

Content

1	Introduction	5
2	Water management and required limits	8
3	Quality of hydrosphere	13
3.1	Method	13
3.2	Surface water	13
3.2.1	Hydrochemical indicators	13
3.2.2	Radioactive substances	19
3.3	Water biocoenoses	24
3.3.1	Hydrobiological indicators	24
3.3.2	Fish species and water macrophytes	26
3.4	Bottom sediments	27
3.5	Groundwater	34
3.6	Precipitation water	36
4	Contamination of soil	38
5	Prediction of impacts of Temelín NPP	41
5.1	Surface water	41
5.1.1	Standard operation	41
5.1.2	Accidental pollution	50
5.1.2.1	Transport time under conditions of stratification	52
5.1.2.2	Transport time under isothermal conditions	53
5.1.2.3	Reduction of transport time under conditions of the occurrence of a dense stream	54
5.1.2.4	Dilution ratios and transport of pollution	55
5.1.2.5	Impacts of an accidental release into the atmosphere	57

5.2	Groundwater	59
5.2.1	Accidental pollution	59
5.2.1.1	Geology	59
5.2.1.2	Tectonism	60
5.2.1.3	Hydrogeology	60
5.2.1.4	Groundwater regime	62
5.2.1.5	Migration of radionuclides	63
6	Other characteristics of the environment	68
6.1	Climatic conditions	68
6.2	Radioactive substances in sludge from WWTPs	71
7	Conclusion	73
8	References	75
9	Summary	78
10	Zusammenfassung	84
