

Brief Contents

Preface	xix
Introduction	xxi
PART I BASIC NEUROSCIENCE AND RESEARCH METHODS	
1 Neuroanatomy	3
2 Neurophysiology and Basic Neurochemistry	41
3 Neuroendocrinology	57
4 Genetics	68
5 Animal Models of Human Behaviour and Mental Disorders	90
PART II PSYCHOPHARMACOLOGY	
6 General Principles of Psychopharmacology	101
7 Neurotransmitter Receptors and Postsynaptic Signalling Pathways	117
8 Physical Therapies	140
9 Biological Effects of Psychotherapy	146
PART III CLINICAL DISORDERS	
10 Schizophrenia and Related Disorders	153
11 Depression	184
12 Mania and Bipolar Disorder	202
13 Anxiety Disorders	213
14 Biology of Personality Disorders	229
15 Biology of Substance-Related Disorders	241
16 Eating Disorders and Disorders of Impulse Control	271
17 Mental Disorders of Childhood and Adolescence	282
18 Biology of Sexual and Gender Identity Disorders	300
19 Biology of Sleep Disorders	306
20 Ageing and Dementia	315
21 Neuropsychiatry	333
Afterword: The Future of Biological Psychiatry	355
Glossary: Biological and Neuroanatomical Terms and Methods	358
References	364
Index	381
