Contents

Foreword xiii

Preface to the Second Edition xv

Preface to the First Edition xvii

1 Introduction 1
1.1 What Is Fuzzy Control? 1
1.2 Why Fuzzy Control? 2
1.3 Controller Design 3
1.4 Introductory Example: Stopping a Car 3
1.5 Nonlinear Control Systems 9
1.6 Summary 11
1.7 The Autopilot Simulator* 12
1.8 Notes and References* 13

2 Fuzzy Reasoning 17
2.1 Fuzzy Sets 17
2.1.1 Classical Sets 18
2.1.2 Fuzzy Sets 19
2.1.3 Universe 21
2.1.4 Membership Function 22
2.1.5 Possibility 24
2.2 Fuzzy Set Operations 25
2.2.1 Union, Intersection, and Complement 25
2.2.2 Linguistic Variables 28
2.2.3 Relations 30
2.3 Fuzzy If–Then Rules 33
2.3.1 Several Rules 35
2.4 Fuzzy Logic 36
2.4.1 Truth-Values 36
2.4.2 Classical Connectives 36
2.4.3 Fuzzy Connectives 39
2.4.4 Triangular Norms 41
2.5 Summary 43

2.6	Theoretical Fuzzy Logic*	43
	2.6.1 Tautologies	43
	2.6.2 Fuzzy Implication	45
	2.6.3 Rules of Inference	48
	2.6.4 Generalized Modus Ponens	51
2.7	Notes and References*	53
3	**Fuzzy Control**	**55**
3.1	The Rule Based Controller	56
	3.1.1 Rule Base Block	56
	3.1.2 Inference Engine Block	58
3.2	The Sugeno Controller	61
3.3	Autopilot Example: Four Rules	64
3.4	Table Based Controller	65
3.5	Linear Fuzzy Controller	68
3.6	Summary	70
3.7	Other Controller Components*	70
	3.7.1 Controller Components	70
3.8	Other Rule Based Controllers*	77
	3.8.1 The Mamdani Controller	77
	3.8.2 The FLS Controller	79
3.9	Analytical Simplification of the Inference*	80
	3.9.1 Four Rules	81
	3.9.2 Nine Rules	82
3.10	Notes and References*	84
4	**Linear Fuzzy PID Control**	**85**
4.1	Fuzzy P Controller	87
4.2	Fuzzy PD Controller	89
4.3	Fuzzy PD+I Controller	90
4.4	Fuzzy Incremental Controller	92
4.5	Tuning	94
	4.5.1 Ziegler–Nichols Tuning	94
	4.5.2 Hand-Tuning	96
	4.5.3 Scaling	99
4.6	Simulation Example: Third-Order Process	99
4.7	Autopilot Example: Stable Equilibrium	101
	4.7.1 Result	102
4.8	Summary	103
4.9	Derivative Spikes and Integrator Windup*	104
	4.9.1 Setpoint Weighting	104
	4.9.2 Filtered Derivative	105
	4.9.3 Anti-Windup	106
4.10	PID Loop Shaping*	106
4.11	Notes and References*	109

5	**Nonlinear Fuzzy PID Control**	**111**
5.1	Nonlinear Components	111
5.2	Phase Plot	113
5.3	Four Standard Control Surfaces	115
5.4	Fine-Tuning	118
	5.4.1 Saturation in the Universes	119
	5.4.2 Limit Cycle	119
	5.4.3 Quantization	120
	5.4.4 Noise	120
5.5	Example: Unstable Frictionless Vehicle	121
5.6	Example: Nonlinear Valve Compensator	124
5.7	Example: Motor Actuator with Limits	127
5.8	Autopilot Example: Regulating a Mass Load	127
5.9	Summary	130
5.10	Phase Plane Analysis*	130
	5.10.1 Trajectory in the Phase Plane	131
	5.10.2 Equilibrium Point	132
	5.10.3 Stability	132
5.11	Geometric Interpretation of the PD Controller*	134
	5.11.1 The Switching Line	137
	5.11.2 A Rule Base for Switching	140
5.12	Notes and References*	143
6	**The Self-Organizing Controller**	**145**
6.1	Model Reference Adaptive Systems	145
6.2	The Original SOC	147
	6.2.1 Adaptation Law	148
6.3	A Modified SOC	150
6.4	Example with a Long Deadtime	151
	6.4.1 Tuning	151
	6.4.2 Adaptation	153
	6.4.3 Performance	153
6.5	Tuning and Time Lock	155
	6.5.1 Tuning of the SOC Parameters	155
	6.5.2 Time Lock	156
6.6	Summary	157
6.7	Example: Adaptive Control of a First-Order Process*	157
	6.7.1 The MIT Rule	158
	6.7.2 Choice of Control Law	159
	6.7.3 Choice of Adaptation Law	159
	6.7.4 Convergence	160
6.8	Analytical Derivation of the SOC Adaptation Law*	161
	6.8.1 Reference Model	162
	6.8.2 Adjustment Mechanism	162
	6.8.3 The Fuzzy Controller	165
6.9	Notes and References*	169

7	**Performance and Relative Stability**	**171**
7.1	Reference Model	172
7.2	Performance Measures	177
7.3	PID Tuning from Performance Specifications	180
7.4	Gain Margin and Delay Margin	185
7.5	Test of Four Difficult Processes	186
	7.5.1 Higher-Order Process	186
	7.5.2 Double Integrator Process	187
	7.5.3 Process with a Long Time Delay	188
	7.5.4 Process with Oscillatory Modes	188
7.6	The Nyquist Criterion for Stability	188
	7.6.1 Absolute Stability	189
	7.6.2 Relative Stability	190
7.7	Relative Stability of the Standard Control Surfaces	191
7.8	Summary	193
7.9	Describing Functions*	193
	7.9.1 Static Nonlinearity	195
	7.9.2 Limit Cycle	197
7.10	Frequency Responses of the FPD and FPD+I Controllers*	198
	7.10.1 FPD Frequency Response with a Linear Control Surface	200
	7.10.2 FPD Frequency Response with Nonlinear Control Surfaces	201
	7.10.3 The Fuzzy PD+I Controller	203
	7.10.4 Limit Cycle	204
7.11	Analytical Derivation of Describing Functions for the Standard Surfaces*	206
	7.11.1 Saturation Surface	206
	7.11.2 Deadzone Surface	209
	7.11.3 Quantizer Surface	213
7.12	Notes and References*	216
8	**Fuzzy Gain Scheduling Control**	**217**
8.1	Point Designs and Interpolation	218
8.2	Fuzzy Gain Scheduling	219
8.3	Fuzzy Compensator Design	221
8.4	Autopilot Example: Stopping on a Hilltop	226
8.5	Summary	228
8.6	Case Study: the FLS Controller*	229
	8.6.1 Cement Kiln Control	229
	8.6.2 High-Level Fuzzy Control	231
	8.6.3 The FLS Design Procedure	233
8.7	Notes and References*	235
9	**Fuzzy Models**	**237**
9.1	Basis Function Architecture	238
9.2	Handmade Models	240
	9.2.1 Approximating a Curve	240
	9.2.2 Approximating a Surface	244

9.3 Machine-Made Models 249
9.3.1 Least-Squares Line Fit 249
9.3.2 Least-Squares Basis Function Fit 250
9.4 Cluster Analysis 253
9.4.1 Mahalanobis Distance 253
9.4.2 Hard Clusters, HCM Algorithm 257
9.4.3 Fuzzy Clusters, FCM Algorithm 260
9.5 Training and Testing 263
9.6 Summary 266
9.7 Neuro-Fuzzy Models* 267
9.7.1 Neural Networks 267
9.7.2 Gradient Descent Algorithm 268
9.7.3 Adaptive Neuro-Fuzzy Inference System (ANFIS) 273
9.8 Notes and References* 275

10 Demonstration Examples 277
10.1 Hot Water Heater 277
10.1.1 Installing a Timer Switch 278
10.1.2 Fuzzy P Controller 280
10.2 Temperature Control of a Tank Reactor 282
10.2.1 CSTR Model 283
10.2.2 Results and Discussion 285
10.3 Idle Speed Control of a Car Engine 287
10.3.1 Engine Model 287
10.3.2 Results and Discussion 288
10.4 Balancing a Ball on a Cart 292
10.4.1 Mathematical Model 293
10.4.2 Step 1: Design a Crisp PD Controller 297
10.4.3 Step 2: Replace it with a Linear Fuzzy 300
10.4.4 Step 3: Make it Nonlinear 300
10.4.5 Step 4: Fine-Tune it 301
10.5 Dynamic Model of a First-Order Process with a Nonlinearity 301
10.5.1 Supervised Model 302
10.5.2 Semi-Automatic Identification by a Modified HCM 304
10.6 Summary 307
10.7 Further State-Space Analysis of the Cart-Ball System* 307
10.7.1 Nonlinear Equations 313
10.8 Notes and References* 314

References 315
