|--|-----|
| <i>Hoffmann, R.; Kordon, U.</i> Recent advances in speech technology at TU Dresden | 9 |
| <i>Eichner, M.</i> Speech recognition and speech synthesis using common databases | 12 |
| <i>Schnell, K.; Lacroix, A.</i> Nonlinear prediction for speech analysis and synthesis | 14 |
| <i>Romportl, J.; Matoušek, J.</i> Development of data-driven prosody model for German TTS synthesis | 18 |
| <i>Hedbávná, B.</i> Identification of Czech vowels from connected speech without context | 24 |
| <i>Studenovský, D.</i> Change of Formants in the course of Czech diphthong [ou̯] | 31 |
| <i>Janoušková, J.</i> Intonational phrasing in contemporary Czech prose. A preliminary study | 37 |
| <i>Duběda, T.</i> Investigating stylized prosodic contours in Czech | 41 |
| <i>Votrubec, J.</i> Using morphological tagger for learning prosody | 48 |
| <i>Horák, P.; Chaloupka, Z.</i> Prosody modelling possibilities of the Epos TTS using the MBROLA interface | 54 |
| <i>Strecha, G.; Duckhorn, F.; Feldmann, U.</i> Pitch Period Detection Based On Complex Harmonic Filter Analysis (CHFA) | 59 |
| <i>Přibil, J.; Přibilová, A.</i> Experiments with speaking styles transposition using linear time scale mapping of F0 contour | 64 |
| <i>Matoušek, J.</i> On minimizing the size of speech unit database in concatenative speech synthesis | 70 |
| <i>Rosales, H. G.</i> Evaluation of smoothing methods for segment concatenation based speech synthesis | 77 |
| <i>Chaloupka, Z.; Horák, P.</i> Using Festival residual LPC inventories in the Epos TTS | 84 |
| <i>Hanzlíček, Z.</i> On residual prediction in voice conversion task | 90 |
| <i>Pollák, P.; Volín, J.; Skarnitzl, R.</i> Analysis of glottal stop presence in large speech corpus and influence of its modelling on segmentation accuracy | 98 |
| <i>Zetocha, P.; Tučková, J.</i> Classification of speech disorders of children with developmental dysphasia | 105 |
| <i>Koula, I.; Esposito, A.</i> Noise cancellation algorithms for speech signal distorted in telecommunication networks | 113 |

| | |
|---|-----|
| <i>Vondra, M.; Vich, R.</i> Comb filtering in speech enhancement | 120 |
| <i>Stejskal, V.; Smékal, Z.; Esposito, A.</i> Spectral flatness method based empty pause detection in noisy and clean speech conditions | 125 |
| <i>Čermák, J.; Araki, S.; Sawada, H; Makino, S.</i> Musical noise reduction in time-frequency-binary-masking-based blind source separation systems | 131 |
| <i>Tychtl, Z.</i> Architecture of the new system for searching in huge multimedia databases | 137 |
| <i>Bořil, H.; Fousek, P.; Sündermann, D.; Červa, P.; Žďánský, J.</i> Lombard speech recognition: A comparative study | 141 |
| <i>Rajnoha, J; Pollák, P.</i> Modelling of speaker non-speech events in robust speech recognition | 149 |
| <i>Nouza, J.</i> An introductory course on speech processing for undergraduate students | 156 |
| <i>Silovský, J.; Červa, P.</i> Study on the speaker recognition aided broadcast stream transcription | 162 |
| <i>Chaloupka, J.</i> Multimodal speech processing and recognition for the creation of the communicative-interactive systems | 167 |
| <i>Drábková, J.; Nejedlová, D.</i> Class-based language model application for Czech language | 173 |
| <i>Bergl, P.</i> Comparison of eight methods for measurement of divergence in spectra of signals | 181 |
