Hydropower trends

11 Adapting to future flows
Research into future hydro production across the Amazon urges energy planners to focus on climate resilience.

Australasia

12 Activities in Australasia
IWP&DC reflects on recent developments across Australia and New Zealand

Sustainability

16 A sustained effort
Ageing infrastructure and climate-related impacts are further encouraging an industry-wide focus on sustainability

20 Development challenges and the large dams debate

For nearly three decades, Achim Steiner has worked tirelessly as a global leader on sustainable development, climate resilience and international cooperation. During a recent FutureDAMS webinar with David Hulme, Executive Director

of the Global Development Institute, Steiner discussed the sustainable development of water and energy resources. He reflected on his experience as United Nations Development Programme Administrator and Vice-Chair of the UN Sustainable Development Group, as well as his former role as Secretary General of the World Commission on Dams.

Projects

24 Real-time monitoring
Ground Control and Inmarsat enable real-time monitoring for RWE'S hydroelectric power generating facilities in Wales

Lessons learned

26 Gaining greater insight
Industry-wide reports and conferences highlight the need to learn from climate change, dam failure and diversity.
