Foreword	Page
1 Design of steel structures	
1.1 Introduction to structural design	9
1.2 Evaluation of sustainability	10
1.3 Structure of structural steel standards	13
1.4 Reliability in design standards	20
1.5 European standards for execution	22
1.6 Assessment of existing structures	24
2 General rules and rules for buildings	
2.1 General	29
2.2 Basis of design	31
2.3 Materials	33
2.4 Durability	38
2.5 Structural analysis	38
2.5.1 Structural modelling for analysis	38
2.5.2 Global analysis	39
2.5.3 Imperfections	42
2.5.4 Methods of analysis considering material non-linearities	49
2.5.5 Classification of cross sections	51
2.5.6 Cross-section requirements for plastic global analysis	54
2.6 Ultimate limit state	55
2.6.1 General	55
2.6.2 Resistance of cross-sections	55
2.6.2.1 General	55
2.6.2.2 Section properties	56
2.6.2.3 Tension	58
2.6.2.4 Compression	59
2.6.2.5 Bending moment	60
2.6.2.6 Shear	60
2.6.2.7 Torsion	62
2.6.2.8 Bending moment and shear	64
2.6.2.9 Bending and axial force	65
2.6.2.10 Bending, shear and axial force	67
2.6.3 Buckling resistance of members	68
2.6.3.1 Uniform members in compression	68
2.6.3.2 Uniform members in bending	73
2.6.3.3 Uniform members in bending and axial compression	83
2.6.3.4 General method for lateral and lateral torsional buckling	86
2.6.3.5 Lateral torsional buckling of members with plastic hinges	87
2.6.4 Uniform built-up compression members	89
2.6.4.1 General	89
2.6.4.2 Laced compression members	91
2.6.4.3 Battened compression members	93
2.6.4.4 Closely spaced built-up members	95
2.7 Serviceability limit state	96
2.7.1 General conditions	96
2.7.2 Ultimate limit states for buildings	96
3 Connections design	
3.1 Introduction	103
3.2 Basis of design	103
3.3 Connections made with bolts, rivets or pins	105

3.3.1	Bolts, nuts and washers	105
3.3.2	Rivets	105
3.3.3	Anchor bolts	105
3.3.4	Categories of bolted connections	105
3.3.5	Positioning of holes for bolts and rivets	107
3.3.6	Design resistance of individual fasteners	108
3.3.7	Group of fasteners	111
3.3.8	Long joints	111
3.3.9	Slip-resistant connections using 8.8 or 10.9 bolts	112
3.3.10	Deductions for fastener holes	113
3.3.11	Prying forces	115
3.3.12	Distribution of forces between fasteners at the ultimate limit state	116
3.3.13	Connections made with pins	116
3.4	Welded connections	116
3.4.1	General	116
3.4.2	Welding consumables	116
3.4.3	Geometry and dimensions	117
3.4.4	Welds with packings	119
3.4.5	Design resistance of a fillet weld	119
3.4.6	Design resistance of fillet welds all round	121
3.4.7	Design resistance of butt welds	121
3.4.8	Design resistance of plug welds	122
3.4.9	Distribution of forces	123
3.4.10	Connections to unstiffened flanges	123
3.4.11	Long joints	124
3.4.12	Eccentrically loaded fillet or partial penetration butt welds	124
3.4.13	Angles connected by one leg	125
3.5	Analysis, classification and modelling	125
3.6	Open sections joints	126
3.7	Hollow section joints	127
4	Worked examples	
4.1	Selection of material for fracture toughness	132
4.2	Selection of material for lamellar tearing	136
4.3	Tensile chord of truss girder from angles	136
4.4	Design of column with intermediate supports	137
4.5	Secondary beam laterally restrained	140
4.6	Cantilever beam bending	142
4.7	Portal frame	144
4.8	Built-up battened member	156
4.9	Lateral torsional buckling of beams	160
4.9.1	LTBeam software	161
4.9.2	Cantilever beam design	166
4.9.3	Transversal support of the upper flange of an end cross-section	169
4.9.4	Beam with end moments and transversal load	170
4.9.5	Beam with end moments, transversal load and intermediate support	173
4.10	Torsion of open cross-section member	176
4.11	Torsion of hollow cross-section member	182
4.12	Bolted connection of double angle bar	185
4.13	Welded connection of double angle bar	187
4.14	Header plate connection	188
4.15	Fin plate connection	189
