1. Habitat monitoring theory	1
1.1 Ecological monitoring and the environment	1
1.2 What is ecological monitoring?	2
1.3 The uses of ecological monitoring	3
1.4 The history of ecological monitoring	3
1.5 Ecological monitoring in practice	4
1.6 Ecological monitoring data	6
1.7 Ground, aerial and satellite monitoring	7
1.7.1 Ground monitoring	7
1.7.2 The aerial survey	9
1.7.3 Satellite monitoring	14
1.8 The ecological monitoring unit	15
1.9 The costs of ecological monitoring	16
1.10 Developing an ecological monitoring programme	20
1.11 Towards a global system	20
References	21
2. Ground monitoring	22
2.1 Climate measurements	23
2.1.1 Meteorological methods and equipment	23
2.1.2 Types of station	24
2.1.3 Rain-gauge distribution and type	25
2.1.4 Other climatic factors	25
2.1.4.1 Evaporation and transpiration	25
2.1.4.2 Solar radiation	26
2.1.5 Statistical techniques	26
2.1.5.1 Limitations of conventional statistics	26
2.1.5.2 Possibilities of stochastic approaches	27
2.1.6 Rain-gauge network design: a case study	28
2.2 Preparation of a base map	29
2.3 Soil mapping and interpretation	31
2.3.1 How the environment affects soil formation	31
2.3.2 The soil profile	34
2.3.3 Describing the soil profile	35
2.3.4 Soil sampling	36
2.3.5 Soil analysis	37
2.3.6 Field methods in soil survey	38

x *Contents*

2.4 Land-form classification	40
2.4.1 Landscape morphometry	44
2.4.2 Surveys along hillslope transects	46
2.5 Soil erosion and sediment yields	48
2.5.1 Catchment or drainage-basin studies	48
2.5.1.1 Methods: monitoring of sediment loads	49
2.5.1.2 Methods: suspended load	49
2.5.1.3 Methods: bedload	50
2.5.1.4 Methods: reservoir sedimentation surveys	51
2.5.1.5 Experimental design for catchment studies	53
2.5.2 Process studies	53
2.5.2.1 Short-term field observations	54
2.5.2.2 Landslides and debris flows	54
2.5.2.3 Biological activity	54
2.5.2.4 Rill and gully erosion	55
2.5.2.5 Surface erosion	56
2.5.2.6 Monitoring surface erosion	57
2.5.2.7 Monitoring rill, gully, and streambank erosion	59
2.6 Vegetation monitoring	60
2.6.1 The vegetation survey	62
2.6.2 Sampling vegetation	65
2.6.3 Vegetation sampling methods	67
2.6.3.1 Plot sampling	67
2.6.3.2 Intercept methods	69
2.6.3.3 Plotless sampling	71
2.6.4 Summarizing and analysing community composition data	72
2.6.5 Biomass and productivity measurements	73
2.6.6 Permanent study plots	75
2.6.7 Standardizing data collection	76
2.7 Large mammal herbivores	77
2.7.1 Use of primary production by wild and domestic herbivores	81
2.7.2 Population ranges and the use of vegetation types	82
2.7.2.1 Counting the occurrence of animals	83
2.7.2.2 Removing or adding known numbers of animals	87
2.7.2.3 Methods involving animal sign	89
2.7.2.4 Use of vegetation types	90
2.7.3 Herbivore diets	91
2.7.3.1 Diet components	91
2.7.3.2 Units of measurement	92
2.7.3.3 Methods of obtaining samples	92
2.7.3.4 Analysis	96
2.7.3.5 Impact of herbivores on the vegetation	102
2.8 Nutrition and population dynamics	104
2.8.1 Body condition	104
2.8.1.1 General body condition	105
2.8.1.2 Fat reserves	106
2.8.1.3 Protein reserves	106
2.8.2 Nutritional value of the diet	107
2.8.2.1 Protein-energy nutrition	108

2.8.3 Analysis of population dynamics	108
2.8.3.1 Ageing animals	108
2.8.3.2 Reproduction	110
2.8.3.3 Disease, parasitism, mortality, and life tables	110
2.9 Social and economic surveys	111
2.9.1 Survey design	113
2.9.2 Sampling methods	114
2.9.3 Data-gathering techniques	117
2.9.4 Organization of the survey	123
2.9.5 Data analysis	129
2.9.6 Conclusion	130
