Anatomy and cells of the immune system the immune system

1	Anatomy and cells of the immune system	1
2	Innate immunity I: physical and humoral protection	11
3	Innate immunity II: cellular mechanisms	23
4	Acquired immunity: antigen receptors	35
5	The human leukocyte antigens	55
6	Cellular immune responses I: dendritic cells, macrophages and B lymphocytes	71
7	Cellular immune responses II: T lymphocytes, antigen presentation and natural killer cells	87
8	The immune response to microbes: an overview	115
9	Tolerance and mechanisms of autoimmunity	121
10	Hypersensitivity reactions and clinical allergy	133
11	Transplantation	151
12	Rheumatic diseases	167
13	Endocrine autoimmune disease	189
14	Liver diseases	203
15	Gastrointestinal diseases	211
16	Immune-mediated nephritis and vasculitis	219
17	Immune-mediated skin disease	239
18	Immune-mediated diseases of the nervous system and eye	249
19	Immunodeficiency	265
20	Human immunodeficiency virus and AIDS	283
21	Immunological manifestations of haematological disease	293
22	Immune-based therapies	307
23	Immunisation	323

Appendices

- 1: Commonly encountered CD molecules 334
- 2: Major cytokines, cells releasing them, targets and functions 342
- 3: List of class II human leukocyte antigen alleles 346
- 4: Abbreviations used for amino acids 347
