<i>Dedication</i>	vii
<i>Preface to the Second Edition</i>	ix
<i>Preface to the First Edition</i>	xi
<i>About the Author</i>	xiii
1. Introduction	1
1.1 Some Historical Notes	4
1.2 Overview of Protein Structural Elements and Basic Definitions	13
1.2.1 The amino acids	14
1.2.2 The polypeptide chain	19
1.3 Non-Covalent Interactions and Structure-Function Relationships in Proteins	22
1.3.1 Some comments on Anfinsen's dogma	23
1.3.2 Experimental measurements of non-covalent interactions in proteins	24
References	25
2. Van der Waals Interactions	27
2.1 Observation of van der Waals Interactions	28
2.2 Nature of van der Waals Interactions	30
2.2.1 Dispersion forces	31
2.2.2 Dipole-dipole interactions	44
2.2.3 Dipole-induced dipole interactions	49
2.2.4 Repulsive interactions	51
2.3 Potential Functions for Application in Proteins	54
2.4 Approximation for Polyatomic Systems	57
References	59
3. Hydrogen Bonds	60
3.1 Nature of Hydrogen Bonds	60
3.1.1 Proton donors, electronegativity	61
3.1.2 Proton acceptors	64

3.2	Geometry and Strength of Hydrogen Bond	65
3.2.1	Directionality	66
3.2.2	Hydrogen bond length	73
3.2.3	Hydrogen bond strength	77
3.2.4	Hydrogen bond potential functions	81
3.3	Hydrogen Bonds in Proteins	83
3.3.1	Secondary structure elements	83
3.3.2	Hydrogen bonds involving side chains	86
3.3.3	Salt bridges	88
3.3.4	Hydrogen bond networks	90
3.4	Hydrogen Bonds and Protein Stability	94
3.4.1	Hydrogen bonds within the polypeptide chain, role in folding	95
3.4.2	Hydrogen bonds involving side chain, role in stability	97
	References	100
4.	Hydrophobic Interactions	102
4.1	Nature of Hydrophobic Interactions	102
4.2	Water	103
4.2.1	Flickering clusters model of water	104
4.2.2	Hydrocarbons in water, iceberg model	107
4.3	Hydrophobic Effect	109
4.3.1	Oil drop in water	109
4.3.2	Experimental assessment of hydrophobic interaction	110
4.4	Hydrophobic Interactions in Proteins	114
4.4.1	Additivity of hydrophobic interactions	115
4.4.2	Solvent accessibility	117
4.4.3	Evaluation of hydrophobic interactions	123
4.4.4	Size of the hydrophobic core	128
4.4.5	Hydrophobic packing and packing defects	133
	References	139
5.	Electrostatic Interactions	141
5.1	Debye-Hückel Theory	142
5.1.1	Poisson-Boltzmann equation	142
5.1.2	Parameter of Debye	147
5.1.3	The electrostatic potential of an ion in solution	150
5.1.4	Extension for proteins	152
5.2	Ion-solvent Interactions	152
5.2.1	Born model	153
5.2.2	Application of the Born model for proteins: Why do charges tend to be on the protein surface?	157
5.2.3	Generalised Born theory for proteins	159

5.3	Calculation of Electrostatic Interactions in Proteins	165
5.3.1	The protein molecule as a dielectric material	165
5.3.2	Dielectric model for calculation of electrostatic interactions in proteins	171
5.3.3	Numerical solution of the Poisson-Boltzmann equation, finite difference method	174
5.3.4	Boundary conditions	183
5.3.5	Electrostatic potential calculated by means of the finite difference method	186
	References	190
6.	Ionisation Equilibria in Protein	192
6.1	Why Does One Need to Know Ionisation Equilibria?	194
6.2	Basic Definitions	196
6.2.1	Protonation/deprotonation equilibria	196
6.2.2	Henderson-Hasselbalch equation	197
6.2.3	Degree of deprotonation and degree of protonation	199
6.2.4	Ionisation equilibrium constants of model compounds	202
6.3	Factors Determining Ionisation Equilibria in Proteins	205
6.3.1	Desolvation	207
6.3.1.1	Born energy	207
6.3.1.2	Calculation of the Born energy	210
6.3.2	Interactions with the protein permanent charges	213
6.3.3	Definition of intrinsic pK	214
6.3.4	Charge-charge interactions	215
6.4	Combinatorial Problem	217
6.4.1	Solution based on the Boltzmann weighted sum	219
6.4.2	Solution based on the Monte Carlo simulation	223
6.5	Cooperative Ionisation	226
	References	232
7.	Conformational Flexibility	233
7.1	Location Variation of Polar Hydrogen Atoms	233
7.1.1	Titratable and pH-sensitive sites	234
7.1.2	Microscopic pK	235
7.1.3	Population of the microscopic states	240
7.2	Examples for pH-Dependent Hydrogen Bonding	246
7.2.1	Ionisation properties of Asp76 in ribonuclease T ₁	246
7.2.2	Hydrogen bond rearrangement related to protein function	251
7.3	Conformational Flexibility Involving Non-Hydrogen Atoms	257
7.3.1	Conformations generated by means of molecular dynamics simulation	258
7.3.2	Average pK values	267

7.3.3	Desolvation and charge-dipole energy compensation	275
7.3.4	Dynamics of salt bridges	280
	References	283
8.	Protein States	284
8.1	Folded and Unfolded States	284
8.2	Misfolded Proteins	287
8.3	Metamorphic Proteins	291
8.4	Intrinsically Disordered Proteins	296
	References	305
9.	Modelling of Electrostatic Interactions in Unfolded Proteins	307
9.1	Spherical Model of Unfolded Proteins	307
9.2	Size of the Dielectric Sphere	309
9.2.1	Radius of gyration vs hydrodynamic radius	309
9.2.2	Modelling of electrostatic interactions	311
9.3	Average Distance Between Charges	320
9.4	Ionisation Equilibria in Unfolded Proteins	322
	References	326
10.	Protein Stability	328
10.1	Definitions	328
10.2	Kinetic Stability	329
10.3	pH Dependence of Protein Stability	335
10.4	Temperature Dependence of Protein Stability	342
10.4.1	Differential scanning microcalorimetry	343
10.4.2	Thermodynamic analysis	346
10.4.3	Cold denaturation	351
10.5	Thermal Stability of Proteins	352
	References	358
Appendix A	Basic Concepts in Thermodynamics and Statistical Physics	359
A.1	Subject and Main Definitions of Thermodynamics	359
A.1.1	Macroscopic system	360
A.1.2	Equilibrium, thermodynamic state of a system	360
A.1.3	Process	361
A.1.4	Function of state	361
A.1.5	Intensive and extensive parameters	363
A.1.6	First law of thermodynamics, energy	363
A.1.7	Heat and work	364
A.1.8	Internal energy	365
A.1.9	Enthalpy	367

A.1.10	Second law of thermodynamics, entropy	368
A.1.11	Connection between the first and second laws of thermodynamics	375
A.1.12	Free energy	375
A.1.13	Processes at constant pressure and temperature	377
A.1.14	Heat capacity	377
A.1.15	Direction of processes	380
A.1.16	Temperature	381
A.2	Subject and Main Definitions of Statistical Thermodynamics	382
A.2.1	Postulates of statistical thermodynamics	383
A.2.2	Ensemble average	385
A.2.3	Partition function	392
Appendix B	Electric Dipoles	396
B.1	Definition	396
B.2	Electrostatic Field of a Dipole	402
Appendix C	Nabla-operator, Solutions of the Poisson-Boltzmann Equations	405
C.1	Laplace Operator	405
C.2	Spherical Symmetrical Form of the Laplace and Poisson-Boltzmann Equations	406
C.3	Solution of Laplace and Poisson-Boltzmann Equation in the Debye-Hückel Theory	410
C.3.1	Boundary conditions	410
C.3.2	Solution	412
C.4	Gauss Theorem	415
