

Contents

Preface	xiii
Acknowledgments	xvii
Resources that accompany this book	xix
Chapter 1 Introduction: materials – history and character	1
1.1 Materials, processes and choice	2
1.2 Material properties	3
1.3 Design-limiting properties	12
1.4 Summary and conclusions	13
1.5 Further reading	13
1.6 Exercises	13
Chapter 2 Family trees: organising materials and processes	15
2.1 Introduction and synopsis	16
2.2 Organising materials: the materials tree	16
2.3 Organising processes: the process tree	19
2.4 Process–property interaction	22
2.5 Material property charts	23
2.6 Computer-aided information sources for materials and processes	25
2.7 Summary and conclusions	26
2.8 Further reading	26
2.9 Exercises	27
Chapter 3 Strategic thinking: matching material to design	31
3.1 Introduction and synopsis	32
3.2 The design process	32
3.3 Material and process information for design	35
3.4 The strategy: translation, screening, ranking and documentation	37
3.5 Examples of translation	40
3.6 Summary and conclusions	43
3.7 Further reading	44
3.8 Exercises	44

Chapter 4 Elastic stiffness, and weight: atomic bonding and packing	47
4.1 Introduction and synopsis	48
4.2 Density, stress, strain and elastic moduli	48
4.3 The big picture: material property charts	59
4.4 Manipulating the modulus and density	60
4.5 The science: microstructure and properties	64
4.6 Atomic structure and interatomic bonding	65
4.7 Atomic and molecular packing in solids: the origin of density	76
4.8 Interatomic bonding and properties: the origin of elastic modulus	83
4.9 Summary and conclusions	90
4.10 Further reading	91
4.11 Exercises	91
Chapter 5 Stiffness-limited design	97
5.1 Introduction and synopsis	98
5.2 Standard solutions to elastic problems	98
5.3 Material indices for elastic design	108
5.4 Plotting limits and indices on charts	116
5.5 Case studies	118
5.6 Summary and conclusions	125
5.7 Further reading	126
5.8 Exercises	126
Chapter 6 Beyond elasticity: plasticity, yielding and ductility	133
6.1 Introduction and synopsis	134
6.2 Strength, ductility, plastic work and hardness: definition and measurement	134
6.3 The big picture: charts for yield strength	140
6.4 Drilling down: the origins of strength and ductility	143
6.5 Manipulating strength	153
6.6 Summary and conclusions	162
6.7 Further reading	163
6.8 Exercises	163
Chapter 7 Strength-limited design	169
7.1 Introduction and synopsis	169
7.2 Standard solutions to plastic problems	170
7.3 Material indices for yield-limited design	179
7.4 Case studies	184
7.5 Summary and conclusions	190
7.6 Further reading	190
7.7 Exercises	191

Chapter 8 Fracture and fracture toughness	203
8.1 Introduction and synopsis	204
8.2 Strength and toughness	204
8.3 The mechanics of fracture	206
8.4 Material property charts for toughness	213
8.5 Drilling down: the origins of toughness	215
8.6 Compressive and tensile failure of ceramics	219
8.7 Manipulating properties: the strength–toughness trade-off	223
8.8 Summary and conclusions	226
8.9 Further reading	227
8.10 Exercises	227
Chapter 9 Cyclic loading and fatigue failure	231
9.1 Introduction and synopsis	232
9.2 Vibration: the damping coefficient	232
9.3 Fatigue	233
9.4 Charts for endurance limit	241
9.5 Drilling down: the origins of damping and fatigue	243
9.6 Manipulating resistance to fatigue	244
9.7 Summary and conclusions	246
9.8 Further reading	246
9.9 Exercises	247
Chapter 10 Fracture- and fatigue-limited design	255
10.1 Introduction and synopsis	256
10.2 Standard solutions to fracture problems	256
10.3 Material indices for fracture-safe design	259
10.4 Case studies	261
10.5 Summary and conclusions	274
10.6 Further reading	274
10.7 Exercises	275
Chapter 11 Friction and wear	281
11.1 Introduction and synopsis	282
11.2 Tribological properties	282
11.3 Charting friction and wear	285
11.4 The physics of friction and wear	288
11.5 Friction in design	292
11.6 Friction in material processing	296
11.7 Summary and conclusions	299
11.8 Further reading	299
11.9 Exercises	300

Chapter 12 Materials and heat	303
12.1 Introduction and synopsis	304
12.2 Thermal properties: definition and measurement	304
12.3 The big picture: thermal property charts	308
12.4 Drilling down: the physics of thermal properties	312
12.5 Manipulating thermal properties	317
12.6 Design and manufacture: using thermal properties	318
12.7 Summary and conclusions	328
12.8 Further reading	329
12.9 Exercises	330
Chapter 13 Diffusion and creep: materials at high temperatures	335
13.1 Introduction and synopsis	336
13.2 The temperature dependence of material properties	336
13.3 Charts for creep behaviour	342
13.4 The science: diffusion	344
13.5 The science: creep	352
13.6 Materials to resist creep	358
13.7 Design to cope with creep	361
13.8 Summary and conclusions	368
13.9 Further reading	368
13.10 Exercises	369
Chapter 14 Durability: oxidation, corrosion, degradation	379
14.1 Introduction and synopsis	380
14.2 Oxidation, flammability, and photo-degradation	381
14.3 Oxidation mechanisms	382
14.4 Resistance to oxidation	385
14.5 Corrosion: acids, alkalis, water, and organic solvents	386
14.6 Drilling down: mechanisms of corrosion	387
14.7 Fighting corrosion	396
14.8 Summary and conclusions	404
14.9 Further reading and software	405
14.10 Exercises	406
Chapter 15 Electrical materials: conductors, insulators, and dielectrics	411
15.1 Introduction and synopsis	412
15.2 Conductors, insulators, and dielectrics	413
15.3 Charts for electrical properties	420
15.4 Drilling down: the origins and manipulation of electrical properties	422
15.5 Design: using the electrical properties of materials	434
15.6 Summary and conclusions	440

15.7	Further reading	441
15.8	Exercises	441
Chapter 16 Magnetic materials		447
16.1	Introduction and synopsis	447
16.2	Magnetic properties: definition and measurement	448
16.3	The big picture: charts for magnetic properties	455
16.4	Drilling down: the physics and manipulation of magnetic properties	458
16.5	Materials selection for magnetic design	462
16.6	Summary and conclusions	470
16.7	Further reading	470
16.8	Exercises	471
Chapter 17 Materials for optical devices		475
17.1	Introduction and synopsis	476
17.2	The interaction of materials and radiation	476
17.3	Charts for optical properties	485
17.4	Drilling down: the physics and manipulation of optical properties	485
17.5	Optical design	492
17.6	Summary and conclusions	494
17.7	Further reading	495
17.8	Exercises	495
Chapter 18 Manufacturing processes and design		499
18.1	Introduction and synopsis	500
18.2	Process selection in design	501
18.3	Shaping processes: attributes for screening	504
18.4	Estimating cost for shaping processes	512
18.5	Case studies: selection of shaping processes	515
18.6	Joining processes: attributes for screening	520
18.7	Surface treatment (finishing) processes: attributes for screening	524
18.8	Technical evaluation	526
18.9	Additive manufacturing	539
18.10	Summary and conclusions	544
18.11	Further reading	544
18.12	Exercises	545
Chapter 19 Processing, microstructure and properties		551
19.1	Introduction and synopsis	552
19.2	Processing for properties	553
19.3	Microstructure evolution in processing	555

19.4	Metal shaping processes	569
19.5	Heat treatment and alloying of metals	573
19.6	Joining and surface treatment of metals	583
19.7	Powder processing	585
19.8	Polymer processing	587
19.9	Making hybrid materials	591
19.10	Summary and conclusions	593
19.11	Further reading	594
19.12	Exercises	595

Chapter 20 Materials, environment, and sustainability 599

20.1	Introduction and synopsis	600
20.2	Material production, material consumption, and growth	600
20.3	Natural Capital and the materials life cycle	604
20.4	Embodied energy and carbon footprint of materials	606
20.5	Materials and eco-design	614
20.6	Materials dependence	617
20.7	Materials and sustainable development	620
20.8	Summary and conclusions	623
20.9	Appendix: some useful quantities	623
20.10	Further reading	624
20.11	Exercises	625

Guided Learning Unit 1: Simple ideas of crystallography GL1-1

	Introduction and synopsis	GL1-2
PART 1	Crystal structures	GL1-2
PART 2	Interstitial space	GL1-9
PART 3	Describing planes	GL1-10
PART 4	Describing directions	GL1-12
PART 5	Ceramic crystals	GL1-14
PART 6	Polymer crystals	GL1-19
	Answers to exercises	GL1-20

Guided Learning Unit 2: Phase diagrams and phase transformations GL2-1

	Introduction and synopsis	GL2-2
PART 1	Key terminology	GL2-3
PART 2	Simple phase diagrams, and how to read them	GL2-6
PART 3	The iron–carbon diagram	GL2-22
PART 4	Interpreting more complex phase diagrams	GL2-26
PART 5	Phase transformations and microstructural evolution	GL2-33

PART 6	Equilibrium solidification	GL2-35
PART 7	Equilibrium solid-state phase changes	GL2-48
PART 8	Non-equilibrium solid-state phase changes	GL2-55
	Further reading	GL2-64
	Further exercises	GL2-64
Appendix A:	Data for engineering materials	A-1
Appendix B:	Corrosion tables	B-1
Appendix C:	Material properties and length scales	C-1
Index		I-1
