

# CONTENTS IN FULL

Abbreviations

<b>1</b>	<b>Genomes and the flow of biological information</b>	<b>1</b>
	Introduction	1
1.1	The roots of biology	1
1.2	The genome: a working blueprint for life	5
1.3	Bringing genes to life: gene expression	9
1.4	Regulating gene expression	12
1.5	Cellular infrastructure and gene expression	15
1.6	Expression of the genome	18
1.7	Evolution of the genome and the tree of life	21
<b>2</b>	<b>Biological molecules</b>	<b>30</b>
	Introduction	30
2.1	Atoms, molecules, and chemical bonds	31
2.2	Life in aqueous solution	35
2.3	Non-covalent interactions	37
2.4	Nucleotides and nucleic acids	40
2.5	The structure of DNA	45
2.6	Chemical properties of RNA	53
2.7	RNA folding and structure	56
2.8	The RNA world and its role in the evolution of modern-day life	58
2.9	Fundamentals of protein structure	61
2.10	Protein folding	65
2.11	Protein folds	70
2.12	Protein–DNA interactions	72
2.13	Sugars and carbohydrates	74
2.14	Lipids	76
2.15	Chemical modification in biological regulation	80
<b>3</b>	<b>The chemical basis of life</b>	<b>86</b>
	Introduction	86
3.1	Thermodynamic rules in biological systems	86
3.2	Binding equilibria and kinetics	94
3.3	Binding processes in biology	98
3.4	Enzyme catalysis	104
3.5	Enzyme kinetics	111
<b>4</b>	<b>Chromosome structure and function</b>	<b>117</b>
	Introduction	117
4.1	Organization of chromosomes	118
4.2	The cell cycle and chromosome dynamics	120

4.3	Packaging chromosomal DNA	123
4.4	Variation in chromatin structure	130
4.5	Covalent modifications of histones	131
4.6	Nucleosome remodeling complexes	137
4.7	DNA methylation	139
4.8	Elements required for chromosome function	143
4.9	The centromere	144
4.10	The telomere	148
4.11	The separation of chromatin domains by boundary elements	150
4.12	Chromosome architecture in the nucleus	153
<b>5</b>	<b>The cell cycle</b>	<b>165</b>
	Introduction	165
5.1	Steps in the eukaryotic cell cycle	165
5.2	Cyclins and Cdks	169
5.3	Regulation of Cdk activity	174
5.4	Cell cycle regulation by Cdks	176
5.5	Regulation of proteolysis by Cdks	178
5.6	Checkpoints: intrinsic pathways that can halt the cell cycle	183
5.7	Extrinsic regulators of cell cycle progression	186
5.8	The cell cycle and cancer	188
5.9	The bacterial cell cycle	190
<b>6</b>	<b>DNA replication</b>	<b>200</b>
	Introduction	200
6.1	Overview of DNA replication	200
6.2	DNA polymerase: its mechanism of action	207
6.3	Initiation: origin binding and unwinding	209
6.4	Initiation: priming and strand elongation	215
6.5	Elongation: fidelity of DNA polymerases	220
6.6	Elongation: coordinating leading and lagging strand synthesis at the fork	225
6.7	Termination of DNA replication	231
6.8	Regulation of the initiation of replication in <i>E. coli</i>	238
6.9	Regulation of the initiation of replication in eukaryotes	240
6.10	The end-replication problem and telomerase	244
6.11	Replicating through chromatin in eukaryotes	250
<b>7</b>	<b>Chromosome segregation</b>	<b>257</b>
	Introduction	257
7.1	The stages of mitosis	257
7.2	Chromosome condensation and cohesion	259
7.3	The mitotic spindle	265
7.4	Prometaphase and metaphase	272
7.5	Anaphase: an irreversible step in chromosome segregation	278
7.6	The completion of mitosis and cytokinesis	285
7.7	Meiosis: generating haploid gametes from diploid cells	287
7.8	Chromosome segregation in bacteria	295

<b>8</b>	<b>Transcription</b>	<b>305</b>
	Introduction	305
8.1	Overview of transcription	305
8.2	RNA polymerase core enzyme	308
8.3	Promoter recognition in bacteria and eukaryotes	311
8.4	Initiation of transcription and transition to an elongating complex	324
8.5	Transcription elongation	330
8.6	Transcription termination	335
<b>9</b>	<b>Regulation of transcription</b>	<b>341</b>
	Introduction	341
9.1	Principles of transcription regulation	341
9.2	DNA-binding domains in proteins that regulate transcription	346
9.3	Mechanisms for regulating transcription initiation in bacteria	351
9.4	Competition between $\text{cI}$ and $\text{Cro}$ and control of the fate of bacteriophage $\lambda$	356
9.5	Regulation of transcription termination in bacteria	362
9.6	Regulation of transcription initiation and elongation in eukaryotes	366
9.7	Combinatorial regulation of eukaryotic transcription	371
9.8	The role of signaling cascades in the regulation of transcription	374
9.9	Gene silencing	376
<b>10</b>	<b>RNA processing</b>	<b>385</b>
	Introduction	385
10.1	Overview of RNA processing	385
10.2	tRNA and rRNA processing	388
10.3	tRNA and rRNA nucleotide modifications	393
10.4	mRNA capping and polyadenylation	395
10.5	RNA splicing	398
10.6	Eukaryotic mRNA splicing by the spliceosome	403
10.7	Exon definition and alternative splicing	410
10.8	RNA editing	416
10.9	Degradation of normal RNAs	422
10.10	Degradation of foreign and defective RNAs	425
10.11	RNA-binding domains in proteins	428
<b>11</b>	<b>Translation</b>	<b>434</b>
	Introduction	434
11.1	Overview of translation	434
11.2	tRNA and the genetic code	436
11.3	Aminoacyl-tRNA synthetases	439
11.4	Structure of the ribosome	444
11.5	The translation cycle: the ribosome in action	448
11.6	Protein factors critical to the translation cycle	452
11.7	Translation initiation: shared features in bacteria and eukaryotes	457
11.8	Bacterial translation initiation	458
11.9	Eukaryotic translation initiation	460

305	11.10	Translation elongation: decoding, peptide bond formation, and translocation	465
305	11.11	Translation termination, recycling, and reinitiation	470
305	11.12	Ribosome rescue in bacteria and eukaryotes	475
308	11.13	Recoding: programmed stop codon read-through and frameshifting	484
311	11.14	Antibiotics that target the ribosome	490
324	<b>12</b>	<b>Regulation of translation</b>	<b>498</b>
330	4.10	Introduction	498
332	12.1	Global regulation of translation initiation in bacteria and eukaryotes	498
341	12.2	Regulation of translation initiation by <i>cis</i> -acting sequences in the 5' untranslated region in bacteria and eukaryotes	501
341	12.3	Regulation of translation initiation through <i>cis</i> -acting sequences in the 3' UTR in eukaryotes	506
346	12.4	Regulation of translation elongation in bacteria and eukaryotes	512
351	12.5	Viral corruption of the translational machinery	514
356	<b>13</b>	<b>Regulatory RNAs</b>	<b>520</b>
362	4.4	Introduction	520
366	13.1	Overview of regulatory RNAs	523
371	13.2	Bacterial base-pairing sRNAs	525
374	13.3	Eukaryotic sRNAs: miRNAs, siRNAs, and piRNAs	528
376	13.4	Processing of eukaryotic sRNAs	529
382	13.5	Loading of Argonaute family proteins with eukaryotic sRNAs	539
386	13.6	Gene silencing by small eukaryotic RNAs	542
386	13.7	Viral defense by the CRISPR systems in bacteria and archaea	549
388	13.8	RNA-mediated regulation in <i>cis</i>	557
388	13.9	Protein-binding regulatory RNAs	560
393	13.10	Long intergenic non-coding RNAs	562
396	<b>14</b>	<b>Protein modification and targeting</b>	<b>573</b>
398	4.5	Introduction	573
403	14.1	Chaperone-assisted protein folding	573
410	14.2	Targeting of proteins throughout the cell	578
416	14.3	Post-translational cleavage of the polypeptide chain	582
422	14.4	Covalent rearrangements yield a fluorescent protein	584
426	14.5	Lipid modification of proteins	586
428	14.6	Glycosylation of proteins	592
434	14.7	Protein phosphorylation, acetylation, and methylation	595
434	14.8	Protein modification by nucleotides	603
434	14.9	Direct chemical modification of proteins	606
438	14.10	Ubiquitination and sumoylation of proteins	608
438	14.11	Protein degradation	615
444	<b>15</b>	<b>Cellular responses to DNA damage</b>	<b>622</b>
446	7.4	Introduction	622
452	7.5	Types of DNA damage	623
457	15.1	Types of DNA damage	623
458	15.2	Post-replication mismatch repair	627
460	15.3	Repair of DNA damage by direct reversal	630

15.4	Repair of DNA damage by base excision repair	631
15.5	Nucleotide excision repair of bulky lesions	632
15.6	Translesion DNA synthesis	635
15.7	The DNA damage response	637
15.8	The DNA damage response in bacteria	641
15.9	The DNA damage response in eukaryotes	644
15.10	DNA damage and cell death in mammalian cells	655

## **16 Repair of DNA double-strand breaks and homologous recombination** **664**

	Introduction	664
16.1	An overview of DNA double-strand break repair and homologous recombination	665
16.2	Double-strand break repair by NHEJ	667
16.3	Homology-directed repair of double-strand breaks	669
16.4	Generation of single-stranded DNA by helicases and nucleases	672
16.5	The mechanism of DNA strand pairing and exchange	676
16.6	Gene conversion through homology-directed repair	679
16.7	Homologous recombination	685
16.8	Repair of damaged replication forks by homology-directed repair	699
16.9	Chromosome rearrangements during aberrant recombination and repair	702

## **17 Mobile DNA** **711**

	Introduction	711
17.1	Transposable elements: overview	718
17.2	An overview of DNA-only transposons	719
17.3	The mechanism of DNA-only cut-and-paste transposition	724
17.4	DNA cut-and-paste transposition in adaptive immunity	736
17.5	Retrotransposons	737
17.6	LTR retrotransposons	740
17.7	Non-LTR retrotransposons: LINEs, SINEs, and Group II mobile introns	744
17.8	Transposable elements in the human genome	748
17.9	Control of transposition	756
17.10	CSSR: overview	760
17.11	CSSR systems that control gene expression	763
17.12	CSSR conversion of DNA dimers to monomers	766
17.13	Bacteriophage lambda integration and excision	

## **18 Genomics and genetic variation** **777**

	Introduction	777
18.1	Genome sequences and sequencing projects	778
18.2	Finding functions in a genome	781
18.3	Functional genomics	785
18.4	High-throughput genome-wide -omics projects	796
18.5	The evolving genome: evolutionary forces	798
18.6	The evolving genome: mechanisms of variation	800
18.7	Gene duplication and divergence of gene function	807
18.8	Reorganization of chromosomes	810

631	18.9	Epigenetics and imprinting	811
632	18.10	Human genome variation	812
633	18.11	Human genetic diseases: finding disease loci	815
637	18.12	Human genetics: impacts and implications	825

**19 Tools and techniques in molecular biology 835**

655		Introduction	835
655	19.1	Model organisms	836
655	19.2	Cultured cells and viruses	845
664	19.3	Amplification of DNA and RNA sequences	849
664	19.4	DNA cloning	854
668	19.5	Undirected genome manipulation	861
668	19.6	Directed genome manipulation	864
667	19.7	Detection of biological molecules	873
669	19.8	Separation and isolation of biological molecules	878
672	19.9	Identifying the composition of biological molecules	887
676	19.10	Obtaining and analyzing sequences on a genomic scale	894
679	19.11	Detection of specific DNA sequences	901
682	19.12	Detection of specific RNA molecules	907
689	19.13	Detection of specific proteins	913
702	19.14	Detection of interactions between molecules	916
711	19.15	Genome-wide detection of interactions between molecules	923
711	19.16	Imaging cells and molecules	927
711	19.17	Molecular structure determination	936
711		Glossary	947
711		Index	969

**14 Protein modification and targeting 573**

738		Introduction	573
737		Non-LTR retrotransposons: LINEs, SINEs, and Group II introns	573
740	14.1	Chaperones and protein folding	573
744	14.2	Targeting of proteins throughout the cell	578
748	14.3	Post-translational cleavage of the polypeptide chain	582
758	14.4	Covalent rearrangements and protein expression	584
760	14.5	Lipid modification of proteins	585
763	14.6	Glycosylation of proteins	592
766	14.7	Protein phosphorylation	595
777	14.8	Protein modification and genetic variation	606
777	14.9	Direct chemical modification of proteins	606
778	14.10	Genome sequences and sequencing projects	608
781	14.11	Finding functions in a genome	618
785	14.12	Functional genomics	623
