

Contents

R. DE Borst	
Finite elements and their use in models	1
M. Okrouhlík	
Fundamentals of continuum mechanics	13
Background	14
Kinematics	30
Finite deformations and strain tensors	41
Rigid-body motion	68
Motion and flow	78
Stress tensors	88
Understanding the corotational stress	98
Conservation laws	107
Incremental strain and stress measures	116
References	127
C. Höschl	
Pitfalls of finite element modelling	128
M. Křížek	
Finite element method	142
M. Prager	
Boundary element method	174
Jiří Plešek	
Constitutive models	183
Integrating constitutive relations	205
Solution of nonlinear equilibrium problems: The quasi-Newton methods	216
Z. H. Zhong, J. Dobiáš, S. Pták	
Contact-Impact Problems	227

This project was supported by

Institute of Thermomechanics
Czech Society for Mechanics

Grant agency of the Czech Republic No. 101/93/0277
Central European Association for Computational Mechanics
