

TABLE OF CONTENTS

PREFACE.....	6
I. INFORMATION BASE	7
1.1 Data for agrozone	8
1.2 General economic data.....	8
1.3 Interpretation and Evaluation of Data.....	9
1.3.1 Cropping patterns	9
1.3.2 Cropping Calendar.....	9
1.4 Estimating Labour and Power Requirements	10
1.4.1 Determination of peak power demands.....	10
1.4.2 Estimation of labour or power requirements.....	11
II. POWER FOR AGRICULTURAL PRODUCTION.....	13
2.1 Hand Power.....	13
2.2 Draught Animal Power.....	14
2.2.1 Characteristics of draught animals.....	14
2.2.2 Choice of breed and individual.....	15
2.2.3 Utilization and work to be done.....	16
2.2.4 Energy inputs, power outputs.....	17
2.2.5 Harnesses	19
2.2.6 Implements for Draught Animals.....	19
2.2.6 Control of Implements.....	20
2.2.7 Animal Housing.....	21
2.2.8 Animal health.....	22
2.3 Mechanical Power.....	23
2.3.1 Characteristics of Engines and Power Transmission.....	23
2.3.2 Performance characteristics of engines	23
2.3.2.1 Temperature and altitude effects.....	24
2.3.2.2 Fuel consumption.....	25
2.3.3 Power Transmission	26
2.3.4 Power Unit Utilization.....	28
2.3.4.1 Power	28
2.3.4.2 Transmitting Energy.....	31
2.3.5 Performance of the Agricultural Tractor.....	32
2.3.6 Soil strength.....	34
2.3.7 Ideal maximum thrust.....	35
2.3.8 Thrust/slip relationship.....	36
2.3.9 Drawbar pull	37
2.4.0 Rolling resistance	38
2.4.1 Tractor Power	38
2.4.2 Operating on a slope.....	39
2.4.2 Power requirement	41
2.4.3 Connecting Tractor and Implement.....	42
2.4.3.1 Pull-type, semi-mounted, or mounted.....	1
2.4.3.2 Hitch point.....	43
2.4.4 Load transfer due to pull	44
III. MACHINE CAPACITY.....	45
3.1. MACHINE CAPACITY MEASURING METHODS.....	45
3.1.1 Field capacity:.....	46
3.1.2 Material capacity.....	46
3.1.3 Throughput capacity:.....	46
IV. IMPROVING FIELD EFFICIENCY	51
4.1. Unused capacity	51
4.1.2 Material Handling Procedures	53
4.1.3. Coordinating Multiple Activities	54
4.1.4. Turning Time and Field Conditions	54

4.1.5. Unclogging machines and making adjustments	56
4.1.6 Reducing Breakdowns	56
4.1.7 Rest stops, Changing operators and Checking field performance	57
4.1.8 Operator safety	58
V. MATCHING MACHINES AND WORK	60
5.1 Estimating Effective Field capacity	60
5.1.1 Estimating Field Capacity	60
5.1.2 Matching machine size and capacity to time	62
5.2 Estimating power requirements	63
5.2.1 Engine types	64
5.2.2 Power ratings	64
5.3 Machine soil resistance	65
VI. CALCULATION OF COSTS OF OPERATING FARM MACHINE	68
6.1 Fixed costs and running costs	68
6.1.2 Estimating total fixed costs	76
6.1.3 Reduction of fixed costs	78
6.1.4 Proper amount of equipment	79
6.1.5 Longer ownership of machinery	79
6.1.6 Buying second-hand equipment	79
6.2 Fuel and lubricant costs	80
6.3 Maintenance and repair of machines	82
6.3.1. Routine maintenance and replacement of wearing parts	83
6.3.2 Repair of accidental damage	84
6.3.3 Repairs though operator neglect	84
6.3.5 Routine overhauls	84
6.4 Establishing life of the equipment	85
6.5 Estimating repair costs	85
6.6 Indirect machinery costs	88
6.7 Labour costs	91
VII. ASSESSMENT OF MACHINERY REPLACEMENT NEEDS AND COSTS	93
7.1 Establishing when to replace equipment	93
7.1.1 Establishing replacement Guidelines	93
7.2 Factors affecting tractor choice	97
7.3 Future needs	99
7.4 Allowing for expansion	102
7.5 Selecting machine size	102
7.6 Ways of obtaining machinery	105
7.7 Comparing alternatives	107
VIII. CHOICE OF MECHANISATION ALTERNATIVES	111
8.1 Machinery rings	111
8.2 When to hire	112
8.3 Contracting costs	115
IX. SELECTING MACHINERY FOR FIELD OPERATIONS	119
9.1 Jobs to be carried out	119
9.1.1 Analysis of cropping systems and tasks to be performed	119
9.1.2 Estimating work rate	119
9.1.3 Selection of power source	119
9.1.4 Determine the annual cost	120
9.2 Preliminary Selection and Costing	120
9.2.1 Specification of Farming System (s)	120
9.2.2 The selection procedure:	122
9.2.2.1 Work rates for field machinery	122
9.3 Final Selection and Costing	123
9.3.1 Estimating required work rates	123
9.3.2 Calculating Work Rates of Field Machinery	123
