First Edition Acknowledgments xi
Second Edition Preface xiii
Second Edition Acknowledgments xv

I. THE PHENOMENOLOGY OF CHAOS 1

1 Three Chaotic Systems 3
1.1 Prelude 3
1.2 Linear and Nonlinear Systems 4
1.3 A Nonlinear Electrical System 8
1.4 A Mathematical Model of Biological Population Growth 17
1.5 A Model of Convecting Fluids: The Lorenz Model 27
1.6 Determinism, Unpredictability, and Divergence of Trajectories 37
1.7 Summary and Conclusions 39
1.8 Further Reading 40

2 The Universality of Chaos 47
2.1 Introduction 47
2.2 The Feigenbaum Numbers 47
2.3 Convergence Ratio for Real Systems 51
2.4 Using δ to Make Predictions 53
2.5 Feigenbaum Size Scaling 55
2.6 Self-Similarity 56
2.7 Other Universal Features 57
2.8 Models and the Universality of Chaos 58
2.9 Computers and Chaos 61
2.10 Further Reading 63
2.11 Computer Exercises 64

II. TOWARD A THEORY OF NONLINEAR DYNAMICS AND CHAOS 69

3 Dynamics in State Space: One and Two Dimensions 71
3.1 Introduction 71

3.2 State Space 72
3.3 Systems Described by First-Order Differential Equations 74
3.4 The No-Intersection Theorem 77
3.5 Dissipative Systems and Attractors 78
3.6 One-Dimensional State Space 79
3.7 Taylor Series Linearization Near Fixed Points 83
3.8 Trajectories in a One-Dimensional State Space 84
3.9 Dissipation Revisited 86
3.10 Two-Dimensional State Space 87
3.11 Two-Dimensional State Space: The General Case 91
3.12 Dynamics and Complex Characteristic Values 94
3.13 Dissipation and the Divergence Theorem 96
3.14 The Jacobian Matrix for Characteristic Values 97
3.15 Limit Cycles 100
3.16 Poincaré Sections and the Stability of Limit Cycles 102
3.17 Bifurcation Theory 106
3.18 Summary 113
3.19 Further Reading 114
3.20 Computer Exercises 116

4 Three-Dimensional State Space and Chaos 117

4.1 Overview 117
4.2 Heuristics 118
4.3 Routes to Chaos 121
4.4 Three-Dimensional Dynamical Systems 123
4.5 Fixed Points in Three Dimensions 124
4.6 Limit Cycles and Poincaré Sections 128
4.7 Quasi-Periodic Behavior 134
4.8 The Routes to Chaos I: Period-Doubling 136
4.9 The Routes to Chaos II: Quasi-Periodicity 137
4.10 The Routes to Chaos III: Intermittency and Crises 138
4.11 The Routes to Chaos IV: Chaotic Transients and Homoclinic Orbits 138
4.12 Homoclinic Tangles and Horseshoes 146
4.13 Lyapunov Exponents and Chaos 148
4.14 Further Reading 154
4.15 Computer Exercises 155

5 Iterated Maps 157

5.1 Introduction 157
5.2 Poincaré Sections and Iterated Maps 158
5.3 One-Dimensional Iterated Maps 163
5.4 Bifurcations in Iterated Maps: Period-Doubling, Chaos, and Lyapunov Exponents 166

5.5 Qualitative Universal Behavior: The *U*-Sequence 173
5.6 Feigenbaum Universality 183
5.7 Tent Map 185
5.8 Shift Maps and Symbolic Dynamics 188
5.9 The Gaussian Map 192
5.10 Two-Dimensional Iterated Maps 197
5.11 The Smale Horseshoe Map 199
5.12 Summary 204
5.13 Further Reading 204
5.14 Computer Exercises 207

6 Quasi-Periodicity and Chaos 210

6.1 Introduction 210
6.2 Quasi-Periodicity and Poincaré Sections 212
6.3 Quasi-Periodic Route to Chaos 214
6.4 Universality in the Quasi-Periodic Route to Chaos 215
6.5 Frequency-Locking 217
6.6 Winding Numbers 218
6.7 Circle Map 219
6.8 The Devil's Staircase and the Farey Tree 227
6.9 Continued Fractions and Fibonacci Numbers 231
6.10 On to Chaos and Universality 234
6.11 Some Applications 240
6.12 Further Reading 246
6.13 Computer Exercises 249

7 Intermittency and Crises 250

7.1 Introduction 250
7.2 What Is Intermittency? 250
7.3 The Cause of Intermittency 252
7.4 Quantitative Theory of Intermittency 256
7.5 Types of Intermittency and Experimental Observations 259
7.6 Crises 260
7.7 Some Conclusions 267
7.8 Further Reading 268
7.9 Computer Exercises 270

8 Hamiltonian Systems 272

8.1 Introduction 272
8.2 Hamilton's Equations and the Hamiltonian 273
8.3 Phase Space 276
8.4 Constants of the Motion and Integrable Hamiltonians 279
8.5 Nonintegrable Systems, the KAM Theorem, and Period-Doubling 289
8.6 The Hénon–Heiles Hamiltonian 296

8.7 The Chirikov Standard Map 303
8.8 The Arnold Cat Map 308
8.9 The Dissipative Standard Map 309
8.10 Applications of Hamiltonian Dynamics 311
8.11 Further Reading 313
8.12 Computer Exercises 316

III. MEASURES OF CHAOS 317

9 Quantifying Chaos 319

9.1 Introduction 319
9.2 Time-Series of Dynamical Variables 320
9.3 Lyapunov Exponents 323
9.4 Universal Scaling of the Lyapunov Exponent 327
9.5 Invariant Measure 330
9.6 Kolmogorov–Sinai Entropy 335
9.7 Fractal Dimension(s) 341
9.8 Correlation Dimension and a Computational Case History 354
9.9 Comments and Conclusions 368
9.10 Further Reading 369
9.11 Computer Exercises 374

10 Many Dimensions and Multifractals 375

10.1 General Comments and Introduction 375
10.2 Embedding (Reconstruction) Spaces 376
10.3 Practical Considerations for Embedding Calculations 383
10.4 Generalized Dimensions and Generalized Correlation Sums 389
10.5 Multifractals and the Spectrum of Scaling Indices $f(\alpha)$ 393
10.6 Generalized Entropy and the $g(\Lambda)$ Spectrum 404
10.7 Characterizing Chaos via Periodic Orbits 413
10.8 *Statistical Mechanical and Thermodynamic Formalism 415
10.9 Wavelet Analysis, q-Calculus, and Related Topics 420
10.10 Summary 421
10.11 Further Reading 422
10.12 Computer Exercises 429

IV. SPECIAL TOPICS 431

11 Pattern Formation and Spatiotemporal Chaos 433

11.1 Introduction 433
11.2 Two-Dimensional Fluid Flow 436
11.3 Coupled-Oscillator Models, Cellular Automata, and Networks 442

11.4 Transport Models 450
11.5 Reaction-Diffusion Systems: A Paradigm for Pattern Formation 460
11.6 Diffusion-Limited Aggregation, Dielectric Breakdown, and Viscous Fingering: Fractals Revisited 471
11.7 Self-Organized Criticality: The Physics of Fractals? 477
11.8 Summary 479
11.9 Further Reading 480
11.10 Computer Exercises 489

12 Quantum Chaos, The Theory of Complexity, and Other Topics 490

12.1 Introduction 490
12.2 Quantum Mechanics and Chaos 490
12.3 Chaos and Algorithmic Complexity 508
12.4 Miscellaneous Topics: Piece-wise Linear Models, Time-Delay Models, Information Theory, Stochastic Resonance, Computer Networks, Controlling and Synchronizing Chaos 510
12.5 Roll Your Own: Some Simple Chaos Experiments 517
12.6 General Comments and Overview: The Future of Chaos 517
12.7 Further Reading 519

Appendix A: **Fourier Power Spectra** 533
Appendix B: **Bifurcation Theory** 541
Appendix C: **The Lorenz Model** 547
Appendix D: **The Research Literature on Chaos** 559
Appendix E: **Computer Programs** 560
Appendix F: **Theory of the Universal Feigenbaum Numbers** 568
Appendix G: **The Duffing Double-Well Oscillator** 579
Appendix H: **Other Universal Features for One-Dimensional Iterated Maps** 584
Appendix I: **The van der Pol Oscillator** 589
Appendix J: **Simple Laser Dynamics Models** 598
