CONTENTS

Preface 5

Basic symbols 9

1 Preliminaries 11
- 1.1 Estimators of basic parameters (regular case) . . . 13
- 1.2 Testing hypothesis . . . 27

2 Basic statistical problems in geodetic networks 31
- 2.1 Problem of two points in a network . . . 33
- 2.2 Group of points . . . 42
- 2.3 Transformation of points into a network . . . 43
- 2.4 MINQUE . . . 48
- 2.5 Free geodetic networks . . . 53
  - 2.5.1 Universal model without constraints . . . 53
  - 2.5.2 Universal model with the type I constraints . . . 55
  - 2.5.3 Universal model with the type II constraints . . . 57
- 2.6 Optimum design of measurement . . . 61
- 2.7 Theory of sensitivity . . . 77
- 2.8 Threshold ellipses . . . 92
- 2.9 Accuracy of entries of the design matrix and the covariance matrix . . . 94

3 Special structures of geodetic networks 99
- 3.1 Multistage network . . . 99
- 3.2 Multiepoch network . . . 111
- 3.3 Connecting networks . . . 118
- 3.4 Additional measurement . . . 127

4 Miscellaneous problems 169
- 4.1 H-optimum estimator . . . 169
- 4.2 Group of accurate points in the second stage . . . 183
- 4.3 Helmert transformation: errors in both coordinate systems . . . 187
- 4.4 Optimum elimination of parameters . . . 196

5 Weakly nonlinear models **209**
5.1 Models without constraints on parameters 212
5.2 Model with the type I constraints 226
5.3 Models with the type II constraints 248
5.4 Nonlinear problems of equivalent adjustment algorithms 267

Bibliography **279**

Index **283**
