CONTENTS

Section One Introduction

1. Basic concepts and components of the immune system 3
2. Basic concepts 9

Section Two Antigen-recognition molecules

3. Introduction to antigen recognition 19
4. Antigens and antibody structure 23
5. Antibody–antigen interaction 31
6. Antibody diversity 39
7. The T cell receptor 49
8. Major histocompatibility complex 57
9. Review of antigen recognition 65

Section Three Physiology

10. Antigen processing and presentation 71
11. Lymphocyte activation 79
12. Hematopoiesis 89
13. The organs and tissues of the immune system 95
14. B cell development 109
15. T cell development 121
16. Cell–cell interaction in generating effector lymphocytes 133
17. Immunological memory 143
18. Review of immune physiology 151

Section Four Innate immunity

19. Constitutive defenses including complement 157
20. Phagocytes 167
21. Killing in the immune system 179
22. Inflammation 191
23. Review of innate immunity 201

Section Five Immune system in health and disease

24. Infections and vaccines 207
25. Hypersensitivity reactions 215
26. Immediate hypersensitivity (type I): allergy 221
27. Autoimmunity 233
28. Antibody-mediated hypersensitivity (type II) 245
29. Immune complex disease (type III hypersensitivity) 253
30. Delayed hypersensitivity (type IV) 261
31. Primary immunodeficiency 269
32. Secondary immunodeficiency 277
33. Transplantation 285
34. Tumor immunology 295
35. Integration of the immune system with other regulatory systems 305
36. Review of immunity in health and disease 311

Index 315
