choosed quot, even say that they want to quit. They say the costs of their exchanges. In they don't quits or if they do quit, they have relapse. People with OCD similarly often know they shouldn't not as they dos even say they don't want to one this way, yet they continue to do it. What's different fram addiction is that as we have, there is a widely accepted explanation of subtions, with OCD act as they dos antienty. The role anxiety plays in OCD is complicated and sometimes subtle, but society is what addinately uniferexplanations of OCD. A person with hand-washing OCD doesn't just went here hands to be clean, she is anxiety that they re not clean or about what might happen if they're not clean.

The question for us, then, was whether more! OCD-- or Scrupelosity-could be understood in this way. If ou Scrupelosity seems very different
