FUNDAMENTALS OF BIOPHYSICS AND MEDICAL TECHNOLOGY	
1 Biophysics and its importance for medicine (I. Hrazdira)	1
2 The structure of living matter (V. Mornstein)	3
2.1 A recapitulation of quantum and nuclear physics	3
2.1.1 The sub-molecular structure of matter	3
2.1.1.1 The four fundamental interactions	3
2.1.1.2 Elementary particles of matter	4
2.1.1.3 The quantum properties of particles and their consequences	5
2.1.2 General properties of atoms	7
2.1.2.1 The electron shell of the atom	7
2.1.2.2 The atomic nucleus and its properties	10
2.1.3 Radioactivity and ionizing radiation	12
2.1.3.1 Radioactive decay types	12
2.1.3.2 The laws of radioactive decay	14
2.1.3.3 Interaction of ionizing radiation with matter	16
2.1.4 Units used to measure ionizing radiation	20
2.2 An introduction to molecular biophysics	21
2.2.1 Physico-chemical properties of molecules and their structure	21
2.2.1.1 Strong interactions between atoms – chemical bonds	21
2.2.1.2 Weak chemical interactions	23
2.2.1.3 Cohesive forces and liquid viscosity	24
2.2.2 Basic properties of water	25
2.2.2.1 Water and its properties	25
2.2.2.2 The function of water in organisms	26
2.2.3 Biopolymers and their structure	27
2.2.3.1 Structure of nucleic acids	27
2.2.3.2 Protein structures and their modifications	28
2.2.3.3 Overview of the methods of studying biopolymer structures	31
2.2.4 Dispersion systems and their properties	33
2.2.4.1 Types of dispersion systems	33
2.2.4.2 Colloidal dispersions and their physical properties	35
2.2.4.3 Methods of analyzing colloids and some macroheterogeneous systems	36
3 An introduction to thermodynamics and bioenergetics (V. Mornstein)	40
3.1 Basic concepts and laws of equilibrium thermodynamics	40
3.1.1 Basic properties of thermodynamic systems	40
3.1.2 Work of the thermodynamic system. Temperature and heat.	41
3.1.3 Equations of state and basic processes in gases	43
3.1.4 The laws of thermodynamics	45
3.1.5 Thermodynamic potentials	47
3.1.6 Chemical potential	49
3.1.7 Chemical equilibrium and chemical work	50
3.2 Interpretation of some theoretical aspects of statistical physics	52
3.3 Application of the theoretical aspects of thermodynamics	56
3.3.1 Osmotic pressure	56
3.3.2 Phases of matter and phase equilibria	58
3.3.3 Surface and adsorption phenomena	62
3.3.4 Galvanic cell	64
3.3.5 Resting membrane voltage (potential)	66
3.3.5.1 The Nernst equation for resting membrane voltage	66
3.3.5.2 Donnan's equilibrium	68
3.4 An outline of the thermodynamics of living systems	69
3.4.1 Entropy production and the stationary state	69

3.4.2	Examples of non-equilibrium thermodynamic processes	71
3.4.2.1	Diffusion	71
3.4.2.2.	The Goldman equation (resting membrane voltage)	72
3.4.3	Nonlinear thermodynamics and dissipative structures	73
3.5	Energetic processes in living systems	75
3.5.1	Sources and conversions of energy in living systems	76
3.5.2	Energy consumption in living systems	77
4	Mechanical properties of living systems (I. Hrazdira and J. Škorpíková)	79
4.1	Basic concepts of mechanics	79
4.1.1	Mechanics of solids (J. Škorpíková)	79
4.1.2	Biomechanics	82
4.1.3	Classification of substances by mechanical properties	83
4.2	Structure and mechanical properties of cells	84
4.2.1	Structure of eukaryotic cells	84
4.2.2	Static mechanical properties	85
4.2.3	Dynamic properties	86
4.3	Mechanical properties of multi-cellular systems	88
4.3.1	Mechanical properties of teeth	88
4.3.2	Mechanical properties of the supportive-locomotor system	88
4.3.2.1	Statics and kinematics of bones and joints	88
4.3.2.2	Biomechanics of muscle contraction	90
4.3.3	Biomechanics of the cardiovascular system	91
4.3.3.1	Heart as a pump	91
4.3.3.2	Physical laws of flow	92
4.3.3.3	Blood flow	93
4.3.3.4	Mechanical properties of blood vessels	95
4.3.3.5	Blood flow in capillaries	97
4.3.3.6	Mechanical properties of blood	98
4.3.4	Biomechanics of breathing	98
4.3.4.1	Mechanics of breathing	98
4.3.4.2	Breathing resistance	99
4.3.4.3	Respiratory volumes and capacities	100
4.3.4.4	Mechanism of gas exchange between external and internal environment	101
4.3.5	Human voice and its properties	102
4.3.5.1	Origin of human voice	102
4.3.5.2	Acoustic composition of human speech	102
4.3.6	Biophysics of the urinary system	103
4.3.6.1	Glomerular filtration	104
4.3.6.2	Biophysical functions of the tubules	105
4.3.7	Biomechanics of the digestive system	105
5	Electrical phenomena and living systems (I. Hrazdira, V. Mornstein and J. Škorpíková)	108
5.1	Basic concepts and principles of electricity (J. Škorpíková)	108
5.1.1	Electric field	108
5.1.2	Electric current	110
5.1.3	Work and electric power of constant current	112
5.1.4	Magnetic field	112
5.2	Electrical phenomena in cells (V. Mornstein)	113
5.2.1	Resting membrane potential (voltage)	113
5.2.1.1	Measurement of the membrane potential	114
5.2.2.2	Origin of the action potential	115
5.2.3	Propagation of the action potential	116
5.2.4	Synaptic transfer of the action potential	117
5.2.4.1	Basic function of the synapse	117
5.2.4.2	Excitatory and inhibitory synapses	118
5.2.4.3	Summation of postsynaptic potentials and the origin of the action potential	119
5.2.5	Modelling electric properties of the cell membrane	119
5.3	Electric properties of tissues (I. Hrazdira)	120

5.3.1	Conduction of electric current through tissues	120
5.3.2	Electrical excitability	121
5.3.3	Passive electric properties	123
6	General characteristics of sensory perception (I. Hrazdira)	125
6.1	Sensory receptor classification	125
6.2	The transducing function of sensory receptors	126
6.3	The biophysical relationship between stimulus and sensation	127
6.4	The biophysics of perceiving chemical impulses	128
6.5	The structure and function of smell and taste receptors	129
7	The biophysics of perception of acoustic stimuli (I. Hrazdira)	131
7.1	The basic concepts of acoustics	131
7.2	Loudness, hearing field	132
7.3	The biophysical function of the ear	133
7.3.1	The mechanism of conveying acoustic signals	133
7.3.2	The mechanism of receiving and analyzing acoustic signals	135
7.3.3	Electrical phenomena related to sound reception	137
7.4	The biophysical function of the vestibular apparatus	138
7.5	Correction of hearing deficiency	139
7.5.1	The physical principles of examining hearing deficiencies	139
7.5.2	The principles for correcting hearing deficiencies	140
8	Reception and processing of optical stimuli (I. Hrazdira and J. Škorpíková)	141
8.1	Light – physical properties and sources (J. Škorpíková)	141
8.2	Optical properties of the eye	146
8.2.1	The structure of the eyeball and the optical properties of its media	146
8.2.2	Accommodation	148
8.2.3	Spherical ametropia	149
8.2.4	Aspherical ametropia	150
8.3	The mechanism of perceiving light stimuli	150
8.3.1	Structure of the retina	150
8.3.2	Vision	152
8.3.3	Colour vision and its disorders	154
8.3.4	Electrical phenomena in the retina	156
8.4	Correction of the distortions of the optical system of the eye	157
8.4.1	Glasses	157
8.4.2	Contact lenses	158
8.4.3	Artificial intraocular lens	159
8.4.4	Retinal implants	159
9	The impact of physical factors on living systems (I. Hrazdira)	161
9.1	The impact of mechanical factors	161
9.1.1	The impact of pressure changes	161
9.1.2	The impact of velocity changes	162
9.1.3	The impact of mechanical forces	163
9.2	The impact of acoustic factors	164
9.2.1	The impact of sound fields	164
9.2.2	Effects of ultrasound	165
9.3	The impact of meteorological conditions on the organism	166
9.4	Effects of electric currents	168
9.4.1	Electric current conduction through tissues	169
9.4.2	Electric shocks	169
9.5	Effects of magnetic fields	170
9.6	Effects of non-ionizing electromagnetic radiation	172
9.6.1	Physical characteristics of visible radiation. Laser light.	172
9.6.2	Biological effects of optical radiation	174
9.7	Biological effects of ionizing radiation	176
9.7.1	Mechanisms of the effects	176
9.7.2	Biological effects of nuclear explosions	178

9.7.3 Protection against ionizing radiation	179
10 The human organism as a source of information (I. Hrazdira)	180
10.1 Biosignals and their classification	180
10.2 Biosignal processing	181
11 Measuring and recording diagnostic methods (I. Hrazdira and V. Mornstein)	183
11.1 Detection and measurement of mechanical quantities (V. Mornstein)	183
11.1.1 Pressure measurement (tonometry)	183
11.1.1.1 The transducers	183
11.1.1.2 Blood pressure	184
11.1.1.3 Other methods of pressure measurement in medicine	185
11.1.2 Measurement of mechanical work and power	185
11.1.3 Measurement of mechanical properties of liquids	186
11.1.4 Detection of low-frequency mechanical vibrations and sounds	187
11.2 Temperature measurement (I. Hrazdira)	187
11.2.1 Contact thermometric methods	188
11.2.1.1 Thermal volume expansion of liquids	188
11.2.1.2 Thermal expansion of metals	188
11.2.1.3 Changes in electrical properties of materials	188
11.2.2 Contactless temperature measurement	189
11.3 Electrodiagnostic methods (I. Hrazdira)	190
11.3.1 Electrodes	190
11.3.2 Processing of electrical signals	191
11.3.3 Detecting electrodiagnostic methods	192
11.3.3.1 Electrocardiography (EKG)	192
11.3.3.2 Electromyography (EMG)	195
11.3.3.3 Electroencephalography (EEG)	196
11.3.3.4 Electroretinography (ERG)	197
11.3.3.5 Diagnostic value of magnetic signals	197
11.3.4 Stimulating electrodiagnostic methods	198
11.4 Electrochemical analytical methods (V. Mornstein)	199
11.4.1 Main kinds of electrodes	199
11.4.2 Conductometry	201
11.4.3 Polarography and voltammetry	202
11.5 Optical laboratory methods (V. Mornstein)	203
11.5.1 Spectrophotometry	203
11.5.2 Polarimetry	205
11.5.3 Refractometry	206
11.6 Methods of microscopy (V. Mornstein)	208
11.6.1 Light microscopy	209
11.6.1.1 Scheme of a compound light microscope and properties of its optical system	209
11.6.1.2 Different kinds of compound microscopes	211
11.6.1.3 Special optical microscopes	212
11.6.1.4 Optical scanning microscopes	213
11.6.2 Electron microscopy	215
11.6.2.1 Transmission electron microscopy	216
11.6.2.2 Scanning electron microscopy (SEM)	216
11.6.3 Acoustic microscopy	217
11.7 Bone densitometry (I. Hrazdira)	217
11.7.1 X-ray densitometry	217
11.7.2 Ultrasound densitometry	218
11.8 Detection and dosimetry of ionising radiation (V. Mornstein)	218
11.8.1 Chemical and photochemical detectors and dosimeters	218
11.8.2 Electrical (ionisation) methods	219
11.8.3 Scintillation counters	222
11.9 Monitoring and telemetry (V. Mornstein)	223
12 Imaging diagnostic methods (I. Hrazdira and V. Mornstein)	225

12.1 General principles of diagnostic imaging (I. Hrazdira)	225
12.1.1 Algorithm of the imaging process	225
12.1.2 Assessment of image quality	225
12.2 Thermography (I. Hrazdira)	226
12.2.1 Contact thermography	226
12.2.2 The contactless thermography	227
12.2.3 Diagnostic importance of thermography	227
12.3 Ultrasound imaging and Doppler methods (I. Hrazdira)	228
12.3.1 Theoretical basis	228
12.3.2 The mechanism of ultrasound imaging	229
12.3.3 Doppler diagnostic methods	231
12.3.4 Ultrasound echo-contrast agents	233
12.3.5 Safety of ultrasound diagnostic procedures	234
12.3.6 Clinical value of ultrasonography	234
12.4 Endoscopic methods (I. Hrazdira)	235
12.4.1 Endoscopic mirrors	235
12.4.2 Endoscopes with rigid tubes	236
12.4.3 Fibre-optic endoscopes	236
12.5 X-ray imaging methods (V. Mornstein)	237
12.5.1 Principal scheme of an X-ray instrument	238
12.5.2 Origin of the X-ray image	239
12.5.2.1 Course of X-rays	239
12.5.2.2 Unsharpness of the image	240
12.5.2.3 Usage of contrast agents	241
12.5.3 The most important methods in X-ray diagnostics	241
12.5.3.1 Image intensifier	242
12.5.3.2 X-ray apparatuses used in dentistry	243
12.5.3.3 Xeroradiography	243
12.5.3.4 Classical (layer) tomography	243
12.5.4 Computed tomography (CT)	244
12.6 Radionuclide imaging and other diagnostic methods (V. Mornstein)	245
12.6.1 Tracing and radioimmunoassay	246
12.6.2 Scintillation counters and rectilinear scanners	246
12.6.3 Anger gamma-camera	247
12.6.4 SPECT and PET	247
12.7 Magnetic resonance imaging (V. Mornstein)	249
12.7.1 Nuclear magnetic resonance	249
12.7.2 The principle of image formation	251
12.7.3 Clinical value of MRI	253
13 Biophysical basis of non-invasive therapeutic methods (I. Hrazdira)	255
13.1 Therapy by means of mechanical energy	255
13.1.1 Ultrasound therapy	255
13.1.2 Lithotripsy by shock waves	255
13.1.3 Shock wave therapy	257
13.2 Electrotherapy	257
13.2.1 Applications of direct current (DC)	257
13.2.2 Applications of alternating current (AC) and electric impulses	258
13.3 Principles of magnetotherapy	260
13.3.1 Magnetic fields and their interaction with living systems	260
13.3.2 Main components of therapeutic effect of magnetic field	261
13.4 Methods of thermotherapy	261
13.4.1 Methods based on heat transfer	262
13.4.2 Methods based on heat production inside the body	263
13.5 Visible light as a therapeutic tool	264
13.5.1 Therapy with laser radiation	264
13.5.2 Therapy by polarised light	266
13.5.3 Photodynamic therapy	266

13.5.4	Therapeutic sources of ultraviolet radiation	267
13.6	Physical principles of radiotherapy	268
13.6.1	Basic phenomena	268
13.6.2	Sources of ionising radiation used in radiotherapy	268
13.6.3	Methods of radiotherapy	269
14	Biophysical basis of invasive therapeutic methods (I. Hrazdira)	271
14.1	Physical principles of modern surgical instruments	271
14.1.1	Electrosurgery	271
14.1.2	Lasers in surgery instrumentation	271
14.1.3	Ultrasound surgery	272
14.1.4	Cryosurgery	273
14.1.5	Water jet as a surgical tool	273
14.2	Equipment assisting or replacing organ functions	273
14.2.1	Breathing assist devices	274
14.2.2	Heart assist devices and artificial heart	274
14.2.3	Haemodialyser – an artificial kidney	275
14.2.4	Limb prostheses	276
14.2.5	Infusion pumps	277
15	Notes on biophysical principles and instrumentation in dental medicine (I. Hrazdira)	279
15.1	Mechanical properties of teeth	279
15.2	Biocompatibility of materials used in dental medicine	279
15.2.1	General features of biocompatibility	279
15.2.2	Problems of biocompatibility in dental medicine	280
15.2.3	Basic characteristic of materials for dental prostheses	281
15.3	X-ray devices in dentistry	284
15.4	Measurement of electrical excitability of dental pulp	285
15.5	Physical principles of main tools used in dentistry	285
15.5.1	Rotary instruments	286
15.5.2	Lever tools	287
15.5.3	Ultrasound devices in dental medicine	288
15.6	Dental prostheses (dentures)	290
16	Healthcare informatics and overview of computer-literacy for medical students (A. Bourek)	292
16.1	Informatics as a science	292
16.2	The computer as a device for data sharing	294
16.3	Networks	305
16.4	Information technology (processes and tools) applied in health and healthcare	310
16.4.1	Health, healthcare, medical informatics and telemedicine	310
16.4.2	Searching for health and healthcare related evidence based documents using the World Wide Web (WWW)	313
