

C O N T E N T S

1.	Productivity, turnover and production processes in characteristic natural and economically important ecosystems	
1.1.	Woodland ecosystems	
1.1.1.	Productivity and turnover in a stand of spruce (Picea excelsa)	
	FOIT V., KREČMER V., PEŘINA V., ZAKOPAL V. : Research on the primary productivity of spruce stand (Picea excelsa Lk)	3
	ŠIKA A.: Horizontal distribution of roots in norway spruce forest	7
	MATERNA J.: Contribution to the study of the circulation of nutrients in forest ecosystems	11
	VINŠ B.: Two-stage automatic recording of data of measur. machines	13
	The list of published papers referring to research theme 1.1.1. Primary productivity:	16
1.1.2.	Primary and secondary productivity of a lowland forest	
	VYSKOT M.: Production analysis of a lowland forest in the region of Lednice in South Moravia	19
	PELIŠEK J.: An ecological research of soil environment conducted in the lowland forest region near Lednice, South Moravia, in 1968-1969..	23
	BUREŠ F.: The formation of yield in oats in the fodder crops rotation	27
	BUREŠ F.: Investigation on yield formation in fodder sugar beet in fodder crop rotation	28
	ŠTAMBERA J., PETŘÍKOVÁ Kristína: Growth analysis of two tomato varieties	31
	ZEJDA J., HOLIŠOVÁ Věra: On the prebaiting of small mammals in estimation of their abundance	33
	The list of published papers referring to research theme 1.1.2. Primary productivity	35
	Secondary productivity	36
1.2.	Grassland ecosystems	
1.2.1.	Primary and secondary productivity, turnover and production processes in alluvial meadows	
2.2.2.	BALÁTOVÁ-TULÁČKOVÁ Emilie: Plant sociological and synecological characteristics of the Lanžhot meadows (South Moravia)	39
	JAKRLOVÁ Jana: The mineral composition of plant cover in Lanžhot meadows (South Moravia)	43
	HÁJKOVÁ Alena and KVĚT J.: Analysis of primary productivity in two types of inundated meadows	47
	GLOSER J.: Photosynthetic activity of some meadow grasses	51
	ÚLEHLOVÁ Blanka: Mineralization and immobilization of nitrogen in soils of alluvial meadow plant communities with different water regime and with different plant matter production	53
	TESAŘOVÁ Marta: Cellulose decomposition in soils of some alluvial meadow plant communities.....	57
	RUSEK J.: Research on soil mesofauna in three types of lowland meadows.....	61
	The list of published papers referring to research theme 1.2.1 Primary productivity.....	63
	Secondary productivity	64
1.3.	Wetland ecosystems	
1.3.1.	Primary and secondary productivity and production processes in littoral reedswamp communities	
2.2.3.	HEJNÝ S1.: Plant sociological and synecological characteristics of the reed communities in South Bohemian and South Moravian fishponds..	65

DYKYJOVÁ Dagmar, KVĚT J.: Comparison of biomass production in reedswamp communities growing in South Bohemia and South Moravia	71
ONDOK J.P.: Horizontal structure of reed stand (<i>Phragmites communis</i> Trin) and its production aspects	81
KVĚT J., SVOBODA J.: Development of vertical structure and growth analysis in a stand of <i>Phragmites communis</i> Trin.	84
ONDOK J.P., DYKYJOVÁ Dagmar, PŘIBÁŇ K.: Vertical structure and light penetrating into the reed stand during seasonal ontogenesis	89
ONDOK J.P., PŘIBÁŇ K.: Seasonal dynamics of the production in reed stand (<i>Phragmites communis</i> Trin.) determined by non-destructive method ..	91
FIALA K.: Rhizome biomass and its relation to shoot biomass and stand pattern in eight clones of <i>Phragmites communis</i> Trin.	95
FIALA K.: Seasonal changes in the growth of the underground organs in <i>Typha latifolia</i> L.	99
DYKYJOVÁ Dagmar, VÉBR K., PŘIBÁŇ K.: Production and root/shoot ratio of dominant reedswamp species growing in outdoor summer hydroponic cultures	101
DYKYJOVÁ Dagmar: Comparative biometry of <i>Phragmites communis</i> ecotypes and its significance to investigation of reed stands productivity	105
PAZOUREK J.: The gradients of the stomatal frequency in successive leaves of <i>Phragmites communis</i> Trin. in South Bohemia	111
PAZOUREK J.: The density of stomata in various ecotypes of <i>Phragmites communis</i> Trin., in different habitats	113
PAZOUREK J.: Quantitative changes of some anatomical characteristics in leaves of <i>Iris hollandica</i> var. <i>Wedgwood</i> , caused by various light intensity	115
HUSÁK Š. and KVĚT J.: Productive structure of <i>Phragmites communis</i> and <i>Typha angustifolia</i> stands after cutting at two different levels	117
KVĚT J.: Destruction of reed stands by grey-legged goose	121
PELIKÁN J., SVOBODA J., KVĚT J.: Relationship between the population of muskrats (<i>Ondatra zibethica</i>) and the primary production of cattail (<i>Typha latifolia</i>)	125
HOLIŠOVÁ Věra: Trophic requirements of the water vole, <i>Arvicola terrestris</i> Linn. in reed stands	129
HAVLÍN J.: Natural production of waterfowl on the Náměštské (rybníky) ponds	131
POKORNÝ V.: The influencing of reed (<i>Phragmites communis</i> Trin.) by gall forming diptera of the genus <i>Lipara neig.</i>	135
The list of published papers referring to research theme 1.3.1. Primary productivity:	137
Secondary productivity:	138

2. Production processes

2.1.1.	Biological fixation of nitrogen in rhizobia of legumes	
2.1.2.	and in blue-green algae	
	HAMATOVÁ Eva: Symbiotic fixation in legumes. Effectivity of rhizobium	139
	HAMATOVÁ Eva: Collection of rhizobium cultures	141
	MAREČKOVÁ Hana: Transformation in <i>Rhizobium japonicum</i>	145
	ŠKRDLETA V.: Papers published on the symbiotic fixation of nitrogen	146
	The list of published papers referring to research theme 2.1.1.	148
	KOMÁREK J., PŘIBIL S.: The development of filaments of <i>Nostoc calicicola</i> in cultures	149
2.2.1.	Tests of photosynthetic activity	
	KVĚT J. (Ed.): Progress in the IBP project Czechoslovakia PP-P/1: Initial level experiments	
	BÍNOVÁ Jana, ONDOK J.P.: The sequential sowing experiments at Třeboň	151
	KOSTREJ A., REPKA J.: The sequential sowing experiments at Nitra	155

	BÍNOVÁ Jana: Phenometric measurements on sunflower at Třeboň	157
	The list of published papers referring to research theme 2.2.1.	158
	BITTERMAN M.: The solar shape of plant surfaces. (An indication of optimal shape of greenhouse roofs and windows)	159
2.2.4.	ŠETLÍK I.: Analysis of photosynthetic productivity in algal cultures under various conditions	167
2.2.5.	Changes of photosynthetic activity during the ontogenesis of the leaf apparatus with special reference to the water balance	
	HODÁŇOVÁ Danuše: Photosynthetic rate and chlorophyll content as related to leaf age and ontogenesis of sugar-beet plants	175
	HODÁŇOVÁ Danuše: Canopy structure and photosynthetic rate as related to different leaf age	179
	TICHÁ Ingrid: Growth characteristics of <i>Plectranthus fruticosus</i> plants in two types of controlled climate	181
	TICHÁ Ingrid: Insertion gradients of leaf area and photosynthetic ratio in plants of different age	185
	The list of published papers referring to research theme 2.2.3.	187
2.2.6.	Photosynthetic productivity and yield formation in cereals	189
	NÁTR L.: The relationship between rate of photosynthesis and N.P.K. concentration in leaves	189
	ŠKOPIK P., GIBALA O.: The relationship between the concentration and the ratio of phosphoric acid and nitrogen in plants at the beginning of vegetation to the yield of cereals	191
	BEZDĚK V., FLAŠAROVÁ Marie: The level of mineral nutrients in the overground part of plants in the production processes of winter wheat ..	193
	KOPECKÝ M.: The influence of the intensity of solar radiation on the K ₂ O intake and on the formation of the yield of summer barley	195
	PŘIKRYL K.: The influence of both nitrogenous nutrition and the variety on the relation between the dynamics of growth and the grain production of summer barley	197
	PEŠÍK J.: The effect of the morphoregulative preparation CCC on wheat under different weather conditions.....	199
	ULMAN L.: Investigation of the time of application of nitrogen to oats..	201
	ULMAN L.: Investigation of the time of application of nitrogen to winter rye	203
	KOUSALOVÁ Ivana: Studies of internal factors affecting the yield of winter wheat	205
	PEŠÍK J.: The influence of certain factors of the external environment on the productivity of winter wheat	209
	ZEMÁNEK M.: Dry matter production and water relations after application of decenylsuccinic acid (DSA) ¹ on wheat plants	211
	HUBÍK E.: The influence of water and soda-water sprinkling and increased CO ₂ concentration in the canopy on photosynthetic production of wheat varieties	215
	The list of published papers referring to research theme 2.2.6	217
2.2.7.	Analysis of growth and yield formation of important crops in different regions of Czechoslovakia	
	BAIER J.: Photosynthetic production of crops as depending on mineral nutrition	219
	BAIER J., SMETÁNKOVÁ M.: The influence of ecological factors on the uptake of nutrients and their utilization for photosynthetic production	221
	SMETÁNKOVÁ Milena: Varietal differences in the uptake of nutrients and their utilization for photosynthetic production	223
	ČERNÝ V., VRKOČ F., KRÍŠTAN F., STRNAD P.: Yield formation in crop rotations in ecologically different regions of Bohemia as affected by cultivation practices	225
	The list of published papers referring to research theme 2.2.7	228
Contents:	230
