CONTENTS

1. Introduction 7
2. Methods used in the experiments 10
2.1. Collection of material and observations in free nature 10
2.2. Long-term field experiments 11
2.2.1. Breeding of small mammals and regulation of the way of nest construction 11
2.2.2. Nest parasitic arthopods used in the experiments, their origin and mode of work with them 12
2.2.3. Measuring of microclimate elements 13
2.2.4. Recording of measured values 14
2.2.5. Evaluation of records of microclimate 15
2.2.6. Methods used for the analysis of material of nidicolous mesostigmatid mites, synthesis of results and their biological interpretation 16
3. Results 17
3.1. Nests of small free-living terrestrial mammals from the western Carpathians 17
3.1.1. Characterization of nests of small free-living terrestrial mammals found in the region of the western Carpathians 17
3.1.2. Mesostigmatid mites in the nests of small terrestrial mammals from the region of the western Carpathians 21
3.1.3. Attempts at evaluation of interspecific relations of mesostigmatid mites in nests of *Clethrionomys glareolus* in the western Carpathians 23
3.2. Nest environment and nidicolous communities of the bank vole (*Clethrionomys glareolus*) in the field experiment 34
3.2.1. Experimental nests of *C. glareolus* in summer season 34
3.2.2. Microclimate in experimental nests of *C. glareolus* in winter season ... 59
3.3. Nest environment and community of nidicolous mesostigmatid mites of the European suslik (*Citellus citellus*) in a field experiment 62
3.3.1. Microclimate of nests of the European suslik (*Citellus citellus*) in a long-term field experiment 63
3.3.2. Mesostigmatid mites in experimental nests of the European suslik *(Citellus citellus)* 110
3.4. Analysis of interspecific relationships in mesostigmatid mites in the nests of *Clethrionomys glareolus* in free nature as a basis for the verification of general validity of previous results 126
4. Summary 138
5. References 141
