|--|-----|
| Preface | ix |
| Chapter 1: Mathematical Modeling in Biology | 1 |
| 1.1 Introduction | 1 |
| 1.2 HIV | 2 |
| 1.3 Models of HIV/AIDS | 5 |
| 1.4 Concluding Message | 14 |
| Chapter 2: How to Construct a Model | 17 |
| 2.1 Introduction | 17 |
| 2.2 Formulate the Question | 19 |
| 2.3 Determine the Basic Ingredients | 19 |
| 2.4 Qualitatively Describe the Biological System | 26 |
| 2.5 Quantitatively Describe the Biological System | 33 |
| 2.6 Analyze the Equations | 39 |
| 2.7 Checks and Balances | 47 |
| 2.8 Relate the Results Back to the Question | 50 |
| 2.9 Concluding Message | 51 |
| Chapter 3: Deriving Classic Models in Ecology and Evolutionary Biology | 54 |
| 3.1 Introduction | 54 |
| 3.2 Exponential and Logistic Models of Population Growth | 54 |
| 3.3 Haploid and Diploid Models of Natural Selection | 62 |
| 3.4 Models of Interactions among Species | 72 |
| 3.5 Epidemiological Models of Disease Spread | 77 |
| 3.6 Working Backward—Interpreting Equations in Terms of the Biology | 79 |
| 3.7 Concluding Message | 82 |
| Chapter 4: Functions and Approximations | 89 |
| 4.1 Functions and Their Forms | 89 |
| 4.2 Linear Approximations | 96 |
| 4.3 The Taylor Series | 100 |
| Chapter 5: Numerical and Graphical Techniques—Developing a Feeling for Your Model | 110 |
| 5.1 Introduction | 110 |
| 5.2 Plots of Variables Over Time | 111 |
| 5.3 Plots of Variables as a Function of the Variables Themselves | 124 |

| | |
|---|-----|
| 4.4 Multiple Variables and Phase-Plane Diagrams | 133 |
| 4.5 Concluding Message | 145 |
| Chapter 5: Equilibria and Stability Analyses— | |
| One-Variable Models | 151 |
| 5.1 Introduction | 151 |
| 5.2 Finding an Equilibrium | 152 |
| 5.3 Determining Stability | 163 |
| 5.4 Approximations | 176 |
| 5.5 Concluding Message | 184 |
| Chapter 6: General Solutions and Transformations— | |
| One-Variable Models | 191 |
| 6.1 Introduction | 191 |
| 6.2 Transformations | 192 |
| 6.3 Linear Models in Discrete Time | 193 |
| 6.4 Nonlinear Models in Discrete Time | 195 |
| 6.5 Linear Models in Continuous Time | 198 |
| 6.6 Nonlinear Models in Continuous Time | 202 |
| 6.7 Concluding Message | 207 |
| Primer 2: Linear Algebra | 214 |
| P2.1 An Introduction to Vectors and Matrices | 214 |
| P2.2 Vector and Matrix Addition | 219 |
| P2.3 Multiplication by a Scalar | 222 |
| P2.4 Multiplication of Vectors and Matrices | 224 |
| P2.5 The Trace and Determinant of a Square Matrix | 228 |
| P2.6 The Inverse | 233 |
| P2.7 Solving Systems of Equations | 235 |
| P2.8 The Eigenvalues of a Matrix | 237 |
| P2.9 The Eigenvectors of a Matrix | 243 |
| Chapter 7: Equilibria and Stability Analyses—Linear | |
| Models with Multiple Variables | 254 |
| 7.1 Introduction | 254 |
| 7.2 Models with More than One Dynamic Variable | 255 |
| 7.3 Linear Multivariable Models | 260 |
| 7.4 Equilibria and Stability for Linear Discrete-Time Models | 279 |
| 7.5 Concluding Message | 289 |
| Chapter 8: Equilibria and Stability Analyses— | |
| Nonlinear Models with Multiple Variables | 294 |
| 8.1 Introduction | 294 |
| 8.2 Nonlinear Multiple-Variable Models | 294 |
| 8.3 Equilibria and Stability for Nonlinear Discrete-Time Models | 316 |
| 8.4 Perturbation Techniques for Approximating Eigenvalues | 330 |
| 8.5 Concluding Message | 337 |

| | |
|---|-----|
| Chapter 9: General Solutions and Transformations— | |
| Models with Multiple Variables | 347 |
| 9.1 Introduction | 347 |
| 9.2 Linear Models Involving Multiple Variables | 347 |
| 9.3 Nonlinear Models Involving Multiple Variables | 365 |
| 9.4 Concluding Message | 381 |
| Chapter 10: Dynamics of Class-Structured Populations | 386 |
| 10.1 Introduction | 386 |
| 10.2 Constructing Class-Structured Models | 388 |
| 10.3 Analyzing Class-Structured Models | 393 |
| 10.4 Reproductive Value and Left Eigenvectors | 398 |
| 10.5 The Effect of Parameters on the Long-Term Growth Rate | 400 |
| 10.6 Age-Structured Models—The Leslie Matrix | 403 |
| 10.7 Concluding Message | 418 |
| Chapter 11: Techniques for Analyzing Models | |
| with Periodic Behavior | 423 |
| 11.1 Introduction | 423 |
| 11.2 What Are Periodic Dynamics? | 423 |
| 11.3 Composite Mappings | 425 |
| 11.4 Hopf Bifurcations | 428 |
| 11.5 Constants of Motion | 436 |
| 11.6 Concluding Message | 449 |
| Chapter 12: Evolutionary Invasion Analysis | 454 |
| 12.1 Introduction | 454 |
| 12.2 Two Introductory Examples | 455 |
| 12.3 The General Technique of Evolutionary Invasion Analysis | 465 |
| 12.4 Determining How the ESS Changes as a Function of Parameters | 478 |
| 12.5 Evolutionary Invasion Analyses in Class-Structured Populations | 485 |
| 12.6 Concluding Message | 502 |
| Chapter 13: Probability Theory | 513 |
| 13.1 An Introduction to Probability | 513 |
| 13.2 Conditional Probabilities and Bayes' Theorem | 518 |
| 13.3 Discrete Probability Distributions | 521 |
| 13.4 Continuous Probability Distributions | 536 |
| 13.5 The (Insert Your Name Here) Distribution | 553 |
| Chapter 14: Probabilistic Models | 567 |
| 14.1 Introduction | 567 |
| 14.2 Models of Population Growth | 568 |
| 14.3 Birth-Death Models | 573 |
| 14.4 Wright-Fisher Model of Allele Frequency Change | 576 |
| 14.5 Moran Model of Allele Frequency Change | 581 |
| 14.6 Cancer Development | 584 |

| | |
|---|-----|
| 13.7 Cellular Automata—A Model of Extinction and Recolonization | 591 |
| 13.8 Looking Backward in Time—Coalescent Theory | 594 |
| 13.9 Concluding Message | 602 |
| Chapter 14: Analyzing Discrete Stochastic Models | 608 |
| 14.1 Introduction | 608 |
| 14.2 Two-State Markov Models | 608 |
| 14.3 Multistate Markov Models | 614 |
| 14.4 Birth-Death Models | 631 |
| 14.5 Branching Processes | 639 |
| 14.6 Concluding Message | 644 |
| Chapter 15: Analyzing Continuous Stochastic Models— | |
| Diffusion in Time and Space | 649 |
| 15.1 Introduction | 649 |
| 15.2 Constructing Diffusion Models | 649 |
| 15.3 Analyzing the Diffusion Equation with Drift | 664 |
| 15.4 Modeling Populations in Space Using the Diffusion Equation | 684 |
| 15.5 Concluding Message | 687 |
| Epilogue: The Art of Mathematical Modeling in Biology | 692 |
| Appendix 1: Commonly Used Mathematical Rules | 695 |
| A1.1 Rules for Algebraic Functions | 695 |
| A1.2 Rules for Logarithmic and Exponential Functions | 695 |
| A1.3 Some Important Sums | 696 |
| A1.4 Some Important Products | 696 |
| A1.5 Inequalities | 697 |
| Appendix 2: Some Important Rules from Calculus | 699 |
| A2.1 Concepts | 699 |
| A2.2 Derivatives | 701 |
| A2.3 Integrals | 703 |
| A2.4 Limits | 704 |
| Appendix 3: The Perron-Frobenius Theorem | 709 |
| A3.1: Definitions | 709 |
| A3.2: The Perron-Frobenius Theorem | 710 |
| Appendix 4: Finding Maxima and Minima of Functions | 713 |
| A4.1 Functions with One Variable | 713 |
| A4.2 Functions with Multiple Variables | 714 |
| Appendix 5: Moment-Generating Functions | 717 |
| <i>Index of Definitions, Recipes, and Rules</i> | 725 |
| <i>General Index</i> | 727 |
