

CONTENTS

PREFACE	xiii
1. HISTORICAL PERSPECTIVES	1
Hartig and the beginnings of forest pathology.....	1
Diagnosis of decay	2
Physico-chemical and morphological characteristics of decay	2
Cultural attributes of decay fungi	4
Aetiology, prevention and treatment	4
Identification of physiological requirements	5
Interaction with the biotic environment: decay community concepts	10
Environmental and biotechnological issues: future trends in wood-decay studies	11
Public awareness and amenity value	11
The future of forests	11
Decay and ecosystem functioning	12
Biotechnology and novel usages	12
2. WOOD AS AN ENVIRONMENT FOR FUNGAL GROWTH ...	14
Resource quality	15
Routes of access: gross anatomy of wood	15
Physico-chemical composition	25
Microclimate	40
Moisture content and aeration	40
Gaseous regimes	55
Temperature	57
3. QUANTIFICATION AND CHARACTERIZATION OF OCCURRENCE AND ACTIVITY OF WOOD-DECAY FUNGI	59
Analysis of patterns of occurrence	59
Direct methods	59
Indirect methods	66
Integration of direct and indirect procedures in the analysis of population and community structure.....	71

Identification of cultures	71
Problems	71
Diagnostic characters	73
Establishment of a database	85
Assessment of biomass	104
Assessment of activity	105
Detection of decay	105
Identification of processes	107
Quantification of state and rates of decay	112
4. IDENTITY AND ECOLOGICAL ROLES OF ORGANISMS IN DECAYING WOOD	116
Concepts of niche and ecological strategies in wood- inhabiting organisms	116
Spatial and activity domains	117
Ecological strategies	117
Mycelial fungi	119
Spatial and activity domains	119
Ecological strategies	125
Yeasts	129
Bacteria	130
Amoebae and myxomycetes	132
Multicellular animals	134
Direct digestion	135
Indirect effects on decomposer community structure and functioning	139
5. DEVELOPMENTAL CYCLES	145
Developmental variation and resource relations	145
Arrival modes	146
Establishment, exploitation and consolidation	159
Exit modes	163
Regulation of developmental modes	168
Regulation of vegetative development	169
Initiation of reproductive development	182
Control of fruit-body morphogenesis	187
6. BREEDING STRATEGIES AND VARIATION	190
Gene flow and mating systems	190
Outcrossing systems	192
Mechanisms of secondary mycelium formation	196
Inbreeding mechanisms	201
Non-outcrossing systems	201
Somatic incompatibility and the delimitation of individual genotypes	204

Occurrence and timing	205
Manifestation in wood	208
Genetic mechanisms	208
Physiological mechanisms	209
Relation to colonization patterns	209
Adaptation, diversification and speciation in Basidiomycotina	212
7. INTERSPECIFIC FUNGAL INTERACTIONS AND THEIR ROLE IN THE STRUCTURE AND DEVELOPMENT OF DECAY COMMUNITIES.....	215
Types and mechanisms of interactions	215
Hyphal interactions	217
Mycelial interactions	219
Effects of abiotic variables on interaction outcomes	223
Interactions and colonization strategies	225
Primary capture strategies.....	225
Secondary capture strategies	227
8. METABOLIC FUNCTIONING	231
Resource acquisition and requirements	231
General considerations	231
Primary uptake of water and solutes	233
Extracellular enzymes.....	239
Resource allocation and cycling.....	248
Evidence for relocation and economic usage of resources	248
Underlying mechanisms	253
Microenvironmental modification	258
Effects on wood structure and composition.....	258
Effects on microclimate	265
Detoxification	268
Rates of metabolism	268
Intrinsic differences within and between species	269
Interactions with microenvironment	271
9. GENERAL PATTERNS AND DYNAMICS OF WOOD PRODUCTION AND DECOMPOSITION IN NATURAL AND MAN-MADE ECOSYSTEMS	286
Wood production in natural ecosystems.....	286
Characteristics of major biome types	288
Gross patterns of production and biomass distribution	292
Spatio-temporal partitioning of biomass and NPP with respect to resource quality.....	292

Significance of wood decomposition to ecosystem functioning	302
Production in ecosystems exploited by man	312
Destructive exploitation of natural forest	312
Woodmanship	314
Plantation forestry	320
Amenity trees and orchards	324
Wood in man-made ecosystems	325
Timber in construction	326
Wood in ground contact	328
Timber in land transportation and packaging	329
Furniture, sports goods and musical instruments	329
Manufactured wood products	330
Wood in aquatic environments	331
10. COLONIZATION OF THE STANDING TREE	332
Heart rots	332
Modes of establishment and exit of heart-rot fungi.....	338
Selectivity of heart-rot fungi	344
Unspecialized opportunism	346
The theory of compartmentalization of decay in trees (CODIT).....	350
The theory of succession	352
Problems and alternatives: the effects of enrichment disturbance and aeration	352
Active pathogenesis	360
Ectotrophic root infection	361
Wound infection.....	375
Canker production	378
Specialized opportunism	380
Locations and modes of establishment	381
Some examples	389
Desiccation tolerance	395
Integration of colonization strategies during decay community development in a standing tree	398
Implications for management practices: sources of loss and options for control	399
Replanting	399
Wounding.....	403
Stress predisposition.....	406
11. COLONIZATION OF FALLEN AND CUT WOOD	410
Colonization of fallen wood	410
Non-unit-restricted fungi: cord- and rhizomorph-formers	411

Unit-restricted fungi	419
Colonization of cut wood	423
Colonization of cut stumps	423
Colonization of logs	428
Colonization of slash and brashing	434
Colonization of wood-chip piles	435
Colonization of sawdust	435
Colonization of burnt wood	435
12. COLONIZATION OF CONVERTED WOOD	437
Natural durability	437
Criteria and classifications of durability and their implications for usage of timber	437
Relationship between durability of wood in service and in the standing tree	442
Post-harvest colonization and treatments	442
Water storage	443
Seasoning	444
Preservative treatment	445
Fumigation	451
Biological control of decay in transmission poles	452
Colonization and decay of wood in service	452
Structural wood in buildings	453
Decay of external woodwork	463
Decay of composite wood-based board materials	468
Wood in ground contact	468
Mining timbers	470
Archaeological wood	472
Wood in water	473
REFERENCES	477
INDEX OF GENERIC AND SPECIFIC NAMES	542
SUBJECT INDEX	557
