

CONTENTS

CONTENTS		3
1	OVERVIEW	7
1.1	Preface	7
1.2	Acknowledgements	7
1.3	Role of Mechanics of Materials and Solid Mechanics in Design	7
2	SIMPLE STRESS AND STRAIN	13
2.1	Load	13
2.2	Direct or Normal Stress (σ)	15
2.3	Direct or Normal Strain (ε)	15
2.4	Sign Convention for Direct Stress and Strain	16
2.5	Saint-Venant's Principle	16
2.6	Elastic materials - Hooke's Law for Direct Stress and Strain	17
2.7	Modulus of Elasticity - Young's Modulus for Direct Stress and Strain	18
2.8	Tensile Test	19
2.9	Ductile Materials	22
2.10	Brittle Materials	23
2.11	Hyper-Elastic Materials (Elastomers)	23
2.12	Normal Forces (N.F.)	24
2.13	Reactions	25
	Example 2.1	25
2.14	Stress, Strain and Elongation in Pure Tension or Compression	26
2.15	Temperature Stresses, Strains and Elongations	28
2.16	Gravity Load in Axial Direction	30
	Example 2.2	30
2.17	Poisson's Ratio	32
2.18	Application of Poisson's Ratio to a Two-Dimensional Stress System	33
2.19	Volume Change	34
2.20	Strain Energy	35
2.21	Shear Stress	37
2.22	Shear Strain.	37
2.23	Modulus of Rigidity - Shear Modulus	38
2.24	Allowable Working Stress - Factor of Safety	38
2.25	Stress Concentrations	39
2.26	Stress-Concentration Factors in Pure Tension or Compression	40
	Example 2.3	41
	Example 2.4	42
2.27	Trusses	44
2.28	Ideal Plane Trusses	45
	Example 2.5	46
2.29	Castigliano's Theorem in Pure Tension or Compression	48
	Example 2.6	49
2.30	Examples	51
	Example 2.7	51

Example 2.8	54
Example 2.9	57
Example 2.10	59
Example 2.11	61
Example 2.12	64
Example 2.13	65
3 SHEARING FORCE AND BENDING MOMENT DIAGRAMS	67
3.1 Summary	67
3.2 Beams	68
3.3 Supports	70
3.4 Reactions	72
Example 3.1	72
Example 3.2	73
Example 3.3	74
Example 3.4	74
3.5 Shearing Force (S.F.) and Bending Moment (B.M.)	75
3.6 (S.F.) Sign Convention	76
3.7 (B.M.) Sign Convention	77
3.8 (S.F.) and (B.M.) Diagrams	77
3.9 (S.F.) and (B.M.) Diagrams for Cantilever Beams	77
Example 3.5	78
Example 3.6	79
3.10 (S.F.) and (B.M.) Diagrams for Simple Supported Beams	80
Example 3.7	80
Example 3.8	82
Example 3.9	84
3.11 Relationship between (S.F.), (B.M.) and Intensities q and m	85
3.12 Examples	88
Example 3.10	88
Example 3.11	88
Example 3.12	88
Example 3.13	88
Example 3.14	88
Example 3.15	88
4 SIMPLE BENDING OF STRAIGHT BEAMS	97
4.1 Summary	97
4.2 Introduction	99
4.3 Centroids and First Moments of Plane Areas	100
Example 4.1	101
4.4 Simple Bending Theory	102
4.5 Neutral Axis (N.A.)	105
4.6 Maximal Stress and Section Modulus W_0	107
4.7 Second Moments and Products of Inertia of Areas	108
Example 4.2	109
Example 4.3	110

	Example 4.4	110
	Example 4.5	111
4.8	Parallel Axis Theorem	112
	Example 4.6	113
4.9	Principal Second Moments of Areas	114
	Example 4.7	117
4.10	Strain Energy in Simple Bending	120
4.11	Stress-Concentrations in Bending	120
4.12	Stress-Concentration Factors in Bending	121
	Example 4.8	123
4.13	Examples	124
	Example 4.9	124
5	SLOPE AND DEFLECTION OF STRAIGHT BEAMS	126
5.1	Summary	126
5.2	Introduction	127
5.3	Relationship between Slope, Deflection and Curvature of Beams	127
5.4	Differential Equations for Deflection of Beams	129
5.5	Direct integration Method	131
	Example 5.1	133
	Example 5.2	135
	Example 5.3	138
	Example 5.4	139
5.6	Direct Integration Method Applied for Statically Indeterminate Beams	143
	Example 5.5	144
5.7	Principle of Superposition	148
	Example 5.6	148
5.8	Maxwell's Theorems of Reciprocal Displacements	150
	Example 5.7	152
5.9	Energy methods	153
5.10	Castigliano's Theorems	153
5.11	Castigliano's First Theorem for Deflection of Beams	154
	Example 5.8	158
5.12	Castigliano's Second Theorem for Slope of Beams	158
	Example 5.9	159
5.13	Use of Fictitious Force and Fictitious Moment in the Castigliano's Theorems	160
	Example 5.10	160
5.14	Castigliano's Theorems Applied for Statically Indeterminate Beams	162
	Example 5.11	163
	Example 5.12	164
5.15	Examples	166
	Example 5.13	166
	Example 5.14	167
6	APPENDIX	169
6.1	Solution of the Supported Beam via FEM Software ANSYS	169
6.2	Printout of the Programme (for ANSYS Software)	170

6.3	Calculation of Maximal Bending Stress (Probabilistic Assessment) via AntHill Software	171
6.4	Printout of the Programme (for AntHill Software)	175
