

# Contents

Preface

## 1 Introduction to supramolecular chemistry

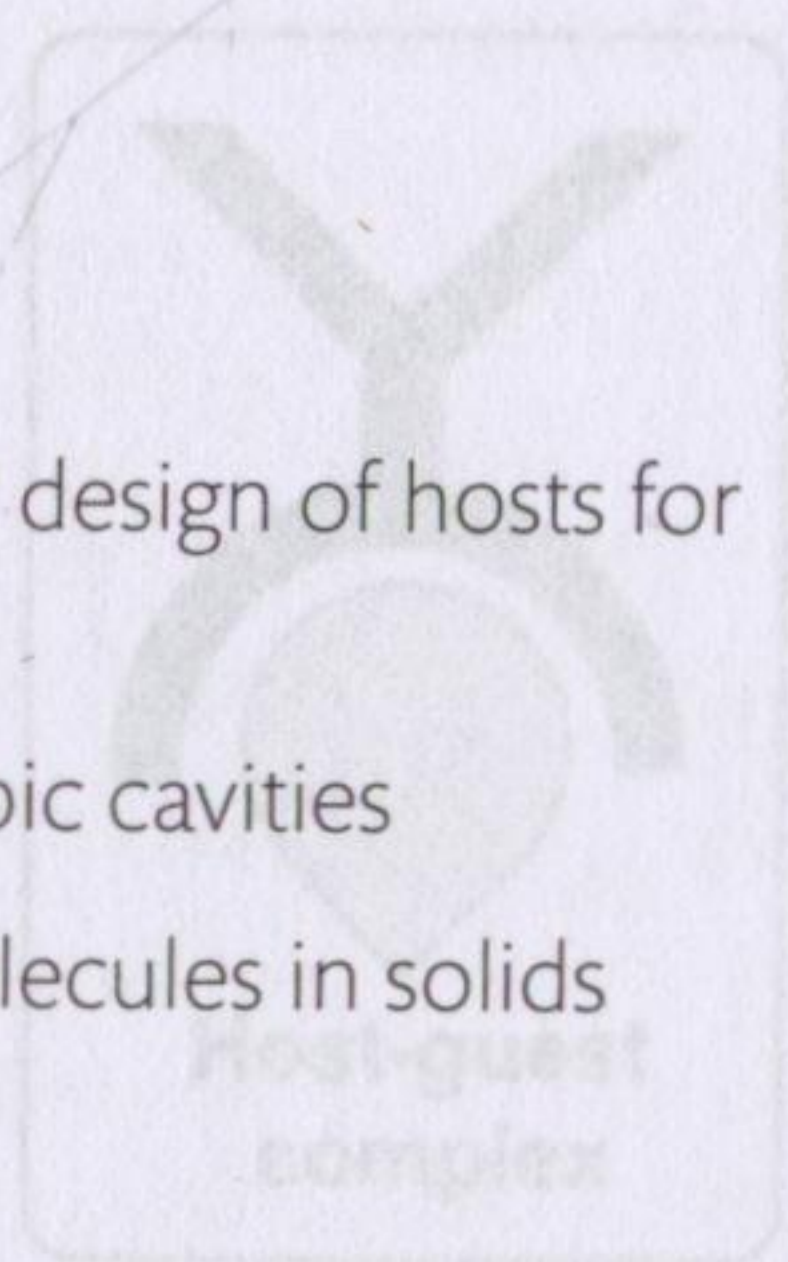

- 1.1 Introduction 1
- 1.2 Supramolecular chemistry and molecular recognition in nature 2
- 1.3 Design principles 4
- 1.4 Solvent effects 10
- 1.5 How are supramolecular interactions and complexes studied? 12
- 1.6 The modern importance of supramolecular chemistry 19
- 1.7 Further reading 20
- 1.8 Summary 20
- 1.9 Exercises 21

## 2 Binding of charged guests

- 2.1 Introduction 23
- 2.2 Why bind cations and anions? 23
- 2.3 Design principles for cation and anion receptors 24
- 2.4 Cation binding receptors 28
- 2.5 Anion binding receptors 35
- 2.6 Simultaneous cation and anion binding (ion pair recognition) 46
- 2.7 Applications of cation and anion binding 50
- 2.8 Summary 58
- 2.9 Further reading 59
- 2.10 Exercises 60

## 3 Binding of neutral guests

- 3.1 Introduction 63
- 3.2 Host-guest recognition: rational design of hosts for neutral guest binding 63
- 3.3 Guest binding within hydrophobic cavities 69
- 3.4 Recognition of neutral guest molecules in solids 77
- 3.5 Summary 79
- 3.6 Further reading 80
- 3.7 Exercises 80

<b>4 Self-assembly</b>	83
4.1 Introduction	83
4.2 Metal cation self-assembly	85
4.3 Neutral self-assembly	100
4.4 Anion self-assembly	113
4.5 Further applications of self-assembly	117
4.6 Summary and conclusions	121
4.7 Further reading	121
4.8 Exercises	122
<b>5 Mechanically interlocked molecules</b>	124
5.1 Introduction	124
5.2 Synthesis of mechanically interlocked molecules	125
5.3 Properties and applications of mechanically interlocked molecules	146
5.4 Molecular machines	158
5.5 Summary and conclusions	175
5.6 Further reading	177
5.7 Exercises	177
Glossary	179
Index	181
