LIST OF CONTRIBUTORS	xxi
PREFACE	xxiii
CHAPTER 1 Introduction to biomechanics	1
<i>Nick Stergiou</i>	
1.1 Introduction	1
1.2 The history of biomechanics	2
1.3 Areas of biomechanical inquiry: examples of diverse and unique questions in biomechanics	7
1.4 A quick look into the future of biomechanics	13
References	15
Suggested readings	16
CHAPTER 2 Basic biomechanics	17
<i>Aaron D. Likens and Nick Stergiou</i>	
2.1 Introduction	17
2.2 Analysis of movement.....	18
2.3 Basic terminology for analyzing movement	20
2.4 Basic bio considerations.....	27
2.5 Basic mechanics considerations	38
2.6 Summary and concluding remarks	60
References	60
Further readings.....	63
CHAPTER 3 Advanced biomechanics	65
<i>Barry T. Bates, Janet S. Dufek and Nick Stergiou</i>	
3.1 Injuries and biomechanics	65
3.2 Biomechanical statistics.....	70
3.3 Final considerations.....	76
References	77

CHAPTER 4	Why and how we move: the Stickman story.....	81
	<i>Barry T. Bates, Janet S. Dufek and Nick Stergiou</i>	
	4.1 Briefly introducing Stickman	81
	4.2 The Stickman's evolution of movement	81
	4.3 The Stickman's performance of movement.....	87
	4.4 The Stickman learns how to move	89
	4.5 The Stickman's mechanics	93
	4.6 The Stickman's goodbye.....	97
	References	97
CHAPTER 5	Power spectrum and filtering.....	99
	<i>Andreas Skiadopoulos and Nick Stergiou</i>	
	5.1 Introduction	99
	5.2 A simple composite wave.....	100
	5.3 Spectral analysis.....	103
	5.4 Fourier series.....	105
	5.5 Discrete Fourier analysis	107
	5.6 Stationarity and the discrete Fourier transform	122
	5.7 Short-time discrete Fourier transform.....	124
	5.8 Noise	127
	5.9 Data filtering.....	129
	5.10 Practical implementation.....	138
	5.11 Conclusion	145
	References	145
CHAPTER 6	Revisiting a classic: <i>Muscles, Reflexes, and Locomotion</i> by McMahon	149
	<i>Douglas A. Rowen, Aaron D. Likens and Nick Stergiou</i>	
	6.1 Introduction	149
	6.2 Fundamental muscle mechanics.....	150
	6.3 Muscle heat and fuel	157
	6.4 Contractile proteins	164
	6.5 Sliding movement: Huxley's model revisited.....	171
	6.6 Force development in the crossbridge	179
	6.7 Reflexes and motor control	181
	6.8 Neural control of locomotion.....	189
	6.9 Mechanisms of locomotion	198
	6.10 Effects of scale.....	205
	6.11 Conclusion	209
	References	210
	Further reading.....	224

CHAPTER 7	The basics of gait analysis.....	225
	<i>Luis M. Silva and Nick Stergiou</i>	
	7.1 Introduction	225
	7.2 The concept of skill.....	226
	7.3 The skill of gait.....	230
	7.4 Periods and phases of gait.....	232
	7.5 Spatiotemporal parameters of gait	235
	7.6 Determinants of gait	242
	7.7 Conclusions	245
	References	246
	Further reading.....	250
CHAPTER 8	Gait variability: a theoretical framework for gait analysis and biomechanics	251
	<i>James T. Cavanaugh and Nick Stergiou</i>	
	8.1 Introduction	251
	8.2 Conceptual approaches to gait variability.....	254
	8.3 Gait analysis and biomechanical measurements for gait variability.....	262
	8.4 Examples from clinical research.....	274
	8.5 Future directions.....	279
	References	280
CHAPTER 9	Coordination and control: a dynamical systems approach to the analysis of human gait.....	287
	<i>Aaron D. Likens and Nick Stergiou</i>	
	9.1 Introduction	287
	9.2 Hallmark properties of a dynamical system	288
	9.3 A dynamical systems approach to gait analysis.....	295
	9.4 Applications of relative phase dynamics to human gait	304
	9.5 Summary and concluding remarks	306
	References	307
CHAPTER 10	A tutorial on fractal analysis of human movements.....	313
	<i>Aaron D. Likens and Nick Stergiou</i>	
	10.1 Introduction	313
	10.2 Fractal theory and its connection to human movement.....	313
	10.3 Fractal analysis of time series data	323
	10.4 Applications to laboratory data.....	334
	10.5 Conclusion	339
	References	340

CHAPTER 11	Future directions in biomechanics: 3D printing.....	345
	<i>Jorge M. Zuniga and Nick Stergiou</i>	
	11.1 Introduction	345
	11.2 Lower extremity applications.....	346
	11.3 Upper extremity applications.....	350
	11.4 Methods for three-dimensional printing assistive devices	351
	11.5 Anatomical modeling for surgical planning	352
	11.6 Fracture casting.....	356
	11.7 Upper extremity three-dimensional printed exoskeleton for stroke patients	357
	11.8 Implementation of a three-dimensional printing research laboratory	360
	11.9 Current Food and Drug Administration recommendations of three-dimensional printed medical devices.....	362
	11.10 Limitations.....	367
	11.11 Future perspectives	369
	References	370
INDEX	375
