|--|-----------|
| Preface | 11 |
| 1 Preliminaries | 15 |
| 1.1 Manifolds | 15 |
| 1.2 Vectors | 17 |
| 1.3 Tangent vectors | 18 |
| 1.4 Parameterisation | 19 |
| 1.5 Notation for forms | 20 |
| 1.6 Cross product | 20 |
| 1.7 Determinants | 21 |
| 1.7.1 The determinant of a 1×1 matrix | 21 |
| 1.7.2 The determinant of a 2×2 matrix | 22 |
| 1.7.3 The determinant of a 3×3 matrix | 23 |
| 1.7.4 The determinate of an $n \times n$ matrix, where $n > 3$ | 24 |
| 2 What are differential forms? | 25 |
| 2.1 0-forms | 26 |
| 2.2 1-forms | 26 |
| 2.2.1 The meaning of dx^i | 28 |
| 2.2.2 How this works – basis 1-forms and basis vectors | 28 |
| 2.2.3 dx^i picks out a vector's i th component | 30 |
| 2.2.4 An example using polar coordinates | 31 |
| 2.2.4.1 Calculating the basis vectors and 1-forms | 31 |
| 2.2.4.2 Tangent vectors to a circle | 33 |
| 2.2.5 Curves | 34 |
| 2.2.6 The differential df revisited | 35 |
| 2.2.6.1 $df(\mathbf{v})$ as an approximation to Δf | 36 |
| 2.2.6.2 Vectors as differential operators | 38 |
| 2.2.7 Another 1-form example | 41 |
| 2.3 2-forms | 42 |
| 2.3.1 The wedge product | 43 |
| 2.3.2 2-forms acting on two vectors | 46 |
| 2.3.3 2-form example | 49 |
| 2.3.4 Surfaces | 49 |
| 2.4 3-forms and higher | 50 |
| 2.4.1 3-forms acting on three vectors | 51 |
| 2.4.2 3-form example | 54 |
| 2.4.3 Three and higher dimensional spaces | 54 |

| | | |
|----------|--|------------|
| 3 | Converting between differential forms and vectors | 57 |
| 3.1 | 0-forms | 57 |
| 3.2 | 1-forms | 57 |
| 3.3 | 2-forms | 58 |
| 3.4 | 3-forms | 59 |
| 4 | Differentiation | 61 |
| 5 | Div, grad and curl | 65 |
| 5.1 | Gradient and 0-forms | 65 |
| 5.2 | Curl and 1-forms | 65 |
| 5.3 | Divergence and 2-forms | 67 |
| 5.4 | A couple of vector identities | 68 |
| 6 | Orientation | 69 |
| 7 | Integrating differential forms | 75 |
| 7.1 | Change of variables | 76 |
| 7.1.1 | The pullback | 79 |
| 7.2 | Defining the integral | 82 |
| 7.2.1 | <i>k</i> -form integrated over a <i>k</i> -dimensional manifold in \mathbb{R}^n , where <i>k</i> < <i>n</i> | 82 |
| 7.2.2 | <i>n</i> -form integrated over an <i>n</i> -dimensional manifold in \mathbb{R}^n | 84 |
| 7.2.3 | The recipe | 86 |
| 7.2.4 | Some examples | 86 |
| 7.3 | Independence of parameterisation | 92 |
| 7.3.1 | Parameterised curves | 92 |
| 7.3.2 | Parameterised surfaces | 93 |
| 8 | Integrating differential forms and vector calculus | 95 |
| 8.1 | Line integrals | 96 |
| 8.1.1 | Conservative vector fields | 98 |
| 8.1.2 | And with differential forms | 99 |
| 8.2 | Surface integrals | 100 |
| 8.2.1 | And with differential forms | 103 |
| 8.3 | Volume integrals | 105 |
| 8.3.1 | And with differential forms | 106 |
| 9 | The generalised Stokes' theorem | 107 |
| 9.1 | The gradient theorem | 108 |
| 9.1.1 | Generalised Stokes' theorem | 109 |
| 9.2 | Green's theorem | 110 |
| 9.2.1 | Generalised Stokes' theorem | 111 |
| 9.3 | Stokes' theorem | 112 |
| 9.3.1 | Generalised Stokes' theorem | 113 |

| | |
|--|------------|
| 9.4 Divergence theorem | 114 |
| 9.4.1 Generalised Stokes' theorem | 115 |
| 10 Maxwell's equations | 117 |
| 10.1 The vector calculus approach | 117 |
| 10.2 The differential forms approach | 120 |
| 10.2.1 The Hodge star operator | 120 |
| 10.2.2 Moving on | 121 |
| 10.2.3 Gauss's law for magnetism and Faraday's law | 122 |
| 10.2.4 Gauss's law and the Ampère-Maxwell law | 124 |
| 11 Three nice results from topology | 127 |
| 11.1 The drum theorem | 131 |
| 11.2 The Brouwer fixed-point theorem | 133 |
| 11.3 The hairy ball theorem | 135 |
| 11.3.1 Proof of Equation (11.3.2) | 139 |
| Bibliography | 143 |
| Index | 145 |
