

CONTENTS

Preface	9
Introduction	11
Co-operation of geologists with engineers	11
Chapter 1. Geological Investigations	15
1.1. Reconnaissance investigation	15
1.2. Detailed geological investigation	17
1.3. Geological investigation during construction	17
Chapter 2. Geological Maps and Sections	19
2.1. Types of geological maps	19
2.2. Engineering geological maps	20
2.3. Maps of geologically hazardous zones	23
2.4. Topographic base maps for geological mapping	24
2.5. Use of aerial photographs for geological mapping	25
2.6. Geological sections	26
Chapter 3. Mechanical Properties of Rocks	35
3.1. Physical background of the mechanical behaviour of rocks	36
3.2. Character of the planes of discontinuity and methods of representation	38
3.3. Physical and index properties of rocks	45
3.4. Deformation properties of rocks	44
3.5. Strength of rocks	83
3.6. Natural stress state in rocks	92
3.7. Statical solutions in engineering geology	96
3.8. Classification of rocks	99
Chapter 4. Subsurface Exploration	103
4.1. Test pits and trenches	103
4.2. Exploratory drifts	105
4.3. Sounding	107
4.4. Boreholes	108
4.5. Evaluation of subsurface exploration	124
4.6. Construction of geological sections from bore logs	132
4.7. Plan and lay-out of subsurface exploration	133
Chapter 5. Geophysical Methods	140
5.1. Geophysical methods used in the geological investigation of a site	140
5.2. Determination of rock properties	143
5.3. Geophysical methods used in hydrogeological research	145

Chapter 6. Weathering of Rocks	146
6.1. Physical weathering	146
6.2. Products of Pleistocene physical weathering	150
6.3. Chemical weathering	156
6.4. Investigation of the weathered zone	159
Chapter 7. Slope Movements, Landslides	163
7.1. Economic significance of slope movements	163
7.2. Factors producing earth movements	164
7.3. Division of slope movements	166
7.4. Slope movements of surface deposits	170
7.5. Landslides in clayey rocks	179
7.6. Sliding movements of solid rocks	188
7.7. Specific types of slope movements	194
7.8. Stabilization of slopes in slide areas	197
Chapter 8. Excavation and Workability of Rocks	203
8.1. Resistance of rock to excavation	203
8.2. Drillability of rocks	207
8.3. Workability of rocks	208
8.4. Bulking (increase in volume) of rocks	209
Chapter 9. Geological Investigation of Building Material Deposits	211
9.1. Reconnaissance of a deposit	212
9.2. The aim of detailed engineering geological investigation	214
9.3. Basic principles of quarry opening	224
9.4. Deposits of sand and gravel	228
9.5. Working of building material and protection of the environment	232
Chapter 10. Foundation of Buildings and Industrial Structures	234
10.1. Demands made on the foundation of structures	234
10.2. Mechanical behaviour of foundation soils	242
10.3. Foundation and ground water	255
10.4. Foundation excavation	259
10.5. Choice of foundation method	263
10.6. Investigation of the building site	272
10.7. Evaluation of the site	273
10.8. Foundation conditions related to the regional geology	274
10.9. Measurement of deformations of structures	280
Chapter 11. Roads and Railways	284
11.1. Geological requirements on the design of transportation routes	284
11.2. Preliminary investigation for the general location of the route	285
11.3. Detailed investigation for route location	287
11.4. Cuttings and half-cuttings	290
11.5. Embankments	301
11.6. Roadways and their subgrades	303
11.7. Geological investigation for bridges and other structures	305
11.8. Activity of the engineering geologist during construction and maintenance	309
Chapter 12. Tunnels and Underground Power Plants	310
12.1. Introduction	310

12.2. Tasks of engineering geological research	314
12.3. Investigation of the geology of the area and general alignment of the tunnel	315
12.4. The hydrogeological conditions	318
12.5. Detailed investigation for the location of the tunnel	322
12.6. Mechanical behaviour of rock and pressure on tunnel lining . . .	328
12.7. Tunnelling methods	338
12.8. Rock temperature and ventilation	341
12.9. Hydraulic tunnels	342
12.10. Underground railway tunnels	355
Chapter 13. Engineering-geological Investigations for Hydraulic Structures	360
13.1. Reconnaissance investigation	360
13.2. Detailed geological investigation	361
13.3. Co-operation of engineering geologist during construction	363
13.4. Investigation of the damsite	364
13.5. Geomorphological and geological setting of the damsite	365
13.6. Damsites in igneous and metamorphic rocks	372
13.7. Damsites on sedimentary rocks	379
13.8. Foundation of gravity dams	393
13.9. Foundation of arch dams	402
13.10. Geological investigations for earth dams	404
13.11. Water-pressure tests and test grouting	416
13.12. Investigation of the reservoir area	435
13.13. Watertightness of the reservoir	436
13.14. Stability of reservoir banks	444
13.15. Siltation of reservoirs	451
13.16. Economic effects of impounding water	456
13.17. Discharge of water from the reservoir	457
13.18. Engineering-geological investigation of sites for power plants . .	461
Chapter 14. Tasks of Geological Investigation in Regional Planning and Envi- ronmental Policy	466
14.1. Man as a geological agent	466
14.2. Regional planning	468
14.3. Geological analysis	470
14.4. Hydrogeological analysis	472
14.5. Geological investigation in planning and building of settlements . .	475
Bibliography	484
Index	494
