Pathological Features of Tumors of the Nervous System in Hereditary Cancer Predisposition Syndromes: A Review

Saber Tadros, Aleksei Kondrashov, Sriya Namagiri, Ashis Chowdhury, Yeshavanth Kumar Banasavadi-Siddegowda, Abhik Ray-Chaudhury

On the Cover

This month's cover shows a thoughtful neurosurgeon weighing the decision to perform a decompressive craniectomy or external lumbar CSF drainage (ELD) in a patient with high ICP. ELD has a long history of being a reliable means of reducing intracranial hypertension but has rarely been

used in TBI because of a theoretical risk of herniation. In collaboration with the Brain Trauma Foundation, an evidence-based review of ELD is presented showing safety and sustained efficacy in reducing high ICP in select severe TBI cases. Cover illustration, © Kenneth Xavier Probst, Xavier Studio, 2021. Read more on p. 395.
