

	Preface	ix
1	Categories, Hierarchies, and Theories	1
	Categorization-Based Models	3
	The Theory-Theory	28
	Toward a Mechanistic Model of Semantic Knowledge	42
	Summary	46
2	A PDP Theory of Semantic Cognition	49
	The Rumelhart Feed-Forward Network	55
	Interpretation and Storage of New Information	63
	Inferences Based on New Semantic Information	66
	Discussion of the Rumelhart Network	69
3	Latent Hierarchies in Distributed Representations	83
	Simulation 3.1: Progressive Differentiation of Concept Representations	84
	Simulation 3.2: Simulating Loss of Differentiation in Dementia	104
	Summary of Basic Simulations	113
	Extended Training Corpus for Use in Subsequent Simulations	114
4	Emergence of Category Structure in Infancy	121
	A Brief Overview of the Literature	123
	Simulating Preverbal Conceptual Development in the Rumelhart Model	138
	Simulation 4.1: Capturing Conceptual Differentiation in Infancy	144
	Discussion	168
5	Naming Things: Privileged Categories, Familiarity, Typicality, and Expertise	175
	A PDP Account of Basic-Level Effects	182

Simulation 5.1: Learning with Basic Names Most Frequent	189
Simulation 5.2: Learning with All Names Equally Frequent	197
Simulation 5.3: Effects of the Attribute Structure of the Training Corpus	204
Conclusions from Simulations 5.1–5.3	209
Influences of Differential Experience with Objects and Their Properties: Familiarity and Expertise Effects	212
Simulation 5.4: Effects of Familiarity on Naming in Development and Dementia	212
Simulation 5.5: Domain-Specific Expertise	219
Simulation 5.6: Different Kinds of Expertise in the Same Domain	225
Generality of the Observed Simulation Results	229
6 Category Coherence	231
Category Coherence	236
Simulation 6.1: Category Coherence	240
Simulation 6.2: Illusory Correlations	250
Simulation 6.3: Category-Dependent Attribute Weighting	258
Summary of Findings	263
7 Inductive Projection and Conceptual Reorganization	265
Inductive Projection	269
Simulation 7.1: Inductive Projection and Its Differentiation in Development	270
Simulation 7.2: Differential Projection of Different Kinds of Properties	276
Reorganization and Coalescence	282
Simulation 7.3: Coalescence	283
Discussion	292
8 The Role of Causal Knowledge in Semantic Task Performance	297
The Role of Causal Properties of Objects in Semantic Cognition	302
Toward a PDP Account of Causal Knowledge and Causal Inference	309
The Basis of Explanations	327
Comparison of the PDP Approach with Theory-Based Approaches	338

9 Core Principles, General Issues, and Future Directions	347
Core Principles	347
Perspectives on General Issues in the Study of Cognition	367
Semantic Cognition in the Brain	376
Conclusion	380
Appendix A: Simulation Details	381
Appendix B: Training Patterns	393
Appendix C: Individuating Specific Items in the Input	399
Notes	403
References	407
Index	423
