

# Contents

<b>1</b>	<b>Definitions and basic examples</b>	<b>5</b>
1.1	Independent sets, circuits and bases	5
1.2	The rank function	9
1.3	Vector and affine matroids	11
1.4	Representability	15
1.5	Graphic matroids	16
1.6	Other examples	17
<b>2</b>	<b>Duality and minors</b>	<b>19</b>
2.1	Dual matroids	19
2.2	Matroid minors	22
2.3	Duality and minors for representable matroids	24
2.4	Duality and minors for graphic matroids	26
<b>3</b>	<b>Matroid algorithms</b>	<b>31</b>
3.1	Minimum/maximum-weight base	31
3.2	Matroid intersection problem	34
<b>4</b>	<b>Matroid Intersection Theorem — Corollaries</b>	<b>39</b>
4.1	Analogues of Nash-Williams Theorems	39
4.2	Maximum average degree of graphs	43
4.3	Common transversals	45
<b>5</b>	<b>Connectivity and separation</b>	<b>49</b>
5.1	Connectivity, separation and unions	49
5.2	Tutte, essential and cyclic connectivity	53
5.3	Computing minimal separations	60
<b>6</b>	<b>Representability of matroids</b>	<b>63</b>
6.1	Matroid representations	63
6.2	Representability over finite fields	68
6.3	Regular matroids	71

<b>7</b>	<b>Graphic matroids</b>	<b>77</b>
7.1	Whitney's theorem . . . . .	77
7.2	Recognizing graphic matroids . . . . .	83
<b>8</b>	<b>Branch-decompositions</b>	<b>87</b>
8.1	Definition . . . . .	87
8.2	Tangles and loose-tangles . . . . .	88
8.3	Computing branch-width . . . . .	92
<b>9</b>	<b>Matroids with bounded branch-width</b>	<b>99</b>
9.1	Decomposition width . . . . .	99
9.2	The Tutte polynomial . . . . .	102
9.3	Deciding MSOL-formulas . . . . .	104
	<b>Bibliography</b>	<b>108</b>
	<b>Index</b>	<b>112</b>
