Contents

1 Introduction and Examples **1**

1.1 One-Dimensional Examples 1

1.2 Forced Oscillators 7

1.3 Singular Perturbations: The Van der Pol Oscillator 10

2 Bifurcations and Unfolding **13**

2.1 Invariant Sets of Planar Flows 13

2.1.1 Equilibrium Points 15

2.1.2 Periodic Orbits 18

2.1.3 The Poincaré–Bendixson Theorem 21

2.2 Structurally Stable Vector Fields 23

2.2.1 Definition of Structural Stability 23

2.2.2 Peixoto's Theorem 24

2.3 Singularities of Codimension 1 26

2.3.1 Saddle–Node Bifurcation of an Equilibrium 29

2.3.2 Hopf Bifurcation 32

2.3.3 Saddle–Node Bifurcation of a Periodic Orbit 34

2.3.4 Global Bifurcations 36

2.4 Local Bifurcations of Codimension 2 39

2.4.1 Pitchfork Bifurcation 39

2.4.2 Takens–Bogdanov Bifurcation 41

2.5 Remarks on Dimension 3 45

3 Regular Perturbation Theory **49**

3.1 Preliminaries 50

3.1.1 Hamiltonian Systems 50

3.1.2 Basic Estimates 55

3.2 Averaging and Iterative Methods 57

3.2.1 Averaging 57

3.2.2 Iterative Methods 61

3.2.3 Lie–Deprit Series 63

3.3 Kolmogorov–Arnol'd–Moser Theory 67

3.3.1 Normal Forms and Small Denominators 68

3.3.2 Diophantine Numbers 71

3.3.3 Moser's Theorem 73

3.3.4 Invariant Curves and Periodic Orbits 77

3.3.5 Perturbed Integrable Hamiltonian Systems 81

4 Singular Perturbation Theory **85**
4.1 Slow Manifolds 86
4.1.1 Tihonov's Theorem 87
4.1.2 Iterations and Asymptotic Series 91
4.2 Dynamic Bifurcations 95
4.2.1 Hopf Bifurcation 95
4.2.2 Saddle–Node Bifurcation 99
