Preface vii

Tetsuro Miyakawa (1948–2009) ix

Part 1. The rugosity effect
Dorin Bucur 1

Chapter 1. Some classical examples 5
1. Introduction 5
2. The example of Cioranescu and Murat: a strange term coming from somewhere else 5
3. Babuška's paradox 6
4. The Courant–Hilbert example for the Neumann–Laplacian spectrum 8
5. The rugosity effect 8

Chapter 2. Variational analysis of the rugosity effect 11
1. Scalar elliptic equations with Dirichlet boundary conditions 11
2. The rugosity effect in fluid dynamics 16

Bibliography 23

Part 2. Nonlinear evolution equations with anomalous diffusion
Grzegorz Karch 25

Chapter 1. Lévy operator 29
1. Probabilistic motivations – Wiener and Lévy processes 29
2. Convolution semigroup of measures and Lévy operator 31
3. Fractional Laplacian 35
4. Maximum principle 36
5. Integration by parts and the Lévy operator 39

Chapter 2. Fractal Burgers equation 45
1. Statement of the problem 45
2. Viscous conservation laws and rarefaction waves 46
3. Existence o solutions 47
4. Decay estimates 48
5. Convergence toward rarefaction waves for $\alpha \in (1, 2)$ 49
6. Self-similar solution for $\alpha = 1$ 50
7. Linear asymptotics for $0 < \alpha < 1$ 51

8. Probabilistic summary 52

Chapter 3. Fractal Hamilton–Jacobi–KPZ equations 53
1. Kardar, Parisi & Zhang and Lévy operators 53
2. Assumptions and preliminary results 54
3. Large time asymptotics – the deposition case 56
4. Large time asymptotics – the evaporation case 58

Chapter 4. Other equations with Lévy operator 59
1. Lévy conservation laws 59
2. Nonlocal equation in dislocation dynamics 61

Bibliography 65

Part 3. On a continuous deconvolution equation
ROGER LEWANDOWSKI 69

Chapter 1. Introduction and main facts 73
1. General orientation 73
2. Towards the models 74
3. Approximate deconvolution models 75
4. The deconvolution equation and outline of the remainder 76

Chapter 2. Mathematical tools 79
1. General background 79
2. Basic Helmholtz filtration 80

Chapter 3. From discrete to continuous deconvolution operator 83
1. The van Cittert algorithm 83
2. The continuous deconvolution equation 84
3. Various properties of the deconvolution equation 85
4. An additional convergence result 86

Chapter 4. Application to the Navier–Stokes equations 89
1. Dissipative solutions to the Navier–Stokes equations 89
2. The deconvolution model 91

Bibliography 101

Part 4. Rough boundaries and wall laws
ANDRO MIKELIĆ 103

Chapter 1. Rough boundaries and wall laws 107
1. Introduction 107
2. Wall law for Poisson's equation with the homogeneous Dirichlet condition at the rough boundary 108
3. Wall laws for the Stokes and Navier–Stokes equations 120
4. Rough boundaries and drag minimization 129

Bibliography 131

Part 5. Hyperbolic problems with characteristic boundary
PAOLO SECCHI, ALESSANDRO MORANDO, PAOLA TREBESCHI 135

Chapter 1. Introduction 139
1. Characteristic IBVP's of symmetric hyperbolic systems 139
2. Known results 142
3. Characteristic free boundary problems 143

Chapter 2. Compressible vortex sheets 149
1. The nonlinear equations in a fixed domain 152
2. The L^2 energy estimate for the linearized problem 154
3. Proof of the L^2-energy estimate 156
4. Tame estimate in Sobolev norms 158
5. The Nash–Moser iterative scheme 160

Chapter 3. An example of loss of normal regularity 167
1. A toy model 167
2. Two for one 169
3. Modified toy model 171

Chapter 4. Regularity for characteristic symmetric IBVP's 175
1. Problem of regularity and main result 175
2. Function spaces 178
3. The scheme of the proof of Theorem 4.1 180

Bibliography 191

Appendix A. The Projector P 195

Appendix B. Kreiss-Lopatinskiĭ condition 197

Appendix C. Structural assumptions for well-posedness 199

Contents

Chapter 1. Some classical examples 5
1. Introduction 5
2. The example of Cioranescu and Murat: a strange term coming from somewhere else 5
3. Babuška's paradox 6
4. The Courant–Hilbert example for the Neumann–Laplacian spectrum 8
5. The rugosity effect 8

Chapter 2. Variational analysis of the rugosity effect 11
1. Scalar elliptic equations with Dirichlet boundary conditions 11
2. The rugosity effect in fluid dynamics 16
2.1. The vector case: in a scalar setting... 16
2.2. The Stokes equation 16

Bibliography 23

Contents

Chapter 1. Lévy operator 29
1. Probabilistic motivations – Wiener and Lévy processes 29
2. Convolution semigroup of measures and Lévy operator 31
3. Fractional Laplacian 35
4. Maximum principle 36
5. Integration by parts and the Lévy operator 39

Chapter 2. Fractal Burgers equation 45
1. Statement of the problem 45
2. Viscous conservation laws and rarefaction waves 46
3. Existence o solutions 47
4. Decay estimates 48
5. Convergence toward rarefaction waves for $\alpha \in (1,2)$ 49
6. Self-similar solution for $\alpha = 1$ 50
7. Linear asymptotics for $0 < \alpha < 1$ 51
8. Probabilistic summary 52

Chapter 3. Fractal Hamilton–Jacobi–KPZ equations 53
1. Kardar, Parisi & Zhang and Lévy operators 53
2. Assumptions and preliminary results 54
3. Large time asymptotics – the deposition case 56
4. Large time asymptotics – the evaporation case 58

Chapter 4. Other equations with Lévy operator 59
1. Lévy conservation laws 59
2. Nonlocal equation in dislocation dynamics 61

Bibliography 65

Contents

Chapter 1. Introduction and main facts 73
1. General orientation 73
2. Towards the models 74
3. Approximate deconvolution models 75
4. The deconvolution equation and outline of the remainder 76

Chapter 2. Mathematical tools 79
1. General background 79
2. Basic Helmholtz filtration 80

Chapter 3. From discrete to continuous deconvolution operator 83
1. The van Cittert algorithm 83
2. The continuous deconvolution equation 84
3. Various properties of the deconvolution equation 85
4. An additional convergence result 86

Chapter 4. Application to the Navier–Stokes equations 89
1. Dissipative solutions to the Navier–Stokes equations 89
2. The deconvolution model 91
2.1. A priori estimates 93
2.2. Compactness property 94

Bibliography 101

Contents

Chapter 1. Rough boundaries and wall laws 107
1. Introduction 107
2. Wall law for Poisson's equation with the homogeneous Dirichlet condition at the rough boundary 108
2.1. The geometry and statement of the model problem 109
2.2. Laplace's boundary layer 112
2.3. Rigorous derivation of the wall law 115
2.4. Some further questions: almost periodic rough boundaries and curved rough boundaries 118
3. Wall laws for the Stokes and Navier–Stokes equations 120
3.1. Navier's boundary layer 121
3.2. Justification of the Navier slip condition for the laminar 3D Couette flow 124
3.3. Wall laws for fluids obeying Fourier's boundary conditions at the rough boundary 129
4. Rough boundaries and drag minimization 129

Bibliography 131

Contents

Chapter 1. Introduction 139
1. Characteristic IBVP's of symmetric hyperbolic systems 139
2. Known results 142
3. Characteristic free boundary problems 143
3.1. Compressible vortex sheets 145
3.2. Strong discontinuities for ideal MHD 145

Chapter 2. Compressible vortex sheets 149
1. The nonlinear equations in a fixed domain 152
2. The L^2 energy estimate for the linearized problem 154
3. Proof of the L^2-energy estimate 156
4. Tame estimate in Sobolev norms 158
5. The Nash–Moser iterative scheme 160
5.1. Preliminary steps 160
5.2. Description of the iterative scheme 162

Chapter 3. An example of loss of normal regularity 167
1. A toy model 167
2. Two for one 169
3. Modified toy model 171

Chapter 4. Regularity for characteristic symmetric IBVP's 175
1. Problem of regularity and main result 175
2. Function spaces 178
3. The scheme of the proof of Theorem 4.1 180
3.1. The homogeneous IBVP, tangential regularity 181
3.1.1. Regularity of the stationary problem (4.28) 183
3.2. The nonhomogeneous IBVP, case $m = 1$ 186
3.3. The nonhomogeneous IBVP, proof for $m \geq 2$ 188
3.4. Purely tangential regularity 188
3.5. Tangential and one normal derivatives 189
3.6. Normal derivatives 190

Bibliography 191

Appendix A. The Projector P 195

Appendix B. Kreiss-Lopatinskiĭ condition 197
