Contents

Introduction 1
Parabolic equations 4

Chapter 1 Multiplier estimates 17
1.1 Anisotropic dilations 17
1.2 Homogeneity 18
1.3 Quasi-norms 20
1.4 Products and inverses 23
1.5 Resolvent estimates for symbols 25
1.6 Multiplier spaces 29

Chapter 2 Anisotropic Banach scales 31
2.1 Admissible Banach spaces 31
2.2 Parameter-dependence and resolvent estimates 34
2.3 Fractional power scales 38

Chapter 3 Fourier multipliers and function spaces 43
3.1 Marcinkiewicz type multiplier theorems 43
3.2 Dyadic decompositions and Fourier multipliers 46
3.3 Besov spaces 49
3.4 Fourier multipliers in Besov spaces 53
3.5 Anisotropic Sobolev and Hölder spaces 54
3.6 Renorming theorems 56
3.7 Bessel potential spaces 62
3.8 Sobolev–Slobodeckii and Nikol'skiĭ scales 65
3.9 Hölder scales 68

Chapter 4 Distributions on half-spaces and corners 71
4.1 Restrictions and extensions of smooth functions 71
4.2 Distributions on half-spaces 76
4.3 Corners 82
4.4 Function spaces on corners 86
4.5 Traces on half-spaces 91
4.6 Higher order traces on half-spaces 93
4.7 Vanishing traces 97
4.8 Normal boundary operators on half-spaces 101
4.9 Interpolation with boundary conditions 107
4.10 Traces on half-open wedges 113

4.11 Traces on closed wedges 118
4.12 Vanishing traces on closed wedges 122
4.13 The structure of wedge spaces 125
4.14 Parameter-dependent function spaces 131

Bibliography 137
