	<i>Preface to the second edition</i>	page xi
	<i>Preface to the first edition</i>	xiii
PART I	Dynamic modelling	
1	Introduction	3
1.1	What this book is about	3
1.2	The rise in economic dynamics	5
1.3	Stocks, flows and dimensionality	8
1.4	Nonlinearities, multiple equilibria and local stability	12
1.5	Nonlinearity and chaos	15
1.6	Computer software and economic dynamics	17
1.7	<i>Mathematica</i> and <i>Maple</i>	20
1.8	Structure and features	24
	Additional reading	25
2	Continuous dynamic systems	26
2.1	Some definitions	26
2.2	Solutions to first-order linear differential equations	37
2.3	Compound interest	39
2.4	First-order equations and isoclines	41
2.5	Separable functions	45
2.6	Diffusion models	53
2.7	Phase portrait of a single variable	54
2.8	Second-order linear homogeneous equations	59
2.9	Second-order linear nonhomogeneous equations	64
2.10	Linear approximations to nonlinear differential equations	66
2.11	Solving differential equations with <i>Mathematica</i>	70
2.12	Solving differential equations with <i>Maple</i>	73
	Appendix 2.1 Plotting direction fields for a single equation with <i>Mathematica</i>	77
	Appendix 2.2 Plotting direction fields for a single equation with <i>Maple</i>	79
	Exercises	80
	Additional reading	84

3	Discrete dynamic systems	85
3.1	Classifying discrete dynamic systems	85
3.2	The initial value problem	86
3.3	The cobweb model: an introduction	87
3.4	Equilibrium and stability of discrete dynamic systems	88
3.5	Solving first-order difference equations	99
3.6	Compound interest	105
3.7	Discounting, present value and internal rates of return	108
3.8	Solving second-order difference equations	110
3.9	The logistic equation: discrete version	118
3.10	The multiplier–accelerator model	123
3.11	Linear approximation to discrete nonlinear difference equations	127
3.12	Solow growth model in discrete time	130
3.13	Solving recursive equations with <i>Mathematica</i> and <i>Maple</i>	131
	Appendix 3.1 Two-cycle logistic equation using <i>Mathematica</i>	135
	Appendix 3.2 Two-cycle logistic equation using <i>Maple</i>	137
	Exercises	138
	Additional reading	141
4	Systems of first-order differential equations	142
4.1	Definitions and autonomous systems	142
4.2	The phase plane, fixed points and stability	145
4.3	Vectors of forces in the phase plane	149
4.4	Matrix specification of autonomous systems	156
4.5	Solutions to the homogeneous differential equation system: real distinct roots	160
4.6	Solutions with repeating roots	162
4.7	Solutions with complex roots	164
4.8	Nodes, spirals and saddles	166
4.9	Stability/instability and its matrix specification	178
4.10	Limit cycles	179
4.11	Euler's approximation and differential equations on a spreadsheet	183
4.12	Solving systems of differential equations with <i>Mathematica</i> and <i>Maple</i>	186
	Appendix 4.1 Parametric plots in the phase plane: continuous variables	194
	Exercises	196
	Additional reading	200
5	Discrete systems of equations	201
5.1	Introduction	201
5.2	Basic matrices with <i>Mathematica</i> and <i>Maple</i>	204
5.3	Eigenvalues and eigenvectors	208

5.4	<i>Mathematica</i> and <i>Maple</i> for solving discrete systems	214
5.5	Graphing trajectories of discrete systems	220
5.6	The stability of discrete systems	223
5.7	The phase plane analysis of discrete systems	235
5.8	Internal and external balance	239
5.9	Nonlinear discrete systems	245
	Exercises	247
	Additional reading	250

6	Optimal control theory	251
6.1	The optimal control problem	251
6.2	The Pontryagin maximum principle: continuous model	252
6.3	The Pontryagin maximum principle: discrete model	259
6.4	Optimal control with discounting	265
6.5	The phase diagram approach to continuous time control models	270
	Exercises	283
	Additional reading	285

7	Chaos theory	286
7.1	Introduction	286
7.2	Bifurcations: single-variable case	287
7.3	The logistic equation, periodic-doubling bifurcations and chaos	293
7.4	Feigenbaum's universal constant	301
7.5	Sarkovskii theorem	302
7.6	Van der Pol equation and Hopf bifurcations	304
7.7	Strange attractors	307
7.8	Rational choice and erratic behaviour	312
7.9	Inventory dynamics under rational expectations	315
	Exercises	319
	Additional reading	321

PART II Applied economic dynamics

8	Demand and supply models	325
8.1	Introduction	325
8.2	A simple demand and supply model in continuous time	326
8.3	The cobweb model	332
8.4	Cobwebs with <i>Mathematica</i> and <i>Maple</i>	338
8.5	Cobwebs in the phase plane	339
8.6	Cobwebs in two interrelated markets	346
8.7	Demand and supply with stocks	349
8.8	Stability of the competitive equilibrium	353
8.9	The housing market and demographic changes	358
8.10	Chaotic demand and supply	363

	Appendix 8.1 Obtaining cobwebs using <i>Mathematica</i> and <i>Maple</i>	367
	Exercises	371
	Additional reading	374
9	Dynamic theory of oligopoly	375
	9.1 Static model of duopoly	375
	9.2 Discrete oligopoly models with output adjusting completely and instantaneously	377
	9.3 Discrete oligopoly models with output not adjusting completely and instantaneously	389
	9.4 Continuous modelling of oligopoly	398
	9.5 A nonlinear model of duopolistic competition (R&D)	405
	9.6 Schumpeterian dynamics	414
	Exercises	419
	Additional reading	423
10	Closed economy dynamics	424
	10.1 Goods market dynamics	425
	10.2 Goods and money market dynamics	429
	10.3 IS-LM continuous model: version 1	431
	10.4 Trajectories with <i>Mathematica</i> , <i>Maple</i> and <i>Excel</i>	437
	10.5 Some important propositions	442
	10.6 IS-LM continuous model: version 2	447
	10.7 Nonlinear IS-LM model	453
	10.8 Tobin–Blanchard model	455
	10.9 Conclusion	465
	Exercises	467
	Additional reading	469
11	The dynamics of inflation and unemployment	470
	11.1 The Phillips curve	470
	11.2 Two simple models of inflation	472
	11.3 Deflationary ‘death spirals’	484
	11.4 A Lucas model with rational expectations	490
	11.5 Policy rules	493
	11.6 Money, growth and inflation	494
	11.7 Cagan model of hyperinflation	500
	11.8 Unemployment and job turnover	506
	11.9 Wage determination models and the profit function	509
	11.10 Labour market dynamics	513
	Exercises	516
	Additional reading	518
12	Open economy dynamics: sticky price models	519
	12.1 The dynamics of a simple expenditure model	519
	12.2 The balance of payments and the money supply	524

12.3	Fiscal and monetary expansion under fixed exchange rates	532
12.4	Fiscal and monetary expansion under flexible exchange rates	539
12.5	Open economy dynamics under fixed prices and floating	545
	Exercises	551
	Additional reading	552
13	Open economy dynamics: flexible price models	553
13.1	A simplified Dornbusch model	554
13.2	The Dornbusch model	559
13.3	The Dornbusch model: capital immobility	564
13.4	The Dornbusch model under perfect foresight	567
13.5	Announcement effects	573
13.6	Resource discovery and the exchange rate	581
13.7	The monetarist model	586
	Exercises	589
	Additional reading	592
14	Population models	593
14.1	Malthusian population growth	593
14.2	The logistic curve	596
14.3	An alternative interpretation	601
14.4	Multispecies population models: geometric analysis	603
14.5	Multispecies population models: mathematical analysis	619
14.6	Age classes and projection matrices	626
	Appendix 14.1 Computing a and b for the logistic equation using <i>Mathematica</i>	630
	Appendix 14.2 Using <i>Maple</i> to compute a and b for the logistic equation	631
	Appendix 14.3 Multispecies modelling with <i>Mathematica</i> and <i>Maple</i>	632
	Exercises	634
	Additional reading	637
15	The dynamics of fisheries	638
15.1	Biological growth curve of a fishery	638
15.2	Harvesting function	644
15.3	Industry profits and free access	647
15.4	The dynamics of open access fishery	650
15.5	The dynamics of open access fishery: a numerical example	654
15.6	The fisheries control problem	658
15.7	Schooling fishery	661
15.8	Harvesting and age classes	669

	Exercises	673
232	Additional reading	676
238	Answers to selected exercises	677
248	Bibliography	688
251	Author index	697
252	Subject index	700
252	9.2 Additional reading	
252	9.3 Open economy dynamics: flexible price models	
254	10.1 A simplified Dornbusch model	
259	10.2 The Dornbusch model	
264	10.3 The Dornbusch model: capital mobility	
267	10.4 The Dornbusch model under perfect foresight	
273	Exercises	
281	Additional reading	
286	10.5 Resource discovery and the exchange rate	
287	10.6 The monetary model	
287	Exercises	
292	10.1 Goods market dynamics	
292	10.2 Goods and money market dynamics	
293	10.3 IS-LM continuous	
293	10.4 Trajectories with $M-L-SI$	
293	10.5 Malthusian population growth	
296	10.6 The logistic curve	
301	10.7 An alternative interpretation of the M-L-SI model	
303	10.8 Multispecies population models: geometric analysis	
319	10.9 Multispecies population models: mathematical analysis	
328	10.10 Age classes and projection matrices	
330	Appendix 10.1 Computing λ and \mathbf{v} for the logistic equation using Mathematica	
331	Appendix 10.2 Using Maple to compute λ and \mathbf{v} for the Malthusian model and the logistic equation	
331	11.1 The Phillips curve	
332	11.2 Multispecies modelling with Mathematica	
332	11.3 Deflationary spirals	
334	11.4 A Lucas model with labour search	
337	11.5 Policy rules	
337	11.6 Money and growth	
338	11.7 The dynamics of fishery harvesting	
338	11.8 Biological growth and harvesting	
341	11.9 Wage determination	
343	11.10 Labour search and the real business cycle model	
350	Exercises	
354	example	
357	12.0 The Solow growth model	
361	12.1 Scholasticism and the real business cycle	
369	12.2 Harrodian and post-harrodian growth
