

TABLE OF CONTENTS

INTRODUCTION.....	5
1. RECOMMENDED PROCEDURES FOR IDENTIFYING ACCIDENTS OF METALLIC MATERIALS.....	8
1.1 Basic information.....	9
1.2 Determination of actual working conditions.....	10
1.3 Macroscopic analyses.....	11
1.4 Microscopic analyses.....	16
1.5 Chemical analysis and determination of mechanical properties	22
2. REASONS OF ACCIDENTS DUE TO BRITTLE FRACTURE.....	25
2.1 Introduction	25
2.2 Theory of the formation of brittle fracture	27
2.3 Morphology/character of brittle fracture.....	36
2.4 Examples of accidents caused by brittle fracture.....	43
3. REASONS OF ACCIDENTS DUE TO FATIGUE FRACTURE.....	55
3.1 Introduction	55
3.2 Theory of the formation of fatigue fracture	58
3.2.1 Influence of stress magnitude σ and number of cycles N.....	59
3.2.2 Influence of surface roughness.....	62
3.2.3 Influence of geometry and design	68
3.2.4 Influence of temperature - thermal fatigue.....	69
3.2.5 Influence of corrosion - corrosion fatigue.....	71
3.3 Examples of accidents caused by fatigue fracture.....	73

4. REASONS OF ACCIDENTS DUE TO DUCTILE FRACTURE.....	77
4.1 Introduction.....	77
4.2 Theory of the formation of ductile fracture	78
4.3 Example of the cause of ductile fracture.....	85
5. REASONS CAUSES OF ACCIDENTS DUE TO CREEP	87
5.1 Introduction.....	87
5.2 Theory of the formation of creep fracture	88
5.3 Example of the formation of creep fracture	94
6. REASONS OF ACCIDENTS IN STEELS AFTER HEAT TREATMENT	99
6.1 Introduction.....	99
6.2 Reason of the formation heat treatment cracks in steels and their identification	100
6.3 Decarburization	109
6.4 Precipitation of carbides at grain boundaries.....	111
7. REASONS OF ACCIDENTS CAUSED BY CORROSION.....	115
7.1 Introduction.....	115
7.2 Basic theoretical principles of corrosion processes	116
7.3 Specific forms of corrosion and examples of accidents.....	120
7.4 Specific forms of electrochemical corrosion.....	133
ENGLISH-CZECH TECHNICAL TERMINOLOGY DICTIONARY.....	135
