2 Compton scattering.	96
7.1.4 X -ray contrast	96
7.2 Use of X -rays for diagnostic purposes	97
7.3 Therapeutic application of X -rays	98
 8. RADIOACTIVITY AND IONIZING RADIATION	 100
8.1 Natural and artificial radioactivity	100
8.1.1 Basic law of radioactive decay	100
8.1.2 Radioactive equilibrium	102
8.1.3 Radioactive series	103
8.1.4 Types of radioactive decay	104
8.1.4.1 α -decay	104
8.1.4.2 β -decay	105
8.1.4.3 Nuclear isomers	106
8.1.4.4 Spontaneous fission	106
8.2 Ionizing radiation and its sources	106
8.2.1 Particles with positive charge	106
8.2.2 Linear accelerators	106
8.2.3 Circular accelerators	107
8.2.4 Negatively charged particles – electrons	107
8.2.5 Neutrons	108
8.2.6 Radionuclide sources of neutrons	108
8.2.7 γ -Radiation	108
8.2.8 Cosmic rays	109
8.3 Interaction of radiation with matter	109
8.3.1 Interaction of α -particles	110
8.3.2 Interaction of β -radiation	110
8.3.3 Interaction of γ -radiation	111

8.3.3.1 Photoelectric effect	111
8.3.3.2 Compton scattering	112
8.3.3.3 Electron-positron pairs	112
8.3.4 Interaction of neutrons	113
8.4 Detection of ionizing radiation	115
8.4.1 Ionisation chambers	115
8.4.2 Geiger - Müller counter	116
8.4.3 Scintillation counter	116
8.4.3.1 Integral and selective detection of γ -radiation	117
8.5 Basic quantities in radiation dosimetry	118
8.5.1 Personal dosimeters	119
