Foreword by Roland N. Horne	xix
Foreword by Bernard J. Duroc-Danner	xx
Chapter 1. Pressure Transient Analysis in Drawdown and Buildup	
Background to Transient Pressure Analysis	1
Introduction	1
Development of pressure testing	2
Exploration well testing	4
Radial Flow Theory	14
The basic flow equations	14
Fluid of constant compressibility	16
Further development of the accumulation term	17
Linearization of the radial flow equation	19
Initial and boundary conditions	20
Dimensionless form of the diffusivity equation	23
The line source analytical solution in an infinite reservoir	27
Wellbore damage and improvement effects	30
Analytical solution for the case of a bounded circular reservoir	32
Analytical solution for a constant pressure outer boundary	35
SPE field units	36
The depth of investigation and radius of drainage	37
The dynamics of reservoir pressure response	44
Pressure Drawdown Testing	46
Introduction	46
Pressure drawdown analysis in infinite-acting reservoirs	47
The Principle of Superposition	52
Introduction	52
Multiple-well situations	52
Variable rate situations	53
Pressure Build-up Testing	55
Introduction	55
Pressure buildup test analysis during the infinite-acting period	57
After production	61
Determination of reservoir parameters	63
Impulse test in a tight reservoir	68
Peaceman probe radius	68
Transient productivity index, J_t	70
Notes	72

Chapter 2. Wellbore Storage and Type Curve Matching

Wellbore Storage.....	73
Introduction	73
Liquid-filled wellbore	75
Early time behavior of a well with storage	79
Practical use of the wellbore storage calculation	81
Solutions to the diffusivity equation in Laplace space.....	82
The Stehfest algorithm	84
Well with storage and skin	85
Type Curve Matching	88
Introduction	88
Log-log type curve	88
Type curve based on t_D/C_D	91
Type Curve Matching using the Pressure Derivative.....	96
Derivative analysis	98
Middle time region (MTR) derivative match	104
t_D/C_D type curve including the derivative	105
Finite wellbore radius solution.....	107
Analysis of Buildup Responses—The Producing Time Effect.....	111
Equivalent drawdown time.....	111
Desuperposition.....	117
Nonideal Wellbore Storage.....	119
Introduction	119
Gas phase redistribution.....	124
Empirical models of nonideal wellbore storage	130
Rising liquid level.....	135
Downhole shut-in tools.....	139
Falling liquid level in water injection wells	143
Numerical wellbore simulator	143
Well Cleanup and Changing Skin	145
Theory	145
Field examples.....	147
Notes.....	152

Chapter 3. Semi-Infinite System Late Transient Analysis

Introduction to Fault Detection.....	153
Drawdown Analysis in the Case of a Single Linear Discontinuity.....	154
Hemiradial flow	158
Build-up Analysis in the Case of a Single No-flow Boundary	160
Perturbed radial cylindrical buildup.....	162
Radius of investigation in build-up testing	164
Reservoirs with Multiple No-flow Boundaries	167
Elementary Fault Systems.....	168

Constant Rate Drawdown Theory for Semi-infinite Systems.....	171
Analysis Methods for Constant Rate Drawdown (CRD) Tests.....	175
t_D/L_D^2 derivative type curve.....	176
Constant Rate Build-up (CRB) Theory for Semi-infinite Systems.....	179
Optimum form of build-up derivative presentation.....	182
Field Examples.....	184
North Sea example—Oseberg Field.....	184
Partially Communicating Faults (PCFs).....	186
Introduction.....	186
Active well response.....	188
Linear composite system.....	191
Finite element method (FEM) numerical simulation of a PCF.....	193
Observation well response.....	193
Linear composite system.....	200
Homogeneous system.....	201
PCF in a channel reservoir.....	202
Pulse testing.....	206
Notes.....	208
 Chapter 4. Well in a Bounded Drainage Area	
Reservoir Limit Testing.....	209
Introduction.....	209
Average reservoir pressure.....	210
Dietz semi-steady-state shape factors.....	212
Full analytical solution.....	213
Semi-steady-state depletion and reservoir limit testing.....	214
Analysis of a reservoir limit test.....	217
Pressure Build-up Analysis in Bounded Systems.....	220
Introduction.....	220
Conditions for applicability of Horner analysis.....	225
Determination of the skin factor.....	227
Matthews, Brons, and Hazebroek (MBH) method.....	228
Extended drawdown test with intermittent buildups.....	230
Reservoir monitoring.....	232
Concept of Synthetic Flowing Time.....	232
Single well in a closed compartment.....	232
Multiple well situations.....	238
Synthetic test problem.....	241
Developed Reservoir Effects —Slider's Method.....	244
Introduction.....	244
North Sea field example.....	249
Libyan field example.....	253
Determination of average pressure \bar{p}	254
Interference testing.....	255
Notes.....	258

Chapter 5. Variable Rate Well Test Analysis

Introduction	259
Step Rate Flow Schedule	261
General superposition formula for step rate flow schedule	262
Infinite-acting Radial-cylindrical Flow	264
Drawdown theory	264
Drawdown superposition time function	265
Variable rate drawdown (VRD) semilog plot	265
Simplified variable rate analysis	269
Build-up theory	270
Evaluation of the skin factor S	271
Analysis of a Variable Surface Rate Buildup Using Drawdown Type Curve	272
Introduction	272
Synthetic afterflow deconvolution	274
Generalized Superposition Methods	276
Derivative diagnostic and type curve matching	284
Desuperposition and the Role of the Extrapolated Pressure	286
Time Transformation for Variable Properties	286
Superposition with a non-Darcy skin effect	289
Superposition Theory for Linear Flow	292
Linear flow (root of time) derivative	296
Variable Rate Extended Drawdown Testing	297
Bounded system behavior	297
Approximate deconvolution	300
Effect of build-up periods	306
Filtering for material balance studies	308
Pseudopressure and pseudotime transformation	309
Field example of an extended draw-down test	309
Further synthetic example	311
Permanent downhole gauges (PDGs)	313
Afterflow Measurement and Convolution	314
Introduction	314
Field example of afterflow convolution	316
Slug Testing, Closed Chamber Testing, and Pumping Well Buildups	320
Slug testing	320
Slug test analytical solution	329
Build-up analysis following variable rate drawdown	333
Integral method for the slug test flow period	334
Russian field example	340
Multiple slug test periods	345
Application to coal bed methane	348
Closed chamber test	349
Stress-dependent permeability	356
Notes	361

Chapter 6. Channel Sands and Parallel Faults

Introduction 363

Parallel Boundary Systems 367

 Constant rate drawdown (CRD) in a semi-infinite system..... 367

 Constant rate buildup (CRB) 373

 Related systems..... 382

 Offset well positions 386

 Linear flow derivative 389

Bounded Rectangle 391

 Constant rate drawdown..... 391

 Synthetic example 395

 Semi-steady-state depletion..... 400

Constant Rate Buildup in a Closed Rectangle..... 401

 Build-up theory for rectangular systems 401

 Desuperposition analysis 405

 Use of the semi-infinite-acting time in build-up analysis..... 408

 Matthews, Brons, and Hazebroek (MBH) method 409

 Detection of a closed system 409

 Amplified treatment of the extrapolated pressure..... 415

Depletion in a Channel System 418

Fluvial Systems 425

 Sequence stratigraphy 425

 Bilinear flow 434

 Geostatistics 434

Constant-Pressure Boundary..... 437

Well Test Design..... 437

Notes..... 438

Chapter 7. Constant Pressure Boundaries

Constant-pressure Upper or Lower Boundary 439

 Introduction 439

 Theory 442

 General derivative-type curve for a limited entry 449

 Steady-state productivity 449

 Depth of investigation with a constant-pressure boundary 452

 Analysis of the drawdown behavior 454

 The effect of wellbore storage 455

Miller–Dyes–Hutchison (MDH) Method 457

 Determination of reservoir pressure..... 460

 Infinite-acting radial flow 461

Field Examples..... 463

Single Vertical Constant-pressure Boundary 466

 Non-intersecting vertical fracture..... 472

Notes..... 474

Chapter 8. Vertically Fractured Wells

Introduction	475
Uniform Flux and Infinite Conductivity Fractures.....	476
Introduction	476
Linear flow theory	477
Constant rate solution—uniform flux case	479
Constant rate solution—infinite conductivity case	481
Linear Flow Theory	483
Pseudoradial flow	488
Semi-steady-state (SSS) productivity index	489
Effect of wellbore storage	490
Type Curve Analysis	492
Effect of fracture face skin	494
Semilog analysis	495
Analysis of Build-up or Fall-off Tests	496
Specialized plots for buildup	496
Desuperposition.....	498
Generalized superposition plot	502
Automatic matching or nonlinear parameter estimation.....	503
Iranian field example of an acidized well.....	503
North Sea field example	506
Limited height fracture	507
Finite Conductivity Hydraulic Fractures	508
Finite conductivity fracture p_D function.....	510
Bilinear flow regime.....	513
Pseudolinear flow.....	519
Pseudoradial flow.....	522
Type curve matching.....	523
Permeability from prefracture test	524
Transient and SSS production	526
Layered systems	530
Bilinear Flow with Fracture Face Skin and Well-bore Storage.....	531
Pseudolinear flow.....	537
Nonintersecting (Distant) Fracture.....	542
Notes.....	548

Chapter 9. Dual Porosity Systems

Introduction	549
Models of Dual Porosity Systems.....	555
Radial diffusivity equation for the fracture system	555
Dimensionless groups	555
Material balance equation for the matrix system.....	557
Pseudo-semi-steady-state analysis	558
Dimensionless interporosity flow parameter	564

Warren and root PSSS dual porosity model 565

Transient interporosity flow model 566

Two-layer systems 570

General Solution to the Double Porosity Diffusivity Equation 573

Wellbore storage and skin 576

Model Pressure Responses 577

Behavior of the PSSS dual porosity model 577

Behavior of the transient dual porosity model 582

Effect of wellbore storage and skin 587

Analysis Methods 588

Constant rate drawdown—semilog plot 588

Constant rate buildup (CRB) analysis 589

Well test analysis for dual porosity systems 592

Automatic matching 593

Fracture Network Theory 594

Iranian Field Examples 599

Well Q-18 599

Well X-33T1 600

Radial Composite Behavior 601

Notes 603

Chapter 10. Limited Entry and Double Permeability Systems

Well with Limited Entry or Partial Penetration 605

Introduction 605

Drawdown behavior of partially penetrating wells 606

Effects of Wellbore Storage 610

Analysis of early time response using type curve matching 612

Analytical solution 613

Derivative type curve match 618

Determination of vertical permeability 618

Negative skin case 621

Spherical flow theory 623

Double Permeability Model 628

Introduction 628

Limiting form of the dual permeability model 635

Aquifer support 637

Double permeability behavior 639

Analytical Solutions in Laplace Space 640

Case II—Only One Layer Perforated 643

Case II—Fundamental (constant-rate) active layer response 645

Well test interpretation 648

Murchison field 655

Vertical Interference Testing	655
Observation layer response	656
Effect of wellbore storage	662
Vertical Interference Testing Field Data	664
$C_D\lambda$ Type Curve	666
Simulation of vertical interference tests	667
Field examples	669
Conclusions	672
Shale Lens Model	672
Notes	676
Chapter 11. Radial Composite Systems	
Radial Composite Systems	677
Introduction	677
Fundamental response	681
Derivative type curves	688
Build-up behavior	692
Aquifer influx	694
Gas block and liquid condensate dropout	702
Unfavorable displacement situations	706
Negative skin situation	706
Geological setting for the radial composite model	707
Formation damage as a radial composite	713
Radial Composite with a Closed Outer Boundary	715
Thermally Induced Fracturing (TIF)	716
Introduction	716
Rock mechanics of thermal fracturing	719
Simplified model of equilibrium fracture half length	724
Interpretation of pressure injection and fall-off tests	727
Step-rate test (SRT)	729
Fall-off Tests in Water Injection Wells—Effect of Saturation Profile	730
Displacement theory	730
Determination of mobility profiles	733
Determination of flood front radius, r_{ff}	735
Average pressure of inner region	735
Fall-off Tests in Gas Injection Wells	739
Notes	739
Chapter 12. Horizontal Wells	
Introduction	741
Flow Regimes	745
Vertical radial flow	748
Effect of anisotropy	751

Anisotropic parallel boundary solution 753

Fractured well solution 759

Horizontal pseudo-radial flow 761

General Solution for a Horizontal Well 763

 Derivative type curve 766

 Acidized horizontal wells 776

 Strip source solution 779

 Evaluation of the Green's function solution 787

 Pseudo-radial flow regime skin factor 788

 Vertical lateral boundaries 790

Analysis Methods Based on Specialist Plots 795

 Early time analysis—infinite-acting radial flow 795

 Derivative analysis 797

 Hemiradial vertical flow 798

 Intermediate time analysis—linear flow regime 800

 Late time analysis—horizontal pseudo-radial flow 803

 Build-up analysis 804

Transient Deliverability 805

Constant-pressure Boundary 807

Layered Commingled Systems 814

 Theory of a near-horizontal well penetrating several layers 814

 Synthetic example 819

 Horizontal multilateral wells 825

Effect of Lateral Boundaries 827

 Closed systems 827

 Dietz shape factors (C_A) 829

Highly Deviated (Slant) Wells 829

Hydraulically Fractured Horizontal Wells 832

Sinusoidal Wells 840

Radial Composite Behavior 841

Notes 842

Chapter 13. Gas Well Testing

Theory of Gas Well Testing 843

 Introduction 843

 Linearization of the radial flow equation for a real gas 844

 Constant-rate inner boundary condition 847

 Detection of depletion 851

Analysis Methods 854

 Constant Rate Drawdown (CRD) analysis 854

 Gas well field units 857

 Constant rate buildup (CRB) analysis 858

 Real gas pseudo-time t_a 862

Wellbore Storage in Gas Wells	865
Application of Agarwal pseudo-time transformation	865
Very low permeability reservoirs	874
Determination of rate-dependent skin coefficient D	876
Gas Reservoir Limit Testing	877
Behavior of a closed gas reservoir	877
Pseudo-time based on average pressure	877
Reservoir limit test	883
Variable (step) rate case	886
Semi-steady-state gas well deliverability	888
Simulated extended drawdown	890
Analytic simulation option	891
Step-rate Transient (SRT) Test	891
Methodology and test objectives	891
Variable rate drawdown (VRD) plot for gas wells	900
Prediction of the SSS deliverability of development wells	901
North Sea gas well test field example	902
Design of Step-rate Tests	906
Isochronal Testing and its Limitations	910
Reserves Proven by a Gas Well Test	917
Notes	917
Chapter 14. Automatic Model Matching	
Introduction	919
Structure of fundamental (CSFR) p_D functions or models	919
Interpretation methodology	923
Storage and interrogation of tabulated dimensionless responses	930
Real-time Convolution	932
Introduction	932
Ideal wellbore storage and skin	932
Nonideal wellbore storage	940
Time-dependent skin and wellbore storage coefficient	941
Application to gas wells	941
Automatic Matching	944
Nonlinear regression	944
Model selection	955
Selection of data points	955
Advantages and disadvantages of nonlinear regression	956
Production Analysis: Prediction of Production Decline	957
Transient deliverability	957
Fractured well example	961
Fetkovich approximation	964
Semi-steady-state depletion	966
Closed system p_D functions	973
Notes	973

Chapter 15. Two Cell Compartmentalized Systems

Extended Drawdown Behavior.....	975
Period of negligible support.....	979
Time to reach total system semi-steady-state.....	981
Dimensionless form of the material balance support.....	983
Superposition of material balance effect in a closed system.....	984
Late time drawdown derivative type curve.....	986
Analysis methods on the Cartesian graph.....	990
Extended Build-up Behavior.....	991
Derivative diagnostic.....	993
Exponential approach region.....	995
Analysis of transient and semi-infinite-acting period.....	997
Build-up analysis by desuperposition.....	998
Build-up derivative type curve.....	1000
Synthetic Example.....	1006
Total System Productivity Index.....	1012
Effect of a Poor Cement Bond.....	1015
Reservoir Engineering Aspects of Compartmentalization.....	1016
Field Examples.....	1017
Further Field Examples.....	1018
Katnook field.....	1018
Middle East carbonate.....	1021
Notes.....	1022

The following chapters are on the accompanying CD-ROM.

Chapter 16. Well Test Design

Introduction.....	1023
Background to test design.....	1023
Permeability estimate.....	1025
Review of seismic data.....	1026
Decision to Test or Not.....	1026
Objectives of the Test.....	1028
General objectives.....	1028
Skin cleanup.....	1032
Enhanced objectives.....	1033
Obtaining a permeability estimate.....	1034
Completion design.....	1036
Forecasting of development well deliverability.....	1037
Estimation of accessible hydrocarbon.....	1038
Tubing diameter selection.....	1040
Design Criteria.....	1041
Based on the depth of investigation.....	1041

Based on the duration of the wellbore storage effect.....	1042
Wireline shut-in tools (SITs)	1044
Based on the removal of tidal effects	1044
Low-permeability systems	1045
Incorporation of production logging	1046
Role of Simulation in Test Design	1047
Application of a nodal analysis package.....	1047
Role of analytical well test simulation	1052
Gauge selection and location	1053
Permanent downhole gauges	1054
Special Considerations for Gas Wells.....	1054
Classification of gas reservoirs.....	1054
Step-rate test design.....	1055
Design calculations related to wellbore storage	1057
Role of analytical simulation	1059
Rate control.....	1059
Problem of well cleanup	1060
Turner critical velocity	1063
Example gas well test design	1063
Estimation of reserves.....	1069
First gas well field example.....	1069
Second gas well field example	1071
Fractured wells	1071
Limitation on test rate due to environmental considerations	1072
Wellhead temperature constraints	1073
Compositional simulation	1073
Extremely high permeability	1073
Testing of the completion.....	1074
Testing of gas condensate wells.....	1074
Modern DST Testing Systems	1074
Separator selection.....	1074
Multiphase flow measurement	1076
Fluid disposal	1078
Notes.....	1078
Chapter 17. Multiphase Flow	
Introduction	1079
Linearization of the Continuity Equation	1084
Steady-state two-phase pseudopressure	1084
Radius of drainage	1086
Pseudopressure integrals	1088
Diffusivity Equation in Terms Of Two-Phase Pseudopressure	1091
Two-phase compressibility and pseudotime.....	1092
Two-phase material balance.....	1095
Analytical Solutions to the Linearized System	1096
Case where the reservoir pressure is above the dew point.....	1096

Analytical solutions in terms of two-phase pseudopressure	1101
Comparison with numerical simulation results	1102
Gas condensate well test methodology	1105
Reservoir pressure below the dew point	1107
Generation with a Pressure-dependent Viscosity Compressibility Product	1110
Sampling in Gas Condensate Systems	1111
Theory of Perrine and Martin	1114
Steady-state pseudopressure for solution gas drive	1116
Transient flow in solution gas drive	1117
Semi-steady-state depletion	1118
Build-up analysis in solution gas drive	1119
Case Studies	1120
Arun field	1120
Cupiagua field	1126
North Rankine field	1129
Britannia field	1129
Non-Darcy Flow in Gas Condensate Well Tests	1133
Raghavan et al. Field Examples	1138
Numerical Simulation of Gas Condensate Well Tests	1144
Barrios and Osorio studies	1144
Role of compositional modeling	1157
Notes	1158
Chapter 18. Numerical Well Testing	
Numerical Techniques	1161
Introduction	1161
The finite element method	1167
Interaction of Geological Modeling and Well Test Interpretation	1167
Introduction	1167
Heriot-Watt fluvial reservoir project	1176
Geoskin concept	1184
Geological Object Framework	1185
Introduction	1185
Captain horizontal well	1191
Dual permeability with a horizontal well	1193
Nonintersecting fracture situations	1194
Shale lens problem	1198
Stacked channels	1201
Makassar Strait deepwater fields	1205
EPS derivative fingerprint library	1209
Multiple fault example	1209
Compartmentalized field example	1212
Conditional Simulation	1213

Interference Testing	1214
Introduction	1214
Dual permeability situations	1215
Vertical sealing faults with windows	1218
Conclusions	1221
Notes	1222
 Chapter 19. Layered Well Testing	
Introduction	1223
Direct measurement of layer pressures	1227
Well testing objectives	1229
Integration of well test interpretation and core analysis	1233
Commingled systems with horizontal wells	1234
Multilayer Convolution Algorithm	1234
Prediction of layer flow rates for a specified wellbore pressure history	1240
Two-Layer Situations	1242
Transient crossflow during buildup	1245
Early shut-in time rate transient	1245
Two-layer case studies	1247
Unequal initial pressure	1250
Incremental layer workover case	1252
Transient step-rate test (TSRT)	1252
Partially Bounded System	1253
Constant total rate drawdown	1253
Regime 1: Both layers infinite-acting	1257
Regime 2: Depletion of the bounded layer 1	1257
Regime 4: Layer 2 producing alone	1258
Draw-down type curve	1259
Buildup	1260
Derivative diagnostics	1263
Three-layer Synthetic Problem	1264
Dual Profile Build-up Test (DPBT)	1270
Basic form of DPBT	1270
Reservoir monitoring and automatic matching	1275
DPBT with NGWFT dual packer complement	1278
Transient Step-Rate Test	1279
Communicating Layers	1284
Introduction	1284
Pseudo-semi-steady-state (PSSS) crossflow model	1287
Embedded lens of high permeability—Geoskin	1294
Finite element numerical modelling	1306
Crossflow index	1307
Braided fluvial systems	1309
Development of crossflow modelling using partial productivity indices	1312
Design and simulation of workover treatments	1316

Synergistic Interpretation of Layered Well Tests 1319

- Integration of core analysis data 1319
- Effective flowing interval 1321
- Upscaling core and log permeability data 1326
- Natural fracturing 1330

Hydraulic Flow Units (HFUs)..... 1331

- Introduction 1331
- Fundamental theory..... 1332
- Hydraulic unit zonation process 1337
- Field examples from clastic reservoirs 1340
- Permeability prediction from core and log data..... 1343
- Siberian field example 1349
- Alternative lumped parameter approach..... 1352

Distributed Pressure Surveys 1354

Notes..... 1354

Chapter 20. Deconvolution in PTA

Introduction 1357

Convolution of a Variable Rate Response 1359

Iseger Algorithm..... 1361

Numerical Laplace Transformation 1369

Step Rate Schedules 1375

Deconvolution of a Variable Rate Response 1378

Application of Deconvolution 1382

- Determination of reservoir volume 1382

Further Simulated Test Problems 1401

- Gas well testing..... 1409

Application to Wireline Formation Testing..... 1410

- Mini-DST..... 1410

Depth of Investigation..... 1415

Real-time Deconvolution 1418

Permanent Downhole Gauge (PDG) Data..... 1424

Build-up Analysis 1441

Partial Datasets..... 1444

- Synthetic deconvolution 1471

Two-Cell Compartmentalized Systems 1472

Gas Well Testing..... 1476

- Shell field example 1476

Notes..... 1483

Index..... I-1
