

Contents

1 The climate system	1
1.1 Introduction: A definition of climate	1
1.2 Solar radiation and the energy budget of the Earth	3
1.3 Atmosphere and climate	6
1.3.1 Evolution of the atmosphere	6
1.3.2 Temperature structure	6
1.3.3 Pressure, composition, and temperature variations and dynamics	7
1.4 Ocean and climate	9
1.4.1 Heat storage and transport	9
1.4.2 Hydrological cycle	10
1.4.3 Carbon dioxide exchange with the oceans	11
1.4.4 Dynamical coupling between the atmosphere and the ocean	12
1.5 Radiative transfer in the atmosphere	12
1.6 The greenhouse effect	14
1.7 The ozone layer and ozone depletion	17
1.8 Climate observations	19
1.9 The stability of the climate	21
1.9.1 Data on past fluctuations	21
1.9.2 Origin of the observed fluctuations	22
1.10 Climate modelling	23
1.11 Climate on other planets	26
Further reading	28
Questions	28
2 Solar radiation and the energy budget of the earth	29
2.1 Sun and climate	29
2.2 Solar physics	30
2.3 Source of the Sun's energy	30
2.4 The radiation laws	31
2.5 The solar constant	32
2.6 The solar spectrum	33
2.7 Solar observations	34
2.8 Absorption of solar radiation in the atmosphere	35
2.9 The balance between incoming solar and outgoing thermal radiation	36
Further reading	39
Questions	39

3	Atmosphere and climate	40
3.1	Introduction	40
3.2	Atmospheric composition	41
3.3	Units of pressure	41
3.4	The variation of pressure with height	42
3.5	Vertical temperature structure	43
3.5.1	Tropospheric temperature profile	44
3.5.2	Stratospheric temperature profile	46
3.5.3	Observed temperature profiles	47
3.6	The general circulation of the atmosphere	49
	Further reading	51
	Questions	51
4	Clouds and aerosols	52
4.1	Introduction	52
4.2	Potential temperature and entropy	52
4.3	Potential energy and available potential energy	55
4.4	Humidity	56
4.5	Thermodynamics of moist air	58
4.6	Condensation processes and cloud formation	60
4.7	Growth of cloud droplets	62
4.8	Growth of ice crystals	64
4.9	Collision and coalescence	65
4.10	Aerosols	65
	Further reading	67
	Questions	67
5	Ocean and climate	68
5.1	Introduction	68
5.2	Ocean measurements	69
5.3	Composition of the ocean: Salinity	72
5.4	Vertical and latitudinal structure of the ocean	73
5.5	The oceanic equation of state	75
5.6	The general circulation of the ocean	76
5.6.1	The Coriolis Force	77
5.6.2	Deep ocean dynamics: the thermohaline circulation	78
5.6.3	Near surface dynamics: Ekman transport and Sverdrup balance	81
5.7	Ocean circulation and climate change	85
	Further reading	85
	Questions	86
6	Radiative transfer	87
6.1	Introduction	87
6.2	Black body or cavity radiation	88

6.3	Atmospheric absorption and emission	89
6.4	Atmospheric radiative transfer	90
6.5	The radiative transfer equation	91
6.6	Integration over wavelength	93
6.7	Spectral properties of atmospheric gases	93
6.7.1	Spectral lines	94
6.7.2	Vibration-rotation bands	94
6.7.3	Band absorption formulations and band models	95
6.8	Radiative equilibrium models for the temperature profile	97
6.9	Temperature sounding and weighting functions	99
6.10	The inverse problem	101
	Further reading	103
	Questions	103
7	Earth's energy budget: The 'Greenhouse' effect	104
7.1	Introduction	104
7.2	Is the atmosphere a 'Greenhouse'?	104
7.3	The 'Greenhouse' gases	105
7.4	Energy balance calculations	108
7.5	A simple physical greenhouse model	109
7.6	A better greenhouse model	110
7.6.1	The radiative-dynamical equilibrium profile revisited	110
7.6.2	Surface temperature versus absorber amount	112
7.6.3	Effect of changing albedo on surface temperature	114
7.7	A simple model with feedback	116
7.8	Conclusions	117
	Further reading	118
	Questions	118
8	The ozone layer	119
8.1	Introduction	119
8.2	Ultraviolet radiation in the atmosphere	120
8.3	Photochemistry of ozone production	121
8.4	Variation of ozone concentration with altitude	123
8.5	Catalytic cycles	123
8.6	Ozone measurements	125
8.7	The Antarctic ozone hole	126
8.8	The global distribution of ozone	127
	Further reading	128
	Questions	129
9	Climate observations by remote sensing	130
9.1	Introduction	130
9.2	Ground-based measurements	130

98	9.3	Satellite measurements	132
99	9.4	Infrared instruments for remote sounding	134
91	9.4.1	Calibration	134
93	9.4.2	Modulation	135
93	9.4.3	Radiometer optics	136
94	9.4.4	Interference filters	136
94	9.4.5	Thermal infrared detectors	138
95	9.4.6	Photon detectors	138
97	9.4.7	Electronics and telemetry	139
99	9.5	Radiometric performance	139
101	9.5.1	Signal	139
102	9.5.2	Noise	140
103	9.5.3	Signal to noise ratio	141
	9.6	Limb viewing instruments	142
	9.7	Contemporary satellites and instruments: Three examples	143
104	9.7.1	Weather satellites: The Geostationary Operational Environmental Satellite	143
104	9.7.2	Environmental satellites: ENVISAT	145
105	9.7.3	Research satellites: UARS and EOS	145
108	9.8	Applications of remote sensing to climate studies	148
109	9.8.1	Earth's radiation budget	148
110	9.8.2	Atmospheric temperature sounding	150
112	9.8.3	Atmospheric composition and chemistry	151
112	9.8.4	Clouds, aerosols, and polar stratospheric clouds	153
114	9.8.5	Doppler wind measurements	153
114	9.8.6	Surface properties	154
117	9.8.7	Detection of climate change	156
118	9.9	The future	157
118		Further reading	157
118		Questions	158
119	10	Climate sensitivity and change	160
120	10.1	Introduction	160
121	10.2	Astronomical changes	161
123	10.2.1	The Milankovich cycles	161
123	10.2.2	The ice ages	163
125	10.2.3	Current changes	165
126	10.3	Variations in solar output	165
127	10.4	Changes in atmospheric composition	167
128	10.4.1	Greenhouse gases	167
129	10.4.2	Aerosols	168
	10.4.3	Cloud and albedo variations	169
130	10.5	Ocean circulation variations	170
130	10.5.1	Changes in the thermohaline circulation	170
130	10.5.2	Rapid climate change	170
131	10.5.3	Ocean–atmosphere coupling: The El Niño–Southern Oscillation (ENSO)	172

10.6 Natural temperature fluctuations	173
10.7 Summary	175
Further reading	176
Questions	176

11 Climate models and predictions 177

11.1 Introduction	177
11.2 Current models and predictions	179
11.3 Multiple climate equilibria and sudden climate change	182
11.3.1 A simple radiative model	183
11.3.2 Box models of the ocean	184
11.3.3 Complex models	187
11.4 Problems of detection, attribution, and prediction	189
Further reading	192
Questions	193

12 Climate on other planets 194

12.1 Introduction	194
12.2 Mercury	195
12.3 Venus	196
12.4 Mars	199
12.5 Titan	201
12.6 The Jovian planets	202
12.7 Planets of other stars	204
12.8 Planets without stars	205
Further reading	205
Questions	205

13 Epilogue 207

Index 211
