

# CONTENTS

<b>Preface</b>	<b>9</b>
<b>1 Sets</b>	<b>13</b>
1.1 Naive set theory . . . . .	13
1.1.1 Set descriptions . . . . .	14
1.1.2 Set operations . . . . .	15
1.2 Axiomatic set theory . . . . .	18
1.2.1 Paradoxes of the naive set theory . . . . .	18
1.2.2 Sets and classes . . . . .	19
1.2.3 Alternative set theory . . . . .	20
1.3 Mappings . . . . .	21
1.4 Cardinality of sets . . . . .	24
1.5 Fuzzy sets . . . . .	28
<b>2 Relations, graphs, operations, algebras and structures</b>	<b>33</b>
2.1 Relations . . . . .	33
2.1.1 A relation with the generally different domains . . . . .	34
2.1.2 Relations on a set . . . . .	40
2.2 Binary relations, priorities and orders . . . . .	41
2.2.1 Attributes of the binary relation . . . . .	41
2.2.2 Equivalence . . . . .	43
2.2.3 The relation of preference and order . . . . .	44
2.2.4 The methods to describe relations . . . . .	48
2.2.5 The partial dimension order . . . . .	50
2.2.6 Preferences with non-differentiable relations . . . . .	51

2.3	Graphs . . . . .	54
2.3.1	Directed and not directed graphs . . . . .	54
2.3.2	Some of the elementary properties of graphs . . . . .	57
2.3.3	Diagrams of graphs, graph isomorphism . . . . .	58
2.3.4	The valued graphs . . . . .	60
2.3.5	Walks, trails and paths . . . . .	61
2.3.6	Some special graphs . . . . .	63
2.3.7	The representation of graph by data for computation . . . . .	66
2.4	Operations, algebras and theories . . . . .	71
2.4.1	Operations . . . . .	71
2.4.2	Algebras and theories . . . . .	73
2.4.3	Structures . . . . .	77
<b>3</b>	<b>Information, data, codes</b>	<b>80</b>
3.1	The concept of information . . . . .	80
3.1.1	The principals of Shannon information theory . . . . .	80
3.1.2	The principles of semantic information theory . . . . .	83
3.2	Information, data, and coding . . . . .	87
3.2.1	Data and their interpretation . . . . .	87
3.2.2	Data redundancy and data protection . . . . .	89
3.3	Data encryption and cryptography . . . . .	91
3.3.1	Monoalphabetical ciphering . . . . .	94
3.3.2	Polyalphabetical ciphering . . . . .	94
3.3.3	Asymmetrical ciphering . . . . .	95
<b>4</b>	<b>Formal languages and grammars</b>	<b>98</b>
4.1	The alphabet, word and language . . . . .	98
4.1.1	The alphabet . . . . .	99
4.1.2	Words . . . . .	99
4.1.3	Language . . . . .	101
4.2	Grammars . . . . .	101
4.3	The Chomsky grammar hierarchy . . . . .	105
4.3.1	The type 0 grammar . . . . .	105
4.3.2	The type 1 grammar . . . . .	106
4.3.3	The type 2 grammar . . . . .	107
4.3.4	The type 3 grammar . . . . .	107
4.4	The derivation tree . . . . .	109

<b>5 Formal computation models</b>	<b>116</b>
5.1 The finite automaton and their modifications . . . . .	117
5.1.1 The Mealy automaton . . . . .	125
5.1.2 The Moore automaton . . . . .	125
5.1.3 The non-deterministic finite automaton . . . . .	127
5.1.4 The Nerode theorem . . . . .	130
5.2 Regular expressions and languages . . . . .	132
5.3 Pushdown automaton . . . . .	137
5.3.1 The deterministic pushdown automaton . . . . .	139
5.3.2 The non-deterministic pushdown automaton . . . . .	141
5.4 The Turing machine . . . . .	143
5.4.1 Decision making and recognizing languages by the Turing machine . . . . .	147
5.5 The computability theory . . . . .	150
5.5.1 Recursive and partial recursive functions . . . . .	151
5.6 RASP machines . . . . .	153
5.7 Petri nets . . . . .	154
<b>6 Computational complexity</b>	<b>158</b>
6.1 Numerical stability of an algorithm . . . . .	158
6.2 Time and space complexity: A practical and theoretical perspective . . . . .	160
6.2.1 Asymptotic estimation of function growth. Symbols: $O$ , $o$ and $\Theta$ . . . . .	160
6.2.2 The typical classes of computational complexity of algorithms . . . . .	163
6.2.3 A theoretical view of complexity . . . . .	166
6.2.4 A practical view of complexity . . . . .	167
6.2.5 Pessimistic and average complexity . . . . .	168
6.2.6 An example how an algorithm adjustment can influence the time complexity . . . . .	169
6.3 P-difficult, NP-difficult, and NP-complete problems . .	175
6.3.1 Deterministic and non-deterministic complexity of problems . . . . .	177
<b>7 Examples of algorithms analysis</b>	<b>188</b>
7.1 The divide and conquer principle . . . . .	188
7.2 Searching and insertion . . . . .	195
7.3 Ordering . . . . .	200

7.3.1 Tag sort algorithms . . . . .	203
7.3.2 Associative sorting algorithm . . . . .	204
7.3.3 Hybrid sorting algorithms . . . . .	209
7.4 Optimization problems . . . . .	211
7.4.1 Linear programming problem . . . . .	212
7.4.2 Mountain Climbing algorithm . . . . .	216
7.4.3 The gradient method . . . . .	217
7.4.4 Knapsack problem . . . . .	222
7.5 Optimization graph-problems . . . . .	223
7.5.1 The shortest path graph-problem . . . . .	224
7.5.2 Problem of minimal skeleton for connected graph	227
7.5.3 Maximum flow problem . . . . .	229
7.5.4 Matching and problem of minimal connectivity of a graph . . . . .	233
<b>8 Nontraditional computation procedures</b>	<b>238</b>
8.1 Heuristics . . . . .	238
8.2 Tree loping . . . . .	239
8.3 Evolution algorithms . . . . .	240
<b>Annex</b>	<b>246</b>
A.1 MST problem in historical context . . . . .	246
A.2 MST problem in present terminology . . . . .	252
A.2.1 Borůvka's solution . . . . .	252
A.2.2 Jarník's solution . . . . .	255
A.2.3 Kruskal's soulution . . . . .	258
A.3 Summary . . . . .	259
A.4 Annex references . . . . .	260
<b>Bibliography</b>	<b>262</b>
<b>Index</b>	<b>267</b>
