

STOMATOLOGY FOR STUDENTS OF GENERAL MEDICINE

Table of contents

Foreword

1. Introduction (J. Kilian)	9
1.1 Classification of stomatology (dentistry)	9
1.2 Marking of teeth and dental surfaces	9
1.3 Stomatological examination	11
1.4 Development and eruption of teeth	12
2. Pediatric stomatology (J. Kilian)	13
2.1 Neonatal period	13
2.2 Infants and toddlers	14
2.3 Pre-school period and later childhood	14
2.4 Adolescence	16
2.5 Uncooperating children	16
3. Restorative (conservative) dentistry (R. Pišlová)	17
3.1 Diseases of hard dental tissues	17
3.1.1 Dental caries	17
3.1.2 Tooth wear	24
3.1.3 Developmental defects	24
3.1.3.1 Acquired developmental conditions	24
3.1.3.2 Hereditary developmental conditions	24
3.1.4 Trauma	25
3.2 Pulpal pathosis	25
3.2.1 Acute pulpitis	25
3.2.2 Chronic pulpitis	26
3.2.3 Necrosis - gangrena	26
3.3 Periapical pathosis	27
3.3.1 Acute apical periodontitis	27
3.3.2 Chronic apical periodontitis	29
4. Periodontal diseases (H. Houbová)	31
4.1 Etiology and pathogenesis	32
4.2 Classification of the periodontal diseases	32
4.2.1 Gingival diseases	32
4.2.2 Periodontitis	33
4.2.3 Gingival recession	34
4.3 Prevention and therapy of periodontal diseases	35
5. Diseases of the oral mucous membrane (H. Houbová)	37
5.1 Fundamental introduction to the etiology of diseases of the oral mucous membrane	37
5.2 Selected disorders of the oral mucous membrane, diagnosis, therapy	38
5.2.1 Viral infections	38
5.2.2 Mycotic infections	39

5. 2. 3	Specific inflammations	39
5. 2. 4	Oral symptoms of allergy and drug intolerance	40
5. 2. 5	Disorders of immune system reactions	40
5. 2. 6	Meaning of coating of tongue (fur)	41
5. 2. 7	Most common diseases of the vermillion border and lip angles	42
5. 2. 8	Manifestations of AIDS in the oral cavity	42
5. 2. 9	Profession-related changes in the oral cavity	43
6	Basics of dento-alveolar surgery (G. Pavlíková)	45
6. 1	Anaesthesia, analgesia and sedation in oral surgery	45
6. 1. 1	Local anaesthesia	45
6. 1. 2	General anaesthesia	45
6. 1. 3	Sedation	46
6. 2	Teeth extractions	46
6. 2. 1	Instruments	46
6. 2. 2	Complications during and after extraction	47
6. 2. 2. 1	Complications in the course of extraction	47
6. 2. 2. 2	Complications after extraction of teeth	48
6. 3	Complicated eruption of the third molars - dentitio difficilis, pericoronitis	48
6. 3. 1	Acute pericoronitis	48
6. 3. 2	Chronic pericoronitis	49
6. 4	Trismus	49
6. 5	Dento-facial infections	49
6. 6	Diseases of the cervico-facial lymphatic glands	50
6. 6. 1	Acute lymphadenitis	51
6. 6. 2	Chronic lymphadenitis	51
6. 6. 3	Specific lymphadenitis	51
6. 7	Ostitis and osteomyelitis of the jaw	51
6. 8	Actinomyces cervicofacialis	52
6. 9	Odontogenic fistula	53
6. 10	Cysts and cyst-like lesions in orofacial region	53
6. 11	Surgical therapy of complications of caries	54
6. 12	Salivary glands diseases	54
6. 12. 1	Function of salivary glands	54
6. 12. 2	Examination of salivary glands	55
6. 12. 3	Sialadenitis	55
6. 12. 4	Sialolithiasis	55
6. 12. 5	Sialosis	56
6. 13	Dental implants (J. Zemen)	56
7	Head injuries - injuries of the face, teeth and jaws (D. Hrušák)	59
7. 1	Introduction, aetiology of fractures, classification	59
7. 2	Clinical examination	59
7. 3	X-ray examination of the facial skeleton	60
7. 4	Complications of maxillofacial trauma	63
7. 5	First aid in trauma of the face	64
7. 6	Temporary fixation of the fractured bones and covering of open wounds	65
7. 7	Soft tissue injuries in the face and head	65
7. 8	Dentoalveolar injuries	66
7. 9	Bony injuries of the maxillofacial region	70
7. 10	Healing of fractures	71
7. 11	General principles of fracture treatment - reduction, fixation and immobilization	71
7. 12	Methods of osteosynthesis - surgical treatment of maxillofacial fractures	72
7. 13	Mandibular injuries - fractures, dislocation of condyles	74
7. 14	Injuries of the TMJ and fractures of the condyle and condylar neck	77
7. 15	Midface (maxillary) fractures, classification	78
7. 16	Features of fracture treatment in childhood	82
8	Tumours of the head and the neck (J. Walter)	85
8. 1	General oncology	85
8. 1. 1	Cancer	85
8. 2	Special oncology	89

8. 2. 1 Premalignant lesions	89
8. 2. 2 Benign mesenchymal tumours	89
8. 2. 3 Malignant blood-forming tissue tumours	90
8. 2. 4 Malignant mesenchymal tumours	91
8. 2. 5 Benign epithelial tumours	91
8. 2. 6 Malignant epithelial tumours - carcinomas	91
8. 2. 7 Tumours of salivary glands	92
8. 2. 8 Tumour-like lesions in oral and facial region	93
9. Dental prosthetics (E. Cimburá)	95
9. 1 Definition of prosthetics	95
9. 2 Fixed prosthodontics	96
9. 3 Partial removable dentures	98
9. 4 Complete dentures	101
9. 5 Cleft palate from the prosthetic aspect	102
10. Orthodontics (I. Šubrtová)	103
10. 1 Orthodontics (dentofacial orthopaedics)	103
10. 1. 1 Definition	103
10. 1. 2 Demand for orthodontic treatment	103
10. 2 Etiology of orthodontic anomalies	104
10. 2. 1 Genetic influences	104
10. 2. 2 Prenatal factors	104
10. 2. 3 Postnatal, environmental influences	104
10. 3 Diagnosis	105
10. 3. 1 Diagnostic examination	105
10. 3. 1. 1 Questioning and clinical examination of the patient	105
10. 3. 1. 2 Model examination	105
10. 3. 1. 3 Radiographs	105
10. 3. 1. 4 Consultative examination	106
10. 4 Classification of orthodontic anomalies	106
10. 4. 1 Dental anomalies	106
10. 4. 1. 1 Anomalies of the position (posture) of the teeth	106
10. 4. 1. 2 Anomalies in the number of teeth	107
10. 4. 1. 3 Anomalies in the size of teeth	107
10. 4. 1. 5 Anomalies in the shape of teeth	107
10. 4. 2 Anomalies of bite	107
10. 4. 2. 1 Frontal anomalies	107
10. 4. 2. 2 Lateral anomalies	108
10. 4. 3 Anomalies of the relationship of dental arches, Angle's classification	108
10. 4. 3. 1 Angle class I. normoocclusion, neutroocclusion	108
10. 4. 3. 2 Angle class II. distoocclusion	108
10. 4. 3. 3 Angle class III. mesioocclusion	109
10. 4. 4 Anomalies of the relationship of jaws, anomalies of the skeletal pattern	109
10. 4. 4. 1 Class 1 skeletal pattern	109
10. 4. 4. 2 Class 2 skeletal pattern	109
10. 4. 4. 3 Class 3 skeletal pattern	109
10. 5 Orthodontic therapy	109
10. 5. 1 Biological basis of orthodontic therapy	109
10. 5. 2 Methods of orthodontic care	111
10. 5. 2. 1 Intercceptive operation	111
10. 5. 2. 2 Therapy with orthodontic removable appliances	111
10. 5. 2. 3 Therapy with orthodontic fixed appliances	112
10. 5. 2. 4 Therapeutical methods combining orthodontic methods with methods from other stomatological disciplines	113
10. 5. 2. 5 Corrective jaw surgery	113
11. Dental treatment in compromised patients (R. Houba)	117
11. 1 Allergic reactions	117
11. 2 Cardiovascular complications	118
11. 3 Bleeding	118
11. 4 Enhanced susceptibility to infection and the immunosuppressive treatment	119

11.5 Impaired wound healing	119
11.6 Attack states	120
11.7 Risk of the transmission of viral infections between the patient and the dental staff	120
11.8 Other risks in compromised patients	120
11.9 Oncologic patients	120
12. Orofacial pain of nonmasticatory origin (J. Zemen)	123
12.1 Atypical facial pain	123
12.2 Trigeminal neuralgia	123
12.3 Glossopharyngeal neuralgia	123
12.4 Giant cell arteritis (temporal arteritis)	124
12.5 Periodic migrainous neuralgia (cluster headache)	124
13. Temporomandibular disorders (J. Zemen)	125
14. Odontogenic metastatic infection (J. Zemen)	127
