Contents in Brief

1. Principles of medical optics – theoretical introduction (F. Varga) 1
1.1. Principles of optics 1
1.2. Principles of biophysics of vision 6
2. Determination of light wavelength using diffraction patterns (F. Varga) 10
3. Polarimetric determination of concentration of an optically active substance (T. Blažek, F. Varga) 12
4. Measurement of illumination and visual acuity (T. Blažek) 14
5. Principles of acoustics – theoretical introduction (J. Vackář, J. Vackářová, T. Blažek) 15
5.1. Basic concepts 15
5.2. Physiological acoustics 22
5.3. The hearing organ 25
6. Tonal audiometry – measurement of hearing threshold (J. Vackářová) 28
7. Proteins, lipids and their interactions – theoretical introduction (A. Kotyk) 32
7.1. The cell and its evolution 33
7.2. Cell membranes 33
7.3. Electrostatic properties of biomembranes 34
7.4. Mobility of membrane components 35
7.5. Membrane fusion 36
7.6. Principal functions of cells and their membranes 37
8. Measurement of viscosity (J. Vackářová) 42
9. Microviscosity of lipid membranes (L. Koláčná, F. Varga, E. Amler) 48
10. Computer modeling of proteins (L. Koláčná, F. Varga, E. Amler) 55
11. Image analysis (H. Kolářová, L. Koláčná, E. Amler) 60
12. Principles of medical radiology – theoretical introduction (J. Heřmanská, F. Varga) 72
12.1. Structure of matter 72
12.2. Radioactivity 75
12.3. Interaction of ionizing radiation with matter 80
12.4. Detection of ionizing radiation 86
12.5. Principal quantities and units used in dosimetry and radiation protection 88
12.6. Dosimetry and protection against ionizing radiation 89
13. Radioactivity and the principles of radiation protection 92
14. Spectrometry of gamma-radiation 92
15. Measurement of X-ray spectrum 94
16. Measurement of penetrating power and distinction ability of imaging using x-rays 94
17. Measurement and description of the differential spectrum of a selected radionuclide 95
18. Measurement of air radioactivity 96
19. Measurement of dependence of the density of radiation flow and dose rate on the source-detector distance 96
20. Biosignals (P. Heřman) 97
20.1. Theoretical introduction 97
20.2. Introduction to exercises 98
21. Examination of blood pressure 111
22. Examination of body surface 113
23. Electrocardiography 114
24. Examination of variability of heart frequency 116
Apendix Fundamental SI units 117
