

Contents

UNIT I

Introduction to Physiology: The Cell and General Physiology

CHAPTER 1

Functional Organization of the Human Body and Control of the "Internal Environment"	3
Cells Are the Living Units of the Body	3
Extracellular Fluid—the "Internal Environment"	3
Homeostasis—Maintenance of a Nearly Constant Internal Environment	4
Control Systems of the Body	7
Summary—Automaticity of the Body	10

CHAPTER 2

The Cell and Its Functions	13
Organization of the Cell	13
Cell Structure	14
Comparison of the Animal Cell With Precellular Forms of Life	20
Functional Systems of the Cell	21
Locomotion of Cells	26

CHAPTER 3

Genetic Control of Protein Synthesis, Cell Function, and Cell Reproduction	31
Cell Nucleus Genes Control Protein Synthesis	31
Transcription—Transfer of Cell Nucleus DNA Code to Cytoplasm RNA Code	33
Translation—Formation of Proteins on the Ribosomes	37
Synthesis of Other Substances in the Cell	38
Control of Gene Function and Biochemical Activity in Cells	38
The DNA—Genetic System Controls Cell Reproduction	41
Cell Differentiation	45
Apoptosis—Programmed Cell Death	45
Cancer	46

UNIT II

Membrane Physiology, Nerve, and Muscle

CHAPTER 4

Transport of Substances Through Cell Membranes	51
The Cell Membrane Is a Lipid Bilayer With Cell Membrane Transport Proteins	51
Diffusion	52
Active Transport of Substances Through Membranes	58

CHAPTER 5

Membrane Potentials and Action Potentials	63
Basic Physics of Membrane Potentials	63
Resting Membrane Potential of Neurons	65
Neuron Action Potential	67
Propagation of the Action Potential	71
Re-Establishing Sodium and Potassium Ionic Gradients After Action Potentials are Completed—Importance of Energy Metabolism	72
Plateau in Some Action Potentials	72
Rhythmicity of Some Excitable Tissues—Repetitive Discharge	73
Special Characteristics of Signal Transmission in Nerve Trunks	74
Excitation—The Process of Eliciting the Action Potential	75

CHAPTER 6

Contraction of Skeletal Muscle	79
Physiological Anatomy of Skeletal Muscle	79
General Mechanism of Muscle Contraction	81
Molecular Mechanism of Muscle Contraction	82
Energetics of Muscle Contraction	85
Characteristics of Whole Muscle Contraction	87

CHAPTER 7

Excitation of Skeletal Muscle: Neuromuscular Transmission and Excitation-Contraction Coupling	93
Neuromuscular Junction and Transmission of Impulses From Nerve Endings to Skeletal Muscle Fibers	93
Muscle Action Potential	97
Excitation-Contraction Coupling	97

CHAPTER 8

Excitation and Contraction of Smooth Muscle	101
Contraction of Smooth Muscle	101
Regulation of Contraction by Calcium Ions	103
Nervous and Hormonal Control of Smooth Muscle Contraction	105

UNIT III**The Heart****CHAPTER 9**

Cardiac Muscle; The Heart as a Pump and Function of the Heart Valves	113
Physiology of Cardiac Muscle	113
Cardiac Cycle	117
Regulation of Heart Pumping	123

CHAPTER 10

Rhythmical Excitation of the Heart	127
Specialized Excitatory and Conductive System of the Heart	127
Control of Excitation and Conduction in the Heart	131

CHAPTER 11

Fundamentals of Electrocardiography	135
Waveforms of the Normal Electrocardiogram	135
Flow of Current Around the Heart During the Cardiac Cycle	137
Electrocardiographic Leads	138

CHAPTER 12

Electrocardiographic Interpretation of Cardiac Muscle and Coronary Blood Flow Abnormalities: Vectorial Analysis	143
Vectorial Analysis of Electrocardiograms	143
Vectorial Analysis of the Normal Electrocardiogram	145
Mean Electrical Axis of the Ventricular QRS and its Significance	148

Conditions That Cause Abnormal Voltages of the QRS Complex	150
Prolonged and Bizarre Patterns of the QRS Complex	151
Current of Injury	152
Abnormalities in the T Wave	156

CHAPTER 13

Cardiac Arrhythmias and Their Electrocardiographic Interpretation	157
Abnormal Sinus Rhythms	157
Heart Block Within the Intracardiac Conduction Pathways	158
Premature Contractions	160
Paroxysmal Tachycardia	162
Ventricular Fibrillation	163
Atrial Fibrillation	166
Atrial Flutter	167
Cardiac Arrest	167

UNIT IV**The Circulation****CHAPTER 14**

Overview of the Circulation: Pressure, Flow, and Resistance	171
Physical Characteristics of the Circulation	171
Basic Principles of Circulatory Function	173
Interrelationships of Pressure, Flow, and Resistance	173

CHAPTER 15

Vascular Distensibility and Functions of the Arterial and Venous Systems	183
Vascular Distensibility	183
Arterial Pressure Pulsations	184
Veins and Their Functions	188

CHAPTER 16

The Microcirculation and Lymphatic System: Capillary Fluid Exchange, Interstitial Fluid, and Lymph Flow	193
Structure of the Microcirculation and Capillary System	193
Flow of Blood in the Capillaries—Vasomotion	194
Exchange of Water, Nutrients, and Other Substances Between the Blood and Interstitial Fluid	195
Interstitium and Interstitial Fluid	196
Fluid Filtration Across Capillaries	197
Lymphatic System	201

CHAPTER 17		
Local and Humoral Control of Tissue Blood Flow	205	
Local Control of Blood Flow in Response to Tissue Needs	205	
Mechanisms of Blood Flow Control	205	
Humoral Control of the Circulation	214	
CHAPTER 18		
Nervous Regulation of the Circulation and Rapid Control of Arterial Pressure	217	
Nervous Regulation of the Circulation	217	
Special Features of Nervous Control of Arterial Pressure	226	
CHAPTER 19		
Role of the Kidneys in Long-Term Control of Arterial Pressure and in Hypertension: The Integrated System for Arterial Pressure Regulation	229	
Renal-Body Fluid System for Arterial Pressure Control	229	
Role of the Renin-Angiotensin System in Arterial Pressure Control	236	
Summary of Integrated Multifaceted Systems for Arterial Pressure Regulation	243	
CHAPTER 20		
Cardiac Output, Venous Return, and Their Regulation	245	
Normal Values for Cardiac Output at Rest and During Activity	245	
Control of Cardiac Output by Venous Return—Frank-Starling Mechanism of the Heart	245	
Methods For Measuring Cardiac Output	256	
CHAPTER 21		
Muscle Blood Flow and Cardiac Output During Exercise; the Coronary Circulation and Ischemic Heart Disease	259	
Blood Flow Regulation in Skeletal Muscle at Rest and During Exercise	259	
Coronary Circulation	262	
CHAPTER 22		
Cardiac Failure	271	
Circulatory Dynamics in Cardiac Failure	271	
Unilateral Left Heart Failure	275	
Low-Output Cardiac Failure—Cardiogenic Shock	275	
Edema in Patients With Cardiac Failure	275	
Cardiac Reserve	277	
Quantitative Graphic Analysis of Cardiac Failure	278	
Heart Failure With Diastolic Dysfunction and Normal Ejection Fraction	280	
High-Output Cardiac Failure	280	
CHAPTER 23		
Heart Valves and Heart Sounds; Valvular and Congenital Heart Defects	283	
Heart Sounds	283	
Abnormal Circulatory Dynamics in Valvular Heart Disease	286	
Abnormal Circulatory Dynamics in Congenital Heart Defects	288	
Use of Extracorporeal Circulation During Cardiac Surgery	291	
Hypertrophy of the Heart in Valvular and Congenital Heart Disease	291	
CHAPTER 24		
Circulatory Shock and Its Treatment	293	
Physiological Causes of Shock	293	
Shock Caused by Hypovolemia—Hemorrhagic Shock	294	
Neurogenic Shock—Increased Vascular Capacity	299	
Anaphylactic Shock and Histamine Shock	300	
Septic Shock	300	
Physiology of Treatment in Shock	301	
Circulatory Arrest	301	
UNIT V		
The Body Fluids and Kidneys		
CHAPTER 25		
Regulation of Body Fluid Compartments: Extracellular and Intracellular Fluids; Edema	305	
Fluid Intake and Output Are Balanced During Steady-State Conditions	305	
Body Fluid Compartments	306	
Constituents of Extracellular and Intracellular Fluids	307	
Measurement of Body Fluid Compartment Volumes—Indicator-Dilution Principle	308	
Fluid Exchange and Osmotic Equilibrium Between Intracellular and Extracellular Fluid	310	
Volume and Osmolality of Extracellular and Intracellular Fluids in Abnormal States	312	
Glucose and Other Solutions Administered For Nutritive Purposes	313	

Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and Hypernatremia	314	Control of Extracellular Fluid Osmolarity and Sodium Concentration	375
Edema: Excess Fluid in the Tissues	316	Osmoreceptor-ADH Feedback System	375
Fluids in Potential Spaces of the Body	319	Importance of Thirst in Controlling Extracellular Fluid Osmolarity and Sodium Concentration	377
CHAPTER 26		CHAPTER 30	
The Urinary System: Functional Anatomy and Urine Formation by the Kidneys	321	Renal Regulation of Potassium, Calcium, Phosphate, and Magnesium; Integration of Renal Mechanisms for Control of Blood Volume and Extracellular Fluid Volume	383
Multiple Functions of the Kidneys	321	Regulation of Extracellular Fluid Potassium Concentration and Potassium Excretion	383
Physiologic Anatomy of the Kidneys	322	Regulation of Renal Calcium Excretion and Extracellular Calcium Ion Concentration	390
Micturition	324	Regulation of Renal Phosphate Excretion	391
Urine Formation Results from Glomerular Filtration, Tubular Reabsorption, and Tubular Secretion	329	Regulation of Renal Magnesium Excretion and Extracellular Magnesium Ion Concentration	392
CHAPTER 27		Integration of Renal Mechanisms for Control of Extracellular Fluid	392
Glomerular Filtration, Renal Blood Flow, and Their Control	331	Importance of Pressure Natriuresis and Pressure Diuresis in Maintaining Body Sodium and Fluid Balance	394
Glomerular Filtration—The First Step in Urine Formation	331	Distribution of Extracellular Fluid Between Interstitial Spaces and Vascular System	396
Determinants of the Glomerular Filtration Rate	333	Nervous and Hormonal Factors Increase Effectiveness of Renal–Body Fluid Feedback Control	396
Renal Blood Flow	336	Integrated Responses to Changes in Sodium Intake	399
Physiological Control of Glomerular Filtration and Renal Blood Flow	337	Conditions That Cause Large Increases in Blood Volume and Extracellular Fluid Volume	400
Autoregulation of Glomerular Filtration Rate and Renal Blood Flow	338	Conditions That Cause Large Increases in Extracellular Fluid Volume With Normal or Reduced Blood Volume	400
CHAPTER 28		CHAPTER 31	
Renal Tubular Reabsorption and Secretion	343	Acid–Base Regulation	403
Tubular Reabsorption Is Quantitatively Large and Highly Selective	343	Hydrogen Ion Concentration Is Precisely Regulated	403
Tubular Reabsorption Includes Passive and Active Mechanisms	343	Acids and Bases—Definitions and Meanings	403
Reabsorption and Secretion Along Different Parts of the Nephron	349	Defending Against Changes in H ⁺ Concentration: Buffers, Lungs, and Kidneys	404
Regulation of Tubular Reabsorption	355	Buffering of H ⁺ in the Body Fluids	404
Use of Clearance Methods to Quantify Kidney Function	360	Bicarbonate Buffer System	405
CHAPTER 29		Phosphate Buffer System	407
Urine Concentration and Dilution; Regulation of Extracellular Fluid Osmolarity and Sodium Concentration	365	Proteins Are Important Intracellular Buffers	407
Kidneys Excrete Excess Water by Forming Dilute Urine	365	Respiratory Regulation of Acid–Base Balance	408
Kidneys Conserve Water by Excreting Concentrated Urine	367	Renal Control of Acid–Base Balance	409
Countercurrent Multiplier Mechanism Produces Hyperosmotic Renal Medullary Interstitium	368	Secretion of H ⁺ and Reabsorption of HCO ₃ ⁻ by the Renal Tubules	410
Loop of Henle Characteristics That Cause Solutes to Be Trapped in the Renal Medulla	368		

Combination of Excess H ⁺ With Phosphate and Ammonia Buffers In the Tubule Generates "New" HCO ₃ ⁻	412
Quantifying Renal Acid-Base Excretion	414
Regulation of Renal Tubular H ⁺ Secretion	414
Renal Correction of Acidosis—Increased Excretion of H ⁺ and Addition of HCO ₃ ⁻ to the Extracellular Fluid	415
Renal Correction of Alkalosis—Decreased Tubular Secretion of H ⁺ and Increased Excretion of HCO ₃ ⁻	416

CHAPTER 32

Diuretics and Kidney Diseases	421
Diuretics and Their Mechanisms of Action	421
Kidney Diseases	423
Acute Kidney Injury	423
Chronic Kidney Disease Is Often Associated With Irreversible Loss of Functional Nephrons	426

UNIT VI**Blood Cells, Immunity, and Blood Coagulation****CHAPTER 33**

Red Blood Cells, Anemia, and Polycythemia	439
Red Blood Cells (Erythrocytes)	439
Anemias	446
Polycythemia	447

CHAPTER 34

Resistance of the Body to Infection: I. Leukocytes, Granulocytes, the Monocyte-Macrophage System, and Inflammation	449
Leukocytes (White Blood Cells)	449
Neutrophils and Macrophages Defend Against Infections	450
Monocyte-Macrophage Cell System (Reticuloendothelial System)	452
Inflammation: Role of Neutrophils and Macrophages	454
Eosinophils	456
Basophils	457
Leukopenia	457
Leukemias	457

CHAPTER 35

Resistance of the Body to Infection: II. Immunity and Allergy	459
Acquired (Adaptive) Immunity	459
Allergy and Hypersensitivity	469

CHAPTER 36

Blood Types; Transfusion; and Tissue and Organ Transplantation	471
Antigenicity Causes Immune Reactions of Blood	471
O-A-B Blood Types	471
Rh Blood Types	473
Transfusion Reactions Resulting From Mismatched Blood Types	474
Transplantation of Tissues and Organs	475

CHAPTER 37

Hemostasis and Blood Coagulation	477
Hemostasis Events	477
Mechanism of Blood Coagulation	479
Conditions That Cause Excessive Bleeding in Humans	484
Thromboembolic Conditions	486
Anticoagulants for Clinical Use	486
Blood Coagulation Tests	487

UNIT VII**Respiration****CHAPTER 38**

Pulmonary Ventilation	491
Mechanics of Pulmonary Ventilation	491
Pulmonary Volumes and Capacities	495
Alveolar Ventilation	497

CHAPTER 39

Pulmonary Circulation, Pulmonary Edema, and Pleural Fluid	503
Physiological Anatomy of the Pulmonary Circulatory System	503
Pressures in the Pulmonary System	503
Blood Volume of the Lungs	504
Blood Flow Through the Lungs and its Distribution	504
Effect of Hydrostatic Pressure Gradients in the Lungs on Regional Pulmonary Blood Flow	505
Pulmonary Capillary Dynamics	507
Fluid in the Pleural Cavity	509

CHAPTER 40

Principles of Gas Exchange; Diffusion of Oxygen and Carbon Dioxide Through the Respiratory Membrane	511
Compositions of Alveolar Air and Atmospheric Air Are Different	513
Diffusion of Gases Through the Respiratory Membrane	515

CHAPTER 41**Transport of Oxygen and Carbon Dioxide in Blood and Tissue Fluids 521**

Transport of Oxygen From the Lungs to the Body Tissues	521
Transport of CO ₂ in Blood	528
Respiratory Exchange Ratio	530

CHAPTER 42**Regulation of Respiration 531**

Respiratory Center	531
Chemical Control of Respiration	533
Peripheral Chemoreceptor System—Role of Oxygen in Respiratory Control	534
Regulation of Respiration During Exercise	536

CHAPTER 43**Respiratory Insufficiency—Pathophysiology, Diagnosis, Oxygen Therapy 541**

Useful Methods for Studying Respiratory Abnormalities	541
Pathophysiology of Specific Pulmonary Abnormalities	543
Hypoxia and Oxygen Therapy	546
Hypercapnia—Excess Carbon Dioxide in the Body Fluids	548
Artificial Respiration	548

UNIT VIII**Aviation, Space, and Deep-Sea Diving Physiology****CHAPTER 44****Aviation, High Altitude, and Space Physiology 553**

Effects of Low Oxygen Pressure on the Body	553
--	-----

CHAPTER 45**Physiology of Deep-Sea Diving and Other Hyperbaric Conditions 561**

Effect of High Partial Pressures of Individual Gases on the Body	561
Self-Contained Underwater Breathing Apparatus (SCUBA) Diving	565

UNIT IX**The Nervous System: A. General Principles and Sensory Physiology****CHAPTER 46****Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters 569**

General Design of the Nervous System	569
Major Levels of Central Nervous System Function	571
Comparison of the Nervous System to a Computer	572
Central Nervous System Synapses	572
Special Characteristics of Synaptic Transmission	584

CHAPTER 47**Sensory Receptors, Neuronal Circuits for Processing Information 587**

Types of Sensory Receptors and the Stimuli They Detect	587
Transduction of Sensory Stimuli Into Nerve Impulses	587
Signal Intensity Transmission in Nerve Tracts—Spatial and Temporal Summation	592
Transmission and Processing of Signals in Neuronal Pools	592
Instability and Stability of Neuronal Circuits	597

CHAPTER 48**Somatic Sensations: I. General Organization, Tactile and Position Senses 599**

Sensory Pathways for Transmitting Somatic Signals Into the Central Nervous System	601
Transmission in the Dorsal Column—Medial Lemniscal System	601
Transmission of Sensory Signals in the Anterolateral Pathway	609

CHAPTER 49**Somatic Sensations: II. Pain, Headache, and Thermal Sensations 613**

Fast Pain and Slow Pain and Their Qualities	613
Pain Receptors and Their Stimulation	613
Dual Pathways for Transmission of Pain Signals Into the Central Nervous System	614
Pain Suppression (Analgesia) System in the Brain and Spinal Cord	616
Referred Pain	618
Visceral Pain	618
Thermal Sensations	622

UNIT X**The Nervous System: B. The Special Senses****CHAPTER 50**

The Eye: I. Optics of Vision	627
Physical Principles of Optics	627
Optics of the Eye	630
Fluid System of the Eye—Intraocular Fluid	635

CHAPTER 51

The Eye: II. Receptor and Neural Function of the Retina	639
Anatomy and Function of the Structural Elements of the Retina	639
Photochemistry of Vision	641
Color Vision	645
Neural Function of the Retina	646

CHAPTER 52

The Eye: III. Central Neurophysiology of Vision	653
Visual Pathways	653
Organization and Function of the Visual Cortex	654
Neuronal Patterns of Stimulation During Analysis of Visual Images	656
Eye Movements and Their Control	657
Autonomic Control of Accommodation and Pupillary Aperture	660

CHAPTER 53

The Sense of Hearing	663
Tympanic Membrane and the Ossicular System	663
Cochlea	664
Central Auditory Mechanisms	669

CHAPTER 54

The Chemical Senses—Taste and Smell	675
Sense of Taste	675
Sense of Smell	679

UNIT XI**The Nervous System: C. Motor and Integrative Neurophysiology****CHAPTER 55**

Spinal Cord Motor Functions; the Cord Reflexes	685
Organization of the Spinal Cord for Motor Functions	685

Muscle Sensory Receptors—Muscle Spindles and Golgi Tendon Organs—and Their Roles in Muscle Control	686
Flexor Reflex and the Withdrawal Reflexes	691
Crossed Extensor Reflex	693
Reciprocal Inhibition and Reciprocal Innervation	693
Reflexes of Posture and Locomotion	693

CHAPTER 56

Cortical and Brain Stem Control of Motor Function	697
Motor Cortex and Corticospinal Tract	697
Control of Motor Functions by the Brain Stem	703
Vestibular Sensations and Maintenance of Equilibrium	704

CHAPTER 57

Cerebellum and Basal Ganglia Contributions to Overall Motor Control	711
The Cerebellum and Its Motor Functions	711
The Basal Ganglia and Their Motor Functions	720
Integration of the Many Parts of the Total Motor Control System	724

CHAPTER 58

Cerebral Cortex, Intellectual Functions of the Brain, Learning, and Memory	727
Physiologic Anatomy of the Cerebral Cortex	727
Functions of Specific Cortical Areas	728
The Corpus Callosum and Anterior Commissure Transfer Thoughts, Memories, Training, and Other Information Between the Two Cerebral Hemispheres	735
Thoughts, Consciousness, and Memory	735

CHAPTER 59

The Limbic System and the Hypothalamus—Behavioral and Motivational Mechanisms of the Brain	741
Activating—Driving Systems of the Brain	741
Limbic System	744
The Hypothalamus, a Major Control Headquarters for the Limbic System	745
Specific Functions of Other Parts of the Limbic System	749

CHAPTER 60

States of Brain Activity—Sleep, Brain Waves, Epilepsy, Psychoses, and Dementia	753
Sleep	753

CHAPTER 61

The Autonomic Nervous System and the Adrenal Medulla	763
General Organization of the Autonomic Nervous System	763
Basic Characteristics of Sympathetic and Parasympathetic Function	765
Selective Stimulation of Target Organs by Sympathetic and Parasympathetic Systems or "Mass Discharge"	773

CHAPTER 62

Cerebral Blood Flow, Cerebrospinal Fluid, and Brain Metabolism	777
Cerebral Blood Flow	777
Cerebrospinal Fluid System	780
Brain Metabolism	783

UNIT XII**Gastrointestinal Physiology****CHAPTER 63**

General Principles of Gastrointestinal Function—Motility, Nervous Control, and Blood Circulation	787
General Principles of Gastrointestinal Motility	787
Neural Control of Gastrointestinal Function—Enteric Nervous System	789
Hormonal Control of Gastrointestinal Motility	791
Functional Movements in the Gastrointestinal Tract	793
Gastrointestinal Blood Flow—Splanchnic Circulation	794

CHAPTER 64

Propulsion and Mixing of Food in the Alimentary Tract	797
Ingestion of Food	797
Motor Functions of the Stomach	799
Movements of the Small Intestine	802
Movements of the Colon	804
Other Autonomic Reflexes That Affect Bowel Activity	806

CHAPTER 65

Secretory Functions of the Alimentary Tract	807
General Principles of Alimentary Tract Secretion	807
Secretion of Saliva	809

Gastric Secretion	811
Pancreatic Secretion	814
Bile Secretion by the Liver	817
Secretions of the Small Intestine	820

CHAPTER 66

Digestion and Absorption in the Gastrointestinal Tract	823
Digestion of Various Foods by Hydrolysis	823
Basic Principles of Gastrointestinal Absorption	827
Absorption in the Small Intestine	828
Absorption in the Large Intestine: Formation of Feces	831

CHAPTER 67

Physiology of Gastrointestinal Disorders	833
---	------------

UNIT XIII**Metabolism and Temperature Regulation****CHAPTER 68**

Metabolism of Carbohydrates and Formation of Adenosine Triphosphate	843
--	------------

CHAPTER 69

Lipid Metabolism	853
Basic Chemical Structure of Triglycerides (Neutral Fat)	853
Transport of Lipids in the Body Fluids	853

CHAPTER 70

Protein Metabolism	865
---------------------------	------------

CHAPTER 71

The Liver	871
------------------	------------

CHAPTER 72

Dietary Balances; Regulation of Feeding; Obesity and Starvation; Vitamins and Minerals	877
Energy Intake and Output	
Balanced Under Steady-State Conditions	877
Regulation of Food Intake and Energy Storage	879

CHAPTER 73

Energetics and Metabolic Rate	893
--------------------------------------	------------

CHAPTER 74

Body Temperature Regulation and Fever	901
Normal Body Temperatures	901
Body Temperature Is Controlled by Balancing Heat Production and Heat Loss	901
Regulation of Body Temperature—Role of the Hypothalamus	905
Abnormalities of Body Temperature Regulation	909

UNIT XIV**Endocrinology and Reproduction****CHAPTER 75**

Introduction to Endocrinology	915
Coordination of Body Functions by Chemical Messengers	915
Chemical Structure and Synthesis of Hormones	915
Hormone Secretion, Transport, and Clearance From the Blood	919
Mechanisms of Action of Hormones	920

CHAPTER 76

Pituitary Hormones and Their Control by the Hypothalamus	929
Pituitary Gland and Its Relation to the Hypothalamus	929
Hypothalamus Controls Pituitary Secretion	930
Physiological Functions of Growth Hormone	932
Posterior Pituitary Gland and Its Relation to the Hypothalamus	938

CHAPTER 77

Thyroid Metabolic Hormones	941
Synthesis and Secretion of the Thyroid Metabolic Hormones	941
Physiological Functions of the Thyroid Hormones	944
Regulation of Thyroid Hormone Secretion	948

CHAPTER 78

Adrenocortical Hormones	955
Corticosteroids: Mineralocorticoids, Glucocorticoids, and Androgens	955
Synthesis and Secretion of Adrenocortical Hormones	955
Functions of Mineralocorticoids—Aldosterone	958
Functions of Glucocorticoids	962

CHAPTER 79

Insulin, Glucagon, and Diabetes Mellitus	973
Insulin and Its Metabolic Effects	973
Glucagon and Its Functions	982
Summary of Blood Glucose Regulation	983

CHAPTER 80

Parathyroid Hormone, Calcitonin, Calcium and Phosphate Metabolism, Vitamin D, Bone, and Teeth	991
Overview of Calcium and Phosphate Regulation in Extracellular Fluid and Plasma	991
Bone and Its Relationship to Extracellular Calcium and Phosphate	993
Vitamin D	997
Parathyroid Hormone	999
Calcitonin	1002
Summary of Control of Calcium Ion Concentration	1003
Physiology of the Teeth	1006

CHAPTER 81

Reproductive and Hormonal Functions of the Male (and Function of the Pineal Gland)	1011
Spermatogenesis	1011
Male Sexual Act	1016
Testosterone and Other Male Sex Hormones	1018

CHAPTER 82

Female Physiology Before Pregnancy and Female Hormones	1027
Physiologic Anatomy of the Female Sexual Organs	1027
Oogenesis and Follicular Development in the Ovaries	1027
Female Hormonal System	1027
Monthly Ovarian Cycle and Function of Gonadotropic Hormones	1028
Functions of Ovarian Hormones—Estradiol and Progesterone	1032
Regulation of Female Monthly Rhythm—Interplay Between Ovarian and Hypothalamic-Pituitary Hormones	1037
Female Sexual Act	1041

CHAPTER 83

Pregnancy and Lactation	1045
Maturation and Fertilization of the Ovum	1045
Early Nutrition of the Embryo	1047
