<b>Foreword</b>	<b>xi</b>
<b>Preface</b>	<b>xiii</b>
<b>Acknowledgements</b>	<b>xv</b>
<b>1 Financing the new energy economy</b>	<b>1</b>
The evolution of renewable energy	1
Renewable energy in the global energy economy	2
Financing a low carbon energy future	6
The role of project finance	7
Organization of this book	7
<b>2 Public policy mechanisms to support renewable energy</b>	<b>9</b>
Support renewable energy or tax conventional energy?	9
Direct subsidies	14
Quantity-based mechanisms	15
Price-based mechanisms	18
Impact of public policies on renewable energy finance	18
<b>3 Basic project finance concepts</b>	<b>21</b>
Project finance defined	21
Historical development of project finance	22
Comparing project finance with traditional corporate finance	24
<b>4 Modeling project cash flows and debt service</b>	<b>31</b>
Modeling project cash flows	31
Debt sizing for a fully contracted project	35
<b>5 Renewable project finance structures and risk allocation</b>	<b>55</b>
Basic project finance structure	55
Risk allocation	59
Assessment of project risks	60

<b>6</b>	<b>Tax structures for financing renewable energy projects in the U.S.</b>	<b>67</b>
	Overview of renewable energy tax incentives in the US	67
	Depreciation benefits	70
	Tax equity financing structures	71
	The partnership flip structure	77
	The sale/leaseback structure	92
	The inverted lease structure	95
	A critical assessment of tax credits as an incentive mechanism	96
<b>7</b>	<b>Financing distributed generation projects</b>	<b>99</b>
	Introduction to distributed generation	99
	Net metering	100
	Business models for distributed generation and financing structures	101
	Rooftop solar installations for commercial and industrial applications	113
<b>8</b>	<b>Renewable energy in power markets</b>	<b>115</b>
	Basics of power market design	116
	Transmission congestion and LMP	119
	Zonal markets in Europe and elsewhere	125
	Capacity and ancillary services markets	127
	The future of energy markets	129
<b>9</b>	<b>Managing transmission costs and risks for renewable projects</b>	<b>131</b>
	Connecting new generation projects to the grid	131
	Continuing transmission costs	133
<b>10</b>	<b>Alternative off-take strategies and managing merchant risks</b>	<b>141</b>
	Corporate PPAs	141
	Commodity hedges	144
	The proxy revenue swap	151
	Comparing project off-take options	155
	Quantifying and managing merchant price risk exposures	155
	Approaches to developing merchant price forecasts	157
<b>11</b>	<b>Project development and valuation</b>	<b>161</b>
	The renewable energy project lifecycle	161
	Valuation of renewable energy companies	167
<b>12</b>	<b>Energy storage financing: opportunities and challenges</b>	<b>177</b>
	Types of energy storage	177
	Value of storage	178

<b>13</b>	<b>Renewable energy finance in the international context</b>	<b>185</b>
	Recent global experience in private renewables finance	185
	Chile	188
	India	192
	Germany	198
	China	205
	Lessons from the international experience	207
	Appendix A: glossary of terms and energy units	211
	Appendix B: Levelized Cost of Electricity	214
	Glossary	218
	<b>Appendix C: Sample term sheets</b>	<b>221</b>
	1. Construction loan term sheet for a utility-scale wind project	223
	2. Tax equity term sheet for a utility-scale solar project	235
	3. Back leverage term sheet for a portfolio of residential solar projects	247
	4. Sample confirm for a commodities hedge for a utility-scale wind project	263
