	PREFACE	5
1.	INTRODUCTION	13
1.1	The atmosphere	13
1.2	Atmospheric pollution	16
1.3	Atmospheric protection	20
	References	26
2.	ATMOSPHERIC POLLUTANTS	28
2.1	Types of pollutants	28
2.2	Pollutants and immission criteria	31
2.3	Substances acting as pollutants on a global scale	36
2.4	Criteria for amounts of emissions from the sources	39
2.4.1	Mass emission flux	41
2.4.2	Mass emission concentration	41
2.4.3	Specific emission production (emission factor)	42
2.4.4	Specific regional emission	43
2.4.5	Sensory criteria	43
2.5	Emission relationships and their interdependence	44
2.6	Properties of solid pollutants	48
	References	52
3.	THE ADVERSE EFFECTS OF INDUSTRIAL EMISSIONS	54
3.1	The adverse effects of industrial emissions on human health	54
3.2	The effect of industrial emissions on forests and forestry	58
3.3	The effect of industrial emissions on the soil and agricultural products	60
3.4	The harmful effects of industrial emissions on domestic and other animals	63
3.5	The effects of industrial emissions on materials, structures, and equipment	64
	References	67

4.	PHYSICAL AND CHEMICAL CHANGES IN POLLUTANTS IN THE ATMOSPHERE	68
4.1	Dispersion of emissions from pollution sources	68
4.2	Chemical changes of pollutants in the atmosphere	72
4.3	Long-range transport of air pollution	78
4.4	Acid rain	80
	References	82
5.	SOURCES OF ATMOSPHERIC POLLUTION	84
5.1	Natural pollution and pollution arising from human activity	84
5.2	The concept "source of air pollution"	84
5.2.1	The source as the emission site	85
5.2.2	The source as a technological whole	85
5.2.3	The source as a unit of area	90
5.3	Global estimates of emissions from the principal types of sources	90
5.4	Mobile sources of atmospheric pollution	96
5.5	Sources of individual types of pollutants	98
5.6	Principal types of industrial emission sources	100
5.7	Limitation of emissions	102
	References	107
6.	TECHNICAL PRINCIPLES AND EQUIPMENT LIMITING THE EMISSION OF SOLID AND LIQUID POLLUTANTS	108
6.1	Physical principles, forces, and phenomena employed in pollutant removal	108
6.1.1	Mechanical principles—utilization of the force of gravity	109
6.1.2	Mechanical principles—utilization of the inertia of solid particles	109
6.1.3	Mechanical principles—direct capture of particles	110
6.1.4	Mechanical principles—diffusion phenomena for solid particles in a gas stream	110
6.1.5	Electrostatic principles—utilization of an electric field	112
6.1.6	The effect of coagulation of solid particles	113
6.1.7	Utilization of secondary particles for separation	115
6.1.8	Further phenomena utilized in separation processes	115
6.1.9	Utilization of physical principles and forces in separators	116
6.2	Properties of separators	116
6.2.1	Criteria characterizing the separation efficiency of the separator	117
6.2.2	Pressure loss in the separator	123
6.3	Industrial separators	125
6.3.1	Dry mechanical separators	127
6.3.2	Wet mechanical scrubbers	140

6.3.3	Electric precipitators	146
6.3.4	Bag filters	152
	References	157
7.	PRINCIPAL PROCESSES AND EQUIPMENT FOR THE SUPPRESSION OF THE EMISSION OF GASEOUS POLLUTANTS	158
7.1	Absorption	158
7.1.1	The basic process	158
7.1.2	Absorption equipment	159
7.2	Adsorption	165
7.2.1	The basic process	165
7.2.2	Adsorption equipment	166
7.3	Condensation	168
7.4	Oxidation and reduction	169
7.4.1	Thermal oxidation	170
7.4.2	Catalytic oxidation	171
	References	173
8.	FORMATION OF SOLID AND LIQUID POLLUTANTS AND TECHNIQUES FOR LIMITING THEIR EMISSION	174
8.1	General formation of solid pollutants	174
8.2	General formation of liquid pollutants	178
8.3	Production of heat and steam and production of electrical energy	179
8.4	Ferrous and nonferrous metallurgy	182
8.4.1	Blast furnaces	182
8.4.2	Agglomeration	185
8.4.3	Oxygen converters	186
8.4.4	Steel furnaces	186
8.4.5	Foundries and cupolas	187
8.4.6	Production of ferroalloys	189
8.4.7	Production of aluminium	190
8.4.8	Other nonferrous metallurgy	190
8.5	Production of construction materials	192
8.5.1	Production of mortar materials	192
8.5.2	Asphalt plants	199
8.5.3	The stone industry	200
8.6	Other types of industrial processes	201
8.6.1	Coke plants	201
8.6.2	Production of calcium carbide	202
8.6.3	Soot production	202
	References	202

9.	THE FORMATION OF INDUSTRIAL GASEOUS POLLUTANTS	204
9.1	General formation of gaseous pollutants	204
9.2	Production of steam, heat and electric power	205
9.2.1	Formation of sulphur oxides emissions	205
9.2.2	Formation of nitrogen oxides emissions	207
9.2.3	Formation of emissions of arsenic and fluorine compounds	208
9.2.4	Formation of gaseous emissions in refuse incinerators	209
9.3	Ferrous and nonferrous metallurgy	210
9.3.1	Formation of gaseous emissions from iron ore agglomeration	210
9.3.2	Formation of gaseous emissions from blast furnaces	211
9.3.3	Formation of gaseous emissions in foundries	211
9.3.4	Formation of gaseous emissions from steel plants, rolling mill plants, and pressing plants	212
9.3.5	Emission of gaseous fluorine compounds in electrolytic aluminium production	212
9.3.6	Formation of emissions during lead production	214
9.3.7	Formation of emissions during the production of antimony and copper	214
9.3.8	Gaseous emissions in the coke production	215
9.4	The chemical industry	216
9.4.1	Emissions of sulphur oxides and sulphuric acid from the production of sulphuric acid	217
9.4.2	Formation of emissions of nitrogen oxides	218
9.4.3	The formation of gaseous emissions in the production of chlorine and sodium hydroxide	220
9.4.4	Formation of emissions of chlorine and compounds containing chlorine during chlorination processes	221
9.4.5	Formation of gaseous emissions in the production of hydrogen chloride and hydrochloric acid	222
9.4.6	Formation of hydrogen sulphide and carbon disulphide emissions	222
9.4.7	Formation of emissions of fluorine compounds	223
9.4.8	Formation of gaseous emissions during the production of combined fertilizers	225
9.4.9	Emission of gases during the production of cellulose, formation of emissions of hydrogen sulphide and odorous substances during the production of cellulose by the sulphate procedure	226
9.4.10	Formation of gaseous pollutants in petroleum refining	226
9.5	The production of construction materials	227
9.5.1	Formation of gaseous emissions during combustion processes	228
9.5.2	Formation of emissions of fluorine compounds in brick kilns	228

9.5.3	Formation of emissions of nitrogen oxides during the production of cement, lime, and ceramics	228
9.6	Formation of gaseous emissions in the glass manufacturing industry	229
9.6.1	Formation of hydrogen fluoride emissions during the production and polishing of glass	229
9.6.2	Formation of nitrogen oxide emissions in the glass industry	229
	References	229
10.	SUPPRESSION OF GASEOUS EMISSIONS	231
10.1	Suppression of gaseous emissions from energy production and combustion processes	231
10.1.1	Decreasing the sulphur content in fuels	231
10.1.2	Suppression of emissions of sulphur oxides during combustion processes	233
10.1.3	Removal of sulphur oxides from the flue gases	237
10.1.4	Limitation of emission of nitrogen oxides during combustion processes	254
10.2	Limitation of gaseous emissions in the metallurgical and chemical industries and other branches of industry	255
10.2.1	Limitation of hydrogen sulphide emissions from coking plants and other sources	255
10.2.2	Limitation of emissions of fluorine compounds in the manufacture of aluminium	260
10.2.3	Limiting emissions of sulphur dioxide from nonferrous metallurgy	261
10.2.4	Limiting emissions of sulphur dioxide in the production of sulphuric acid	261
10.2.5	Limiting emission of sulphuric acid from the production of sulphuric acid	263
10.2.6	Limiting emissions of nitrogen oxides from the production of nitric acid	264
10.2.7	Limitation of the emission of carbon disulphide and hydrogen sulphide during the reduction of viscose fibres	269
10.2.8	Limitation of chlorine and hydrogen chloride emissions	271
10.2.9	Limitation of emissions of hydrogen fluoride and fluorine compounds	271
10.2.10	Limitation of emissions of hydrogen sulphide and other odorous substances in the production of cellulose by the sulphate procedure	272
10.2.11	Limitation of emissions of organic and odorous substances	273
	References	273

11.	EVALUATION OF AIR POLLUTION	275
11.1	Approaches to the evaluation of air pollution	275
11.2	Study of emissions	276
11.3	Study of immisions	277
11.4	Instrumental techniques	278
	References	278
12.	THE ECONOMICS OF ATMOSPHERIC PROTECTION	279
12.1	The concept of economy in atmospheric protection	279
12.2	Partial economic considerations	280
12.3	Economic considerations in the formation and limitation of the amounts of emissions within technological processes	281
12.4	Economic considerations in removal of pollutants	282
12.5	Damage resulting from atmospheric pollution	284
12.6	The cost of atmospheric protection	286
12.7	Comparison of the damage caused by atmospheric pollution and the cost of atmospheric protection	287
	References	287
	SUBJECT INDEX	289
