	Participant information	271
	Early predictive factors for locomotor outcome in children with CP	271
	A descriptive analysis of functional skills in children with CP	271
	A 13-month-old girl using a transverse palmar radial grip	271
	A 23-month-old girl using a transverse digital radial grip	271
	The spoons used by Steenberg et al.	271
	An 8-year-old girl using an adult grip	271
	A sixteenth-century wooden fist spoon	271
	A conventional (1) and two ergonomic spoons with a thick handle (2) and a thick and bent handle (3)	271
	The stepping reflex	271
	Motor development in light of Edelman's Neuronal Group Selection Theory	271
	Reaction time measures from two switches (elbow and index finger)	271
	Reaction time measured	271
	Typical acceleration profiles for a single rapid aiming movement	271
	Example of one A4-sized paper	271
	Two examples of the drawing traces made by a participant with left spastic hemiparesis (left) and right spastic hemiparesis (right)	271
	The timing of the catch in the deflating ball experiment under monocular and binocular viewing	271
	The telescopic	271
	The timing of the catch for balls of different diameters under monocular and binocular viewing	271
	The timing of the catch for balls of different diameters under monocular and binocular viewing in children from 4 to 11 years of age	271
	Stages of learning	271
	Theoretical model of movement co-ordination	271
	Interception of a stationary ball	271
	Mean throwing velocity for boys and girls by grade	271
