Preface	6
Symbols	7
1. Conceptions of Meaning	8
Traditional conceptions – Lexical meaning – Extra-logical semantics – Semantic functions – The conception of Holger S. Sørensen – Semiotics – Generative theory – Stochastic conception – Burghard Rieger and fuzzy linguistics – Human mind in semantics – The aim of the present project	
2. A Possible Comprehension of Meanings	24
Basic concepts – Text – Text segments – Menzerath-Altman's law – The derivation of the MA law – Semantic level and semantic element (SE) – The interpretation of a text – Dualism – Language economy	
3. Segmentation and Framing	40
The principle of compositeness – Semantic specification – Musical "texts" – Framing – Frequency distribution – Semantic nucleus – Larger frames	
4. Symmetry and Assymetry	59
Automorphism – Symmetry in systems – Construct vs. constituent – A system of the levels – Measurement and substitution – Two phases – Horizontal and vertical text – Semantic automorphism – The interference of automorphism	
5. Some Linguistic Aspects of the Model	79
The basic text attributes – Development – Correctness in languages – SCs as language units – Code and meanings – Language/text as a fractal set – Two types of language laws	
6. Some Formal Aspects of the Model	89
Time and text – Zipf and Shannon – The principle of compositeness – Ebbinghaus – Fields and nets – Random numbers – Hurst's indicator	

7. Semantic Space 103

Semantic graph – Example 1: Jane Austen – Example 2: Navāṛī – Segment types – Vertex degree – Shortest path – Example 1 (continuation) – Two matrices – Two other examples

8. Compositeness in Semantics (Summary and consequences) 124

Primary factor – Language and brain – Language and thinking – Knowledge and its complexes – Concept and meaning – Meaning and reality – Application: theory of sets – Application: religion – Net and its substructures

Review of conjectures 133
