Contents

Chapter 1. Periodicity in max-min algebra 1
1.1. Matrices and orbits in max-min algebra 2
1.2. Periods of matrices and orbits 4
1.3. Threshold digraphs 8

Chapter 2. Computing matrix period in max-min algebra 13
2.1. Matrix period 14
2.2. Algorithm for matrix period 16
2.3. Balcer-Veinott's condensation algorithm 20

Chapter 3. Periods of special max-min matrices 21
3.1. Circulant matrices 21
3.2. Toeplitz matrices 29

Chapter 4. *NP*-hard problems in max-min algebra 35
4.1. Maximum Sequence Period (MSP) problem 35
4.2. Computing coordinate-orbit period 39

Chapter 5. Computing orbit period in max-min algebra 43
5.1. Polynomial reduction of walks 44
5.2. Algorithm for orbit period 52
5.3. Reducing computational complexity 63

Chapter 6. Reachability of the matrix period 73
6.1. Matrix Period Reachability (MPR) problem 74
6.2. *NP*-completeness of MPR 83
6.3. Reachability condition 90
6.4. Polynomially solvable cases of MPR 100

Chapter 7. Linear periodicity in max-plus algebra 105
7.1. Linear matrix period 105
7.2. Computing linear period of an irreducible matrix 111
7.3. Matrix Linear Periodicity (MLP) problem 118

Chapter 8. Computing linear matrix period 125
8.1. Polynomial algorithm for linear matrix period 126
8.2. Computing coordinate-linear period is *NP*-hard 131
8.3. Restricted MLP problem 133

Chapter 9. Linear periods of special matrices 137
9.1. Monge matrices 138
9.2. Circulant matrices 151
9.3. Toeplitz matrices 154

Chapter 10. Generalized periodicity 161
10.1. Matrix periods in distributive lattices 162
10.2. Generalized matrix period in max-plus algebra 166
