| | | |
|---------------|--|---------|
| | Discrete dynamic systems | 24 |
| | Classifying dynamic systems | 20 |
| | The initial value problem | 23 |
| | The cobweb model | 23 |
| | Equilibrium and stability of discrete dynamic systems | 29 |
| | Solving first-order difference equations | 25 |
| | Exercises | 27 |
| | Discounting, present value and interest | 20 |
| | Solving second-order difference equations | |
| | The logistic equation: discrete version | 21 |
| | The multiplier-accelerator model | 21 |
| | Linear approximation to discrete nonlinear difference equations | 22 |
| | <i>Preface to the second edition</i> | page xi |
| | <i>Preface to the first edition</i> | xiii |
| PART I | Dynamic modelling | |
| 1 | Introduction | 3 |
| | 1.1 What this book is about | 3 |
| | 1.2 The rise in economic dynamics | 5 |
| | 1.3 Stocks, flows and dimensionality | 8 |
| | 1.4 Nonlinearities, multiple equilibria and local stability | 12 |
| | 1.5 Nonlinearity and chaos | 15 |
| | 1.6 Computer software and economic dynamics | 17 |
| | 1.7 <i>Mathematica</i> and <i>Maple</i> | 20 |
| | 1.8 Structure and features | 24 |
| | Additional reading | 25 |
| 2 | Continuous dynamic systems | 26 |
| | 2.1 Some definitions | 26 |
| | 2.2 Solutions to first-order linear differential equations | 37 |
| | 2.3 Compound interest | 39 |
| | 2.4 First-order equations and isoclines | 41 |
| | 2.5 Separable functions | 45 |
| | 2.6 Diffusion models | 53 |
| | 2.7 Phase portrait of a single variable | 54 |
| | 2.8 Second-order linear homogeneous equations | 59 |
| | 2.9 Second-order linear nonhomogeneous equations | 64 |
| | 2.10 Linear approximations to nonlinear differential equations | 66 |
| | 2.11 Solving differential equations with <i>Mathematica</i> | 70 |
| | 2.12 Solving differential equations with <i>Maple</i> | 73 |
| | Appendix 2.1 Plotting direction fields for a single equation with <i>Mathematica</i> | 77 |
| | Appendix 2.2 Plotting direction fields for a single equation with <i>Maple</i> | 79 |
| | Exercises | 80 |
| | Additional reading | 84 |

| | | |
|----------|--|------------|
| 3 | Discrete dynamic systems | 85 |
| 3.1 | Classifying discrete dynamic systems | 85 |
| 3.2 | The initial value problem | 86 |
| 3.3 | The cobweb model: an introduction | 87 |
| 3.4 | Equilibrium and stability of discrete dynamic systems | 88 |
| 3.5 | Solving first-order difference equations | 99 |
| 3.6 | Compound interest | 105 |
| 3.7 | Discounting, present value and internal rates of return | 108 |
| 3.8 | Solving second-order difference equations | 110 |
| 3.9 | The logistic equation: discrete version | 118 |
| 3.10 | The multiplier–accelerator model | 123 |
| 3.11 | Linear approximation to discrete nonlinear difference equations | 127 |
| 3.12 | Solow growth model in discrete time | 130 |
| 3.13 | Solving recursive equations with <i>Mathematica</i> and <i>Maple</i> | 131 |
| | Appendix 3.1 Two-cycle logistic equation using <i>Mathematica</i> | 135 |
| | Appendix 3.2 Two-cycle logistic equation using <i>Maple</i> | 137 |
| | Exercises | 138 |
| | Additional reading | 141 |
| 4 | Systems of first-order differential equations | 142 |
| 4.1 | Definitions and autonomous systems | 142 |
| 4.2 | The phase plane, fixed points and stability | 145 |
| 4.3 | Vectors of forces in the phase plane | 149 |
| 4.4 | Matrix specification of autonomous systems | 156 |
| 4.5 | Solutions to the homogeneous differential equation system: real distinct roots | 160 |
| 4.6 | Solutions with repeating roots | 162 |
| 4.7 | Solutions with complex roots | 164 |
| 4.8 | Nodes, spirals and saddles | 166 |
| 4.9 | Stability/instability and its matrix specification | 178 |
| 4.10 | Limit cycles | 179 |
| 4.11 | Euler's approximation and differential equations on a spreadsheet | 183 |
| 4.12 | Solving systems of differential equations with <i>Mathematica</i> and <i>Maple</i> | 186 |
| | Appendix 4.1 Parametric plots in the phase plane: continuous variables | 194 |
| | Exercises | 196 |
| | Additional reading | 200 |
| 5 | Discrete systems of equations | 201 |
| 5.1 | Introduction | 201 |
| 5.2 | Basic matrices with <i>Mathematica</i> and <i>Maple</i> | 204 |
| 5.3 | Eigenvalues and eigenvectors | 208 |

| | | |
|--|--|-----|
| 5.4 | <i>Mathematica</i> and <i>Maple</i> for solving discrete systems | 214 |
| 5.5 | Graphing trajectories of discrete systems | 220 |
| 5.6 | The stability of discrete systems | 223 |
| 5.7 | The phase plane analysis of discrete systems | 235 |
| 5.8 | Internal and external balance | 239 |
| 5.9 | Nonlinear discrete systems | 245 |
| | Exercises | 247 |
| | Additional reading | 250 |
| 6 | Optimal control theory | 251 |
| 6.1 | The optimal control problem | 251 |
| 6.2 | The Pontryagin maximum principle: continuous model | 252 |
| 6.3 | The Pontryagin maximum principle: discrete model | 259 |
| 6.4 | Optimal control with discounting | 265 |
| 6.5 | The phase diagram approach to continuous time control models | 270 |
| | Exercises | 283 |
| | Additional reading | 285 |
| 7 | Chaos theory | 286 |
| 7.1 | Introduction | 286 |
| 7.2 | Bifurcations: single-variable case | 287 |
| 7.3 | The logistic equation, periodic-doubling bifurcations and chaos | 293 |
| 7.4 | Feigenbaum's universal constant | 301 |
| 7.5 | Sarkovskii theorem | 302 |
| 7.6 | Van der Pol equation and Hopf bifurcations | 304 |
| 7.7 | Strange attractors | 307 |
| 7.8 | Rational choice and erratic behaviour | 312 |
| 7.9 | Inventory dynamics under rational expectations | 315 |
| | Exercises | 319 |
| | Additional reading | 321 |
| PART II Applied economic dynamics | | |
| 8 | Demand and supply models | 325 |
| 8.1 | Introduction | 325 |
| 8.2 | A simple demand and supply model in continuous time | 326 |
| 8.3 | The cobweb model | 332 |
| 8.4 | Cobwebs with <i>Mathematica</i> and <i>Maple</i> | 338 |
| 8.5 | Cobwebs in the phase plane | 339 |
| 8.6 | Cobwebs in two interrelated markets | 346 |
| 8.7 | Demand and supply with stocks | 349 |
| 8.8 | Stability of the competitive equilibrium | 353 |
| 8.9 | The housing market and demographic changes | 358 |
| 8.10 | Chaotic demand and supply | 363 |

| | | |
|-----------|---|------------|
| | Appendix 8.1 Obtaining cobwebs using <i>Mathematica</i> and <i>Maple</i> | 367 |
| | Exercises | 371 |
| | Additional reading | 374 |
| 9 | Dynamic theory of oligopoly | 375 |
| | 9.1 Static model of duopoly | 375 |
| | 9.2 Discrete oligopoly models with output adjusting completely and instantaneously | 377 |
| | 9.3 Discrete oligopoly models with output not adjusting completely and instantaneously | 389 |
| | 9.4 Continuous modelling of oligopoly | 398 |
| | 9.5 A nonlinear model of duopolistic competition (R&D) | 405 |
| | 9.6 Schumpeterian dynamics | 414 |
| | Exercises | 419 |
| | Additional reading | 423 |
| 10 | Closed economy dynamics | 424 |
| | 10.1 Goods market dynamics | 425 |
| | 10.2 Goods and money market dynamics | 429 |
| | 10.3 IS-LM continuous model: version 1 | 431 |
| | 10.4 Trajectories with <i>Mathematica</i> , <i>Maple</i> and <i>Excel</i> | 437 |
| | 10.5 Some important propositions | 442 |
| | 10.6 IS-LM continuous model: version 2 | 447 |
| | 10.7 Nonlinear IS-LM model | 453 |
| | 10.8 Tobin–Blanchard model | 455 |
| | 10.9 Conclusion | 465 |
| | Exercises | 467 |
| | Additional reading | 469 |
| 11 | The dynamics of inflation and unemployment | 470 |
| | 11.1 The Phillips curve | 470 |
| | 11.2 Two simple models of inflation | 472 |
| | 11.3 Deflationary ‘death spirals’ | 484 |
| | 11.4 A Lucas model with rational expectations | 490 |
| | 11.5 Policy rules | 493 |
| | 11.6 Money, growth and inflation | 494 |
| | 11.7 Cagan model of hyperinflation | 500 |
| | 11.8 Unemployment and job turnover | 506 |
| | 11.9 Wage determination models and the profit function | 509 |
| | 11.10 Labour market dynamics | 513 |
| | Exercises | 516 |
| | Additional reading | 518 |
| 12 | Open economy dynamics: sticky price models | 519 |
| | 12.1 The dynamics of a simple expenditure model | 519 |
| | 12.2 The balance of payments and the money supply | 524 |

| | | |
|-----------|--|------------|
| 12.3 | Fiscal and monetary expansion under fixed exchange rates | 532 |
| 12.4 | Fiscal and monetary expansion under flexible exchange rates | 539 |
| 12.5 | Open economy dynamics under fixed prices and floating | 545 |
| | Exercises | 551 |
| | Additional reading | 552 |
| 13 | Open economy dynamics: flexible price models | 553 |
| 13.1 | A simplified Dornbusch model | 554 |
| 13.2 | The Dornbusch model | 559 |
| 13.3 | The Dornbusch model: capital immobility | 564 |
| 13.4 | The Dornbusch model under perfect foresight | 567 |
| 13.5 | Announcement effects | 573 |
| 13.6 | Resource discovery and the exchange rate | 581 |
| 13.7 | The monetarist model | 586 |
| | Exercises | 589 |
| | Additional reading | 592 |
| 14 | Population models | 593 |
| 14.1 | Malthusian population growth | 593 |
| 14.2 | The logistic curve | 596 |
| 14.3 | An alternative interpretation | 601 |
| 14.4 | Multispecies population models: geometric analysis | 603 |
| 14.5 | Multispecies population models: mathematical analysis | 619 |
| 14.6 | Age classes and projection matrices | 626 |
| | Appendix 14.1 Computing a and b for the logistic equation using <i>Mathematica</i> | 630 |
| | Appendix 14.2 Using <i>Maple</i> to compute a and b for the logistic equation | 631 |
| | Appendix 14.3 Multispecies modelling with <i>Mathematica</i> and <i>Maple</i> | 632 |
| | Exercises | 634 |
| | Additional reading | 637 |
| 15 | The dynamics of fisheries | 638 |
| 15.1 | Biological growth curve of a fishery | 638 |
| 15.2 | Harvesting function | 644 |
| 15.3 | Industry profits and free access | 647 |
| 15.4 | The dynamics of open access fishery | 650 |
| 15.5 | The dynamics of open access fishery: a numerical example | 654 |
| 15.6 | The fisheries control problem | 658 |
| 15.7 | Schooling fishery | 661 |
| 15.8 | Harvesting and age classes | 669 |

| | | |
|-----|---|------------|
| | Exercises | 673 |
| 232 | Additional reading | 676 |
| 238 | Answers to selected exercises | 677 |
| 248 | Bibliography | 688 |
| 251 | Author index | 697 |
| 252 | Subject index | 700 |
| 252 | 9.2 Additional reading | |
| 253 | 9.3 Exercises | |
| 254 | 10.1 A simplified Dornbusch model | |
| 259 | 10.2 The Dornbusch model | |
| 264 | 10.3 The Dornbusch model: capital mobility | |
| 267 | 10.4 The Dornbusch model under perfect foresight | |
| 273 | Exercises | |
| 281 | Additional reading | |
| 286 | 10.5 Resource discovery and the exchange rate | |
| 287 | 10.6 The monetary model | |
| 287 | Exercises | |
| 292 | 10.1 Goods market dynamics | |
| 292 | 10.2 Goods and money market dynamics | |
| 293 | 10.3 IS-LM continuous model version 1 | |
| 293 | 10.4 Trajectories with $\lambda < 0$ | |
| 293 | 10.5 Malthusian population growth | |
| 296 | 10.6 The logistic curve | |
| 301 | 10.7 An alternative interpretation of the IS-LM model | |
| 303 | 10.8 Multispecies population models: numerical analysis | |
| 319 | 10.9 Multispecies population models: mathematical analysis | |
| 328 | 10.10 Age classes and projection matrices | |
| 330 | Appendix 10.1 Computing λ and μ for the logistic equation using Mathematica | |
| 331 | Appendix 10.2 Using Maple to compute λ and μ for the Malthusian model and the logistic equation | |
| 331 | 11.1 The Phillips curve | |
| 332 | Appendix 11.3 Multispecies modelling with Mathematica and Maple | |
| 332 | 11.2 Deflationary 'debt spirals' | |
| 334 | Exercises | |
| 337 | 11.4 A Lucas model with rational expectations | |
| 337 | 11.5 Policy rules | |
| 337 | 11.6 Money and growth | |
| 338 | 11.7 The dynamics of fishery harvesting | |
| 338 | 11.8 Biological growth and harvesting | |
| 344 | 11.9 Wage determination in a two-sector model | |
| 347 | 11.10 Industry profits and firm entry/exit | |
| 350 | Exercises | |
| 354 | Example | |
| 357 | 12.0 The Solow growth model | |
| 361 | 12.1 Solow growth model: a numerical example | |
| 369 | 12.2 Harvesting and the Solow model | |
