

CONTENTS

1	Introduction	5
2	Improvement of navigation conditions on the lower Labe in the section Střekov–state border CR/FRG	8
3	Děčín Barrage	13
4	Method of hydraulic research	18
5	Research of the barrage on a hydraulic model with fixed bed	20
	5.1 Subject of research	20
	5.2 Hydraulic model	20
	5.3 Barrage lay-out	21
	5.4 Investigation of the dividing walls of the lock approaches	22
	5.5 Nautical experiments	24
6	Research of the barrage on a hydraulic model with movable bed	26
	6.1 Subject of research	26
	6.2 Adjustment of the hydraulic model	26
	6.3 Ensuring the stability of the barrage components	28
	6.4 Optimum procedure for the construction sequence of the barrage	29
7	Research of the hydraulic power plant and the flume fish pass	36
	7.1 Research problems	36
	7.2 Reconstruction of the hydraulic model	36
	7.3 Research of the in-and-outlet parts of the power plant	37
	7.4 Optimisation of the entrance and exit of the flume fish pass	44
	7.5 Nautical experiments	45
	7.6 Interaction of navigation and power production	47
	7.7 Conclusions	50
8	Optimisation of the waterway regulation in the reach downstream of the barrage	51
	8.1 Subject of research	51
	8.2 Hydraulic model	51
	8.3 Verification of the hydraulic model	53
	8.4 Optimisation of the river channel on the model with fixed bed	54
	8.5 Research of the existing state on the model with movable bed	55
	8.6 Research of the stability on the proposed changes on the model with movable bed	57
	8.7 Nautical experiments	58
	8.8 Conclusions	59
9	Influence of the Děčín barrage on the environment	60
	9.1 Influence on the urban environment above the barrage	60
	9.2 Influence on the countryside downstream of the barrage	62
	9.3 Influence on the German section of the Labe (Elbe)	63
10	References	65
