

CONTENTS

Z. Bayer:	Remarks on one form of the simple equation of state formulated as truncated polynomials	7
M. Beneš:	Towards the quantitative analysis of the phase-field model of phase transitions	9
P. Demo, Z. Kožíšek:	On the transient heterogeneous nucleation: preliminary results	15
W. Garen, M. Becker, G. Paál:	Condensation phenomena behind incident and reflected shock waves in heavy vapors at low Mach numbers	19
J. Hrubý:	On the determination of the critical cluster size	25
A. Leipertz:	Determination of the thermophysical properties of transparent fluids by laser spectroscopy	31
	Thermophysical properties of fluids by light scattering	41
K. N. H. Looijmans, M. E. H. van Dongen:	Homogeneous nucleation and droplet growth in the coexistence region of n-alkane/methane mixtures at high pressures	49
K. N. H. Looijmans, P. C. Kriesels, M. E. H. van Dongen:	Gasdynamic aspects of a modified expansion-shock tube for nucleation and condensation studies	51
K. N. H. Looijmans, C. C. M. Luijten, G. C. J. Holmans, M. E. H. van Dongen:	Classical binary nucleation theory applied to the real mixture n-nonane/methane at high pressures	55

F. Maršík, P. Sopuch, J. Blaha:	Application of the principle of minimum entropy production to condensation shock waves	63
V. Petr, M. Kolovratník:	Measurement of liquid phase in 200 MW LP steam turbine	71
V. Ždímal, Jiří Smolík:	Homogeneous nucleation rates of n-propanol. Effect of the total pressure	83
